N3CVJ wrote:
>Threat? What threat? Oh I forgot, you view

>every encounter through the lens of paranoia..
The thread was titled "OT ping Jim". anyone is free to peruse it, but then again, most have recognized you for what you are by now and realize you are lying again. But what the heck,,,let us revisit this thread..

>I did offer to have a face-to face with you,

You claimed you were coming to this state to give me my "chance", yet as bizarre as that claim, never once offered what you meant by "chance".

>A chance to meet face to face and maybe

>come to some sort of mutual understanding.

Regarding which of your obsessions?

>you read anything more into that, it is yet

>another example of your paranoia.

You are the one (again) seeking "understanding".

>which you conveniently weaseled out of.

That isn't what happened at all. In fact, the very last word on the subject was when you were cornered with no where to run.

>Cornered? You mean by insisting on my

>giving you my credit card number?

Pay attention. That wasn't the last word at all on the subject. For the second time, the exchange I presented was the last word on the subject prior to you abandoning it, but your repeated and intense need to tell

it another way, has been duly noted.

>Sorry, but as open and up front as I am on this
>group, I'm not going to give you that.

>You're delusional (no surprise there).

Pay attention. You are the one incorrectly invoking your credit card
topic as the last word, when the last word was you running from an
option of which there was no escape. Repeating a false statement will
not lend truth to it, but you are welcome to continue with such
behavior.

>You

>refused to meet and wanted me to give you

>my credit card number before you would

>consider going any further.

Oh, but I am enjoying this.

>I'm sure you are, as distorted as reality tends

>to be for you.

If you mention your credit card a few more times, it still will not
change the fact that it was not the last exchange on the matter, is not
a topic and has no relation to the last exchange.

>We could have met in any number of public

>places but you refused to deal. The truth is

>you don't want to risk the loss of even one part
>of your anonymity. I, on the other hand, have

>nothing to hide.

>If I wanted to do "something" less than

>honorable, I could have come to you without

>your knowing

You could not. You are capable of no such feat.

> and found out what I wanted to. But that's not

>what I wanted.

Alright,,let's illustrate your lies again for the masses,,, Faced with
no other manner in which to run, you dropped the matter
after this last exchange on Oct 4th, 2004.

>Well sure I dropped it, I was on the plane

>south shortly after. There was no point in

>revisiting the subject once the window of

>opportunity closed.

The opportunity was not closed, as illustrated by your posts dated the same day the opportunity was presented to you.
You were going on about with excuses, and after realizing that you had a very real chance to quench *your* stated desire to meet me, you dropped the topic.

>By giving you my credit card number? Sorry,

>not happening.

Your credit card was not a topic in the last exchange concerning your quest, nor is it now. Your credit card was never a topic in our last exchange, of which you have been adequately and gently reminded. Failure to realize is your communication deficit.

Excerpt from original message in Oct, last word on subject:

>looking.

I have that covered, too. A pic of the day's paper at the dockmaster's office where his clock (way up high) is very visible for all to see.
You have no excuse.

_
>What pic? Where?

I diligently refer you your own words: "There is no point in revisiting the matter once the window of opportunity is closed."
In any event, THAT was the last exchange of the matter, despite your sordid attempts at claiming otherwise. It ended your quest on the matter.

-
Hey my man, have a great weekend,,the mullet is almost all done and smoked and I'm heading north bound US 301 to J-town. Good luck to your Iggles,,,they're gonna get their heads ripped off.

>A 3 point loss is hardly "getting their heads

>ripped off".

They got what they deserved and I am proud Florida was able to play a part in denying Philadelphia.

> I am disappointed though.

I'll bet.

Damn, Dave...you are suffering like never before. Twas yourself that invoked other hammies with imaginary support, not I.

>I never mentioned any hams.

You did, invariably. I see we will have to rely on the group's memory and pc skills and not yours, again.

> You are the one who wants to know how

>many hams agree with the notion that roger

>beeps are illegal on CB.

I said nothing of the sort. In fact, I will reiterate it once again for you, so as the others won't have to. Your response to me led to *you* invoking other hammies. I said, and I quote, that "you are alone in your claim that roger beeps are illegal."
In order to lend yourself a transparent but false veli of support, you claimed, in response, "No, I am NOT the only one", whcih has only one meaning in response to my claim. Your claim, means that other hammies support your claim and agree with you, the exact opposite of what I claimed, maintain, and brought to your attention. Again, and for the record, I maintain NO other hammie agrees with you. You said you were

not the only one, I asked you to name one that agreed with you, and you began to sputter and sink.

>So, I suggested that you ask them.

What you have been claiming isn't what has been taking place at all. In fact, your last few posts are chock full of delusions and falacies. Is everything ok over there? Perhaps the stress of having to sell the overpriced boat is too much for you to handle these days. It's resulting in you not only making false accusations, but lobbying and begging for some type validity.
It's almost as if you view others in the world as subscribing to your one-size-fits-all and
if-I-say-over-and-over-I-can-make-myself-believe-it theories.
Your self-professed adept psychological skills diagnosing usenet participants, based only on the parameters you are given, notwithstanding.

>Talking DX on the CB and on illegal channels

>is against federal law. That is a fact.

(And yet it's so easy and fun. I do it all the time..bust me, Dave.)

>I have no problem with anyone who does it.

Sure you do. You take the non-hammie approach, the non-elmer
approach,,the anti-amateur creed approach.

>And I suppose the "elmer", "ham" approach is

>to openly condone illegal

>activity?

I have always maintained an incredible irony is a small percentage of
those licensed in communications know the least about it. You epitomize
the example. One certainly can not practice the hammie creed when one is
unable to define it.

_
You ignorantly and
erroneously call people criminals for dxing merely beacuse you are
unable to distinguish between a civil and criminal nature.

>Call it "shock value".

If the shoe fits,,,,,I call it what it is,,,ignorance.

> Too many people break the law, and then

>trivialize it, in order to appease their

>conscience.

Then perhaps you should address the problem and not the symptom...you
know Dave, become proactive instead of reactive.

>You are a perfect example of this by

>relentlessly arguing the semantics of the

>situation, as if it really matters on the grand

>scale who you have to pay the fine to.

Now that's priceless. You can get not one person in this group to agree with you that it is who brings up the law in regards to cb radio. You are really making some incredibly stupid claims, even by your normal lying standards which for the most part, we have accepted of you, Dave. But hell, now you really are desperate. What the hell happened up there? Philthy loss to much for you to handle?

>The point is that you are breaking federal law.

If that's your point, accusing me of bringin it up really has you confounded. But let's try and keep you focused for a second,,,,,speeding past 70 MPH is also "breaking federal law",,an analogy that has you writhing about.

>You live in denial.

Firstly, the only criteria you cited as your reason for calling one a "federal criminal", was "it was a rule enacted by the feds, so breaking it is a federal crime and makes one a federal criminal".

>The FCC rules clearly provide both civil and

>criminal penalties for rule violations depending
>on the circumstances involved.

Same for speeding.

>The potential

>is there for criminal penalties.

Same for speeding,

>I never said that in 100% of the case, this will

>happen and, in fact, I acknowledged that you

>stand a good chance of never being caught.

Same can be said with the comparison to speeding,

>But despite the fact that you have never been

>caught does not negate the truth of your

>commission of illegal actions in violation of

>federal law.

No one ever argued with you that such acts were illegal. You are roaming. Try and remain in topic.
  The manner in which you arrived at this
decision, was referred by yourself as
"progressive logic". This too, was decimated as you were reminded that

the 70 mph speed limit also met your criteria. Changing your values in mid-argument, you now invoke that the penalty one receives is now your new criteria.

>Once again, the 70 MPH speed limit thing was
>not mine.

>I never brought that up. In fact I was unaware

>that there was a federally mandated 70 MPH

>speed limit.

See what you can learn when forced..

> The last I heard the 55 MPH limit was

>dropped and a few states (Montana I believe

>was one) actually had no speed limit on some

>highways. The increase in accident rate then

>forced them to impose a state mandated limit.

What the hell does Montana have to do with the federal 70 MPH law?
LMAO,,,,damn Dave,,,you're a barrel of fun today.

>But assuming you are correct

Too lazy to ascertain it for yourself in addition to not even being aware of it,,,,well,,,,off you go, now.

>and that there is

>a federally mandated 70 MPH speed limit, it's

>not the same thing as the FCC rules. For one

>thing there are no "federal speed police" who

>will cite you for a violation of a federal law.

Oh, I see. Let me get this right,,first you invoked, as your criteria for calling one who dxes ,a "federal criminal"....."It was a rule enacted by the feds, so it is federal law , and breaking it makes one a federal criminal"
That was debunked with the speeding analogy.
You then invoked, only upon defeat, the penalties one may receive, as your second and newly found criteria for holding one a "federal criminal" for dxing. Now, having been educated that criminal penalties can apply to speeding, you are invoking yet a third set of criterias for your position, claiming the ENFORCERS are the actual litmus test for which you maintain dxers are "federal criminals".
Amazing.
Absolutley astounding.

>Speeding laws are enforced on a state or local
>level, and are treated as summary offenses.

More educatiion and to borrow one of your invocations........."i didn't say in 100% of all cases"....point being,,,,speeding cases can, and do, carry criminal penalties, dependent, as you say, on the circumstances.

>Radio law (The communications act of 1934 et
>al.) grants the FCC the power to enforce these
>laws on a federal level,

And the states can also enforce these laws.

> and can certainly impose criminal fines and

>jail time for the most flagrant rule violators.

More for your gray matter: Federal LEOS also may enforce ANY violation of domestic US law, including speeding, if they so chose.

>People who have refused to allow FCC agents
>to inspect their stations, those who have

>refused to respond to NAL's, those who

>continued to operate illegally after being

>warned, know all too well what those stiff

>penalties incur.

Heck, even when you were educated by other hammies on here regarding your ignorance claiming "roger beeps are illegal" you chose not to learn.

>I am putting this issue to rest one can for all. I

>have written to the FCC for a definitive ruling

>on this subject. If they tell me it's ok, I'll eat my
>crow and tip my hat in your direction and it'll

>be the last time I'll bring up that subject.

I would advise that, as opposed to you embrassing yourself in front of the hammie community and claiming they are illegal because you are unable to find a rule by the FCC permitting them, as you have maintained for your illogical reasoning.

>That's the really funny part about this whole

>thing. Twist will sit here and spin and

>obfuscate and make all sort of excuses to

>deny that what he (and you I guess) does is

>illegal.

>But the law is clear on this.

Everyone is clear on the law but you.

>Yes, you clearly disregard it.

You have no clue about the law,
Dave. You illustrate it with your position on roger beeps and you
solidified it when you claimed you used forensics in your argument.

>I never claimed that I used "forensics" in my

>argument. I stated once that my process was

>similar to the process used by forensic

>criminalists when they do their job. That's a

>whole different context.

And had no relation to what you were trying to say, yet you erred and
claimed it did. Tell us, Dave, how is your "process" legally related?

_
You
were to look up the term and learn its definition prior to using it in
the futire so as not to embarrass yourself again.

>There is nothing wrong with the context in

>which I used the term.

See above.

>David T. Hall Jr.

I can't wait for dayton this year. When those no good hammie cocksuckers try to buy my 10 meter and amps for cheap I'm going to slap their queer, gay asses back to their local repeater!

I may even drag a couple of hammie's into my booth and shove my massive man stick up their man-puss! Its going to be a hoot!

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our past, present and future sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins.

After Jesus died He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Holy Bible very clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed
God to save you. Welcome to the family of God.

Have a great day!

I'm looking to buy a linear for 10 / 11 meters that will
be both new and run without stress at 80 watts - long term.

I am interested in advice and also, any parts that should
be replaced (diodes, resistors, capcitors, etc) to make
it a better performer and clear (reduced splatter).

Anyone ?

Wrong. I hate our Prime Minister, the garden gnome Johhny Howard and his Liberal Party mates, that doesn't mean I hate Australians, my fellow countrymen. My Dad knows I hate Johnny Howard and he hates the Labor politicians. Do I hate my Dad? No, we are good mates.

Likewise, the US government sucks, not the ordinary citizens of the US. The US Government is not the ordinary people as you think, they are bloody politicans for christs sake.

See, we don't worship our politicans like you lot in the US. Watching the recent US elections and ours at the same time, yours was a like a rock concert tour across the country, our's saw the PM travel the country, get egged, spat on, punched and was followed everywhere by a guy in a chicken suit giving him crap, the National News played this daily at 6pm-what a laugh . Only the guy that punched the PM was fined $500. (I bet if you did that to Bush the SS would kill you!)

You Yanks have so much respect for the President that you follow him like a herd of sheep. If our PM put on a show like you guys have during your elections no-one would turn up and we would in fact be very pissed off at the money being wasted for a stupid show. Next Australian election I suggest you tune in and see how we treat politicians and the PM.

You lot go out and 'campaign' for your preffered party, we just turn up and vote, sometimes.

Here's my example: Richie Cunningham (Ron Howard) went campaigning in "Happy Days" for I forget which party, but the one his Dad didn't like. He was a school kid campaigning for a political party and had all these people helping him.

If I did what Richie did (and what many of you seem to do) my peers would steal all the flyers, give me a heap of crap and ask me why I am helping a politician and wasting my time.

We don't have rock concerts and all this other b/s for politicians. Problem is you guys worship bloody politicians as if they were god.

After all, it's the government, not really the people, who make these dumb arse decisions.

Sooner you realise that bloody politicians are the scum of the earth (much worse than anyone on the www) the better.

Visit Down Under and try and tell an Aussie that politicians and the people of the country are the same.

it's
> > caused more allied deaths than anything else, terrosits included, since
> > 1901.
>
>
> the american gov is the people. you hate the gov you therefore hate the
people. doesn't work both ways (only if your a yank who thinks the President
deserves respect!)

That's like saying I hate our troops for being Iraq. They didn't send themselves there, our PM sent them. Hence the reason, when we agreed to go to Iraq, the PM addressed the nation with "I am sending troops to Iraq to support the US. If you have a problem with this, do not take it up with the troops, come to my residence and take it up with me" (BTW several people did turn up at his front door and protest, they weren't arrested and allowed to stay)

(No wonder Iraq is a disaster, you hate Saddam, which means by your logic you hate Iraqi's too, so why are you there liberating people you hate? No wonder you keep killing innocent civillians, they're Iraqi's, so because you hated Saddam, you must hate Iraqi's too!)

Only in the freakin US of A is Ashley a girl's name.

In proper English
Ashley (UK, NZ, Aus,) is a boy's name
Ashleigh (UK, NZ, Aus) is a girl's name.

Kiss your Mum goodnight, switch to the metric system, spell words like metre, centre in proper Oxford Dictionary English.

And as for Down Under being the US's lap dog let's see into the future.

During the Cold War it was Russia (thank Christ) who kept the US in check and 'balanced the power' (Ie if it was still the Cold War and Russia said to the 'US' don't go to Iraq they wouldn't have!, nor would they be holding illegally innocent people in Cuba)
China is growing faster than any country ever has before and at a phenomal rate. It is supplying books, pcs for every child, building faster than any of us ever have. (It is also the only country where Amateur Radio is growing, fast)
The European Union is growing too, though not as quick though.

In a few years, you'll have China, Japan and all of Asia in the Asean Trading Network, which Australia will be a part of.
You'll have the EU as the other super-power, with Russia joining either the EU or ASEAN groups, the US will be all alone, hung out to dry.

America will NOT BE WELCOME by these groups and will be left out on it's own. Most Australians recognize our future lies in Asia (esp SE Asia) and not in the US. Most of us are sick to death of being Americanised, and most things do, over time, turn 'full circle'

From the Roman Empire to the British Empire, to the Third Reiech, hasn't history showed you that super powers always collapse in to a heap and are left out all alone to rebuild. (Ooops, I forgot that Yanks only study history of thier own country and wouldn't know much about the rest of the world if it fell on thier heads)

And yes, I know our history, your history and some world history. I know whom Lincoln, Washington and other presidents where. I know the date of President's Day .How many Australian PM's can you name? When is Australia Day?

Realise Yanks, before it's too late that China will become (it almost has already) the most powerful nation on earth. (Not bad for "Communists" hey!)

May I suggest instead of watching TV and domestic radio you switch on a SW receiver and listen to China Radio International & Voice of Moscow. Then you'll see how stuffed the US in the future.

better just to get a radio designed for 10 meters that can do 100 watts.
those amps tend to be very unclean (spectrum splatter machines). as for 11
meters, 4 watts RMS/12 watts PEP is the rule.

OK, you're a diplomat too. You are also part of your own
foreign ministry, so that's how you know so much about
how USSR and United States ran their respected governments.
It must be that clairvoyant abilities again.

All with a very strict political and repressive doctrine, but of
course you knew that being in the foreign ministry.

> The European Union is growing too, though not as quick though.
>
> In a few years, you'll have China, Japan and all of Asia in the Asean
> Trading Network, which Australia will be a part of.
> You'll have the EU as the other super-power, with Russia joining either

I didn't know we were trying to colonize Australia? I'll
have to right my congressman and inquire about it.

>
> From the Roman Empire to the British Empire, to the Third Reiech, hasn't

Darn, I guess you're still a little bitter about starting out
as a penal colony? Sorry that you carry that chip on your shoulder.

>
> And yes, I know our history, your history and some world history.

From the way you talk, I figured you knew about ALL the
world history, my bad.

> I know
> whom Lincoln, Washington and other presidents where. I know the date of
> President's Day .How many Australian PM's can you name? When is Australia
> Day?
>

Don't know, got me there. How many Canadian PM's can
you name? Who was British PM when WWII broke out?

Who was the first man to step on the moon?, What
were the names of the fellows who made the first powered
airplane flight? Who was the first person to fly from
New York to Paris non-stop? What were the names of
the two Pilots who flew around the world non-stop?
Who coined the phrase E= MC2?

> Realise Yanks, before it's too late that China will become (it almost has
> already) the most powerful nation on earth. (Not bad for "Communists"
> hey!)
>
> May I suggest instead of watching TV and domestic radio you switch on a SW
> receiver and listen to China Radio International & Voice of Moscow. Then
> you'll see how stuffed the US in the future.

I see you have, pity. I don't watch to much TV, usually listen
to NPR and love to listen to the BBC.

The best part about most people in the world, no matter what country they
are from, what their political affiliations are, they are not as stuffy or
ignorant as you.

Now go ahead and flame away..... Plonk!

She's right, we must have hated the French when we liberated them
from the Germans. We must have hated the
Belgians when we liberated them from the Germans. We must have hated the
Germans when we liberated them from Adolph
Hitler. We must have hated the Chinese when we help liberate
them from the Japanese. We must have hated the Burmese when
we help liberate them from the Japanese. We must have hated
the Japanese when we liberated them from General Tojo and
the other war minister that help start WWII.
We must have hated the South Koreans when we helped
liberate their half of the country from the Chinese, Russians
& North Koreans. How about the Granada? Panama?
Afghanistan? We must have hated those people too.

Landshark

--
Some of them are living an illusion
Bounded by the darkness of their minds,
In their eyes it's nation against nation,
With racial pride, sad hearts they hide,
Thinking only of themselves,
They shun the light,
They think they're right
Living in the empty shells.

hey steve
goes okay
I guess you do not wanna speak to me anymore.
is okay.
i don't kick ass.
my early years, 4 and 5, i hid inside of cupboards not to be beaten, by my
dad.
as far as powerless goes. uniquie is ok.

kiss ass
well kissed every one of daddies bar buddies cocks.
did not know why
BUT i learned to know that zeros were nothing to do witrh my life.
.
unfortunately my brother commited suicide
NEVER ASK A QUESTION,
YOU CANNOT STAND THE ANSWER

long life to you
away from me

Will do. I'll ask the locals once I buy as to the
internals that should be replaced for better performance.
Thanks

Yep, but I need a little extra when camping in the
Adirondack Mountains. Cell phones are useless and
I can't hit any 2M repeaters.

2393. would you like to participate in research concerning aggression on the internet?

Newsgroup: rec.radio.cb

I would appreciate it very much if you can take the time to complete
my questionnaire.

This questionnaire is seeking to establish aggressiveness levels in
individuals on the internet. The study is being carried out as part
of an undergraduate research project, and will be published in a
dissertation.

The information you give in this questionnaire will not be given to
any other individuals or organisations. The answers you give will be
kept strictly confidential and your identity will be kept anonymous.
None of the information you give will be identifiable in the final
report. If you decide at any point you do not wish to continue as
part of this investigation you may withdraw and the information you
have given will be destroyed. You may leave any question(s) blank if
you so wish.
If you have any queries regarding this project, please do not hesitate
to contact me at researcher.aggression@gmail.com

Thank you for you help.
Click on this link to access the Questionnaire

Good News!

Do you know how simple it is to go to Heaven after this
life has ended?

The good news is that God came from Heaven to earth
in the person of Jesus Christ over 2000 years ago and
died for our past, present and future sins(misdeeds).
He was born in the land of Israel supernaturally to a
virgin Jewish woman named Mary. He lived a sinless life
for thirty-three years and then sacrificed His sinless
blood and died on a cross to pay the death penalty for
our sins.

After Jesus died He rose from the dead three days later
as He said He would. The Holy Bible also tells us that
Jesus Christ ascended into Heaven and that all who accept
Him as their Lord and Saviour will live forever with Him
in Heaven where there is no more death, sorrow, sickness
and pain.

The Holy Bible very clearly explains how simple it is
to be saved and on your way to Heaven, "For if you
confess with your mouth, "Jesus is Lord," and believe
in your heart that God raised him from the dead, you
WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if
you will open your heart to Jesus and pray the following
prayer:

Dear Jesus Christ, I want to be saved so that I can have
a home in Heaven when I die. I agree with You that I am a
sinner. I believe You love me and want to save me. I
believe that You bled and died on the cross to pay the
penalty for my sins. I believe that You rose from the dead.
Please forgive my sins and come into my heart and be my
Lord and Saviour. Thank You Lord Jesus Christ for
forgiving me and saving me through Your merciful grace.
Amen.

You are now a Christian if you said the prayer and allowed
God to save you. Welcome to the family of God.

If you decide to wait till later you may die before you get
another chance to be saved because none of us knows
exactly when we will die.

Have a great day!

2405. Quick and Easy Money

Newsgroup: rec.radio.cb
Date: 2005-02-09 22:39:32 UTC
From: brovsky@gmail.com
Message-ID: <1107988772.074088.183810@z14g2000cwz.googlegroups.com>
Source record: 196045

Try this out, it works!!!!
Turn $10 into $10,000 with PayPal..Easy & Quick
PLEASE TAKE A MOMENT TO READ THIS INFORMATION. THIS REALLY WORKS!!!
" I WAS SHOCKED WHEN I SAW HOW MUCH MONEY CAME FLOODING INTO MY PAYPAL ACCOUNT." -Mark 2004
Dear Friend,
This is a new program as you will see. It can be for the U.S. Canada, S.E Asia or the U.K. This is a fantastic opportunity, try it for yourself!! EVERYTHING DONE ONLINE! With just $10 or £5 and a Paypal PREMIER or BUSINESS account, you could make $$Thousands$$ in 2 SIMPLE STEPS!
GUARANTEED - you will have $10,000 in two weeks. Only $10, a Paypal PREMIER or BUSINESS account and 30 mins. are all that is needed to get this going. If you want to make a few thousand dollars real quick, then PLEASE take a moment to read and understand the MLM program I´m sharing with you.
NO IT´S NOT what you think. YOU DON´T have to send $10 to five or six people to buy a report, receipt or get on their mailing list. Nor will you need to invest more money later to get things going. THIS IS THE FASTEST, EASIEST PROGRAM EVER! You will be able to complete it in LESS THAN 30 MINUTES and you will NEVER
FORGET THE DAY YOU FIRST VIEWED THIS ONLINE.
If you´re already running a home business, you can easily do this one along with it. If not, this is the FASTEST and EASIEST way to earn serious money online that you´ve ever seen so far in the history of the Internet! This
program works no matter what country you are in, or what currency you use. It doesn´t matter how old or how young you are. And you certainly won´t need any special knowledge or talent. You won´t need to run a website, or make phone calls, or make photocopies, or send out letters through the mail, or pay for advertising, etc. The only things you will need are: * An email address
* A Premier or Business PayPal account with at least $10 deposited in it
* 30 minutes of your time
ONLY 2 SIMPLE AND EASY STEPS ! !
If you are doing other programs, by all means stay with them. The more the merrier, BUT PLEASE READ ON!! First of all, there are only TWO POSITIONS, not four, five or six like many other programs. This program is more
realistic and much, MUCH FASTER. Because it is so easy, the response rate for this program is VERY HIGH and VERY FAST, and you will receive your reward in FOURTEEN DAYS. That´s only TWO WEEKS! Not one or two months. Just in time for next month's BILLS.

TRUE STORY -- Grace Kelly tells how she ran this gifting summation four times last year. The first time, she received $6,000 in cash in two weeks and then $14,000 in cash the next three times.

THIS CAN AND WILL WORK FOR YOU! HERE ARE THE DETAILS:
Post this letter in 50 message boards, chat rooms, or newsgroup. You don´t need to post 200 like other programs or email 100 people just to get started. Even if you are already in a program like the send twenty dollars to six people. CONTINUE IT and stay with it, THOSE DO PAY OUT, but do yourself a favor, DO THIS ONE TODAY as well, RIGHT NOW!!! It is simple and takes a very small investment, only $10 and a Paypal PREMIER or BUSINESS account. IT WORKS AND IS DONE IN 2 SIMPLE AND EASY STEPS ! ! This program WILL PAY FASTER before the other programs you are working on even trickle in!! Follow the simple instructions and in two weeks, you should have $10,000 because most PEOPLE WILL RESPOND due to the LOW ONE TIME INVESTMENT, SPEED AND HIGH PROFIT POTENTIAL, PLUS, since its done all ONLINE, there is no time wasted mailing out letters and the such!!! We are not even figuring a 50% response! So let´s all keep it going and help each other in these tough times. We all owe money to bill collectors, and creditors. But, with this, if people take the time to help each other, the good fortune will follow. SO, Take the measly minutes this SIMPLE
and REWARDING program offers and give the gift that gives back TODAY!!!
HERE´S WHAT YOU NEED TO DO...
STEP 1 Ok, if you´re not already a PayPal user,
the very first thing you need to do is use the PayPal link below and SIGN UP. It takes just two minutes! Here´s the URL. Just click on the PayPal link below:
https://www.paypal.com/us/cgi-bin/webscr?cmd=_registration-run
Be sure to use this link so you can sign up for a free PREMIER or BUSINESS account. You´ll need to have a PREMIER or BUSINESS account (and not a PERSONAL account) otherwise you won´t be able to receive credit card payments from other people.
STEP 2
It is an undeniable law of the universe that we must first give in order to receive. So the first thing to do when you have your Premier/Business PayPal account is to IMMEDIATELY send a $10 payment from your PayPal account
to the person at POSITION #1, if... -- your
birthday is BETWEEN JAN 1 THRU JUNE 30, OR, if...
-- your birthday is BETWEEN JULY 1 THRU DEC 31, send the
gift to the person at POSITION # 2,
along with a note saying: "HERE IS A $10 GIFT FOR YOU." Be certain to add this note, as this is what KEEPS THIS PROGRAM LEGAL. Instructions on how to send a payment are under "SEND MONEY" at the Paypal Site.
It´s so Easy!!!
When you send your $10 payment to the first address in the list, do it with a great big smile on your face because "as you sow, so shall you reap!" When this program is continued, as it should be, EVERYONE PROFITS!!

DON´T BE AFRAID to send gifts to strangers. It will come back to you ten folds. A person can give you up to $10,000 per year and you don´t have to report it to the IRS!

Here are the current positions:
* POSITION#1 --- nxbrennan@hotmail.com
* POSITION#2 --- executioner_2k@yahoo.com

After you have transferred a $10 payment to the email address, something very eerie happens. It gives you an indescribable, overwhelming sense of certainty, belief and conviction in the system. You´ve just proved to yourself
that, because you have done it, there must be a great number of other people ready to do exactly the same. Thus you have now seen for yourself, first hand, that this business actually works!
REMOVE the email address you are
replacing (the one you sent $10 to), and REPLACE it with your own email address.
REMEMBER: Use the same EMAIL ADDRESS that is used with YOUR Paypal account !!!
Paste your newly typed email address over the old
one and then post to 50 Message Boards, Chat Rooms, or Newsgroups.
DON´T MULL OVER IT, JUST 30 MIN OF YOUR TIME, THAT´S IT THERE IS NO MORE TO DO!! ACT FAST AND GET THE GIFT. HONESTLY AND INTEGRITY MAKE THIS PLAN WORK!! DO TO OTHERS AS YOU WOULD HAVE THEM DO TO YOU. YOUR NAME COULD CYCLE FOR A LONG TIME ! ! THIS MAKES IT THE GIFT THAT KEEPS ON GIVING.
This is excellent seed money to start or expand a business, buy your dream home, car, and pay off what ever bills you may have.
Good luck and God Bless. Play fairly, Good fortune will follow.
WHY THIS PROGRAM WORKS:
!! HONESTY AND INTEGRITY !!
Straight to the point, the reason this program is SO SUCCESSFUL is because when you follow these instructions EXACTLY = GIVE A $10 GIFT and POST this in 50 different message boards, there are only TWO outcomes.
(1) A persons birthday will fall on the same half as yours, therefore, YOU GET THE $10...
OR,
(2) a persons birthday will fall on the other half of the timeline, therefore, YOU STAY IN YOUR POSITION and
get posted in 50 other MESSAGE BOARDS, etc...
BOTTOMLINE: Either you get the $10 or your name gets passed on for other people to give YOU $10 or pass YOUR name on to other people that will. It makes you think though, the more you POST YOUR OWN POSTS, the BETTER the results!!!
4 FACTORS THAT MAKE THIS PROGRAM SO SUCCESSFUL...
* EXTREMELY FAST RESPONSE
* EXTREMELY HIGH RESPONSE RATE
* UNLIMITED PROFIT POTENTIAL
* QUICK, SIMPLE AND CHEAP TO GET STARTED

So there it is. You now have the knowledge that will enable you to make over $10,000 within the next two weeks. The only thing that can hold you back now is a lack of faith or a lack of self-belief. However, any doubts you may
currently have will disappear within a few days of putting this plan into practice. Trust me on this! You certainly won´t regret it.
SOME NOTES FROM PAYPAL WHICH YOU MAY FIND USEFUL:
PayPal lets you pay anyone with an email address and is the world´s Number 1 online payment service. PayPal is accepted on over 3 million eBay auctions as well as a countless number of online shops. You can also use PayPal to pay your friends - for example, it´s a convenient way to split the phone bill with your room-mate, send cash to your kids in college, or send cash to someone in another country. Better yet, you can also earn a referral bonus of up to $100 each time someone signs up for a PayPal account using your referral URL! When you send money through PayPal, you can fund your payments with your credit card or checking account. You won´t have to worry about your privacy, because PayPal keeps your accounting information safe and secure. Making a purchase
with PayPal is far more secure than mailing a check or giving your credit card number to a stranger. That´s why over 9 MILLION people from around the world use PayPal to move money. Signing up for a PayPal account is free, easy, and it takes only a couple of minutes.
Thank you, and good luck in your ventures.

Hey SecOps:

This is: REC.RADIO.CB (steveo)

Do you have ANY idea how sexy you are when you jump on "landshark" the way you did??

You sound like a very sexy man! R U interested in a little Man-to-Man cyber action? Maybe live hook-up?? Would you like to join the Medina gay CB club???

Tell me about yourself! Are U a top or a bottom?? Cut or UnCut??

I figured you must be into it since you posted in ALT.PERSONALS.GAY

Thats our other group. You'll have a better chance of finding hot action in REC.RADIO.CB

Landshark is OK but he's a slut. Thats OK, it just depends on the type of action you're looking for. WelCUM to our group.

73's and 88's (all over your body!)

Steveo

Good News!

Do you know how simple it is to go to Heaven after this
life has ended?

The good news is that God came from Heaven to earth
in the person of Jesus Christ over 2000 years ago and
died for our past, present and future sins(misdeeds).
He was born in the land of Israel supernaturally to a
virgin Jewish woman named Mary. He lived a sinless life
for thirty-three years and then sacrificed His sinless
blood and died on a cross to pay the death penalty for
our sins.

After Jesus died He rose from the dead three days later
as He said He would. The Holy Bible also tells us that
Jesus Christ ascended into Heaven and that all who accept
Him as their Lord and Saviour will live forever with Him
in Heaven where there is no more death, sorrow, sickness
and pain.

The Holy Bible very clearly explains how simple it is
to be saved and on your way to Heaven, "For if you
confess with your mouth, "Jesus is Lord," and believe
in your heart that God raised him from the dead, you
WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if
you will open your heart to Jesus and pray the following
prayer:

Dear Jesus Christ, I want to be saved so that I can have
a home in Heaven when I die. I agree with You that I am a
sinner. I believe You love me and want to save me. I
believe that You bled and died on the cross to pay the
penalty for my sins. I believe that You rose from the dead.
Please forgive my sins and come into my heart and be my
Lord and Saviour. Thank You Lord Jesus Christ for
forgiving me and saving me through Your merciful grace.
Amen.

You are now a Christian if you said the prayer and allowed
God to save you. Welcome to the family of God.

If you decide to wait till later you may die before you get
another chance to be saved because none of us knows
exactly when we will die.

Have a great day!

ashley i see you are a political minor in school. i dont know where you
get your information that the u.s. populace follows the president like a
herd of sheep. look at the figures of the popular vote and compare it to
the amount of eligble voters and you will see that he was not the 50% +1
who won.
i could give a rats ass how the people in oz treat their politico's but
if it means throwing shit at 'em is a standard response then have fun.
you use the word hate for your politicians. hitler used the same word.

want to reconsider?
quoting richie cunningham doesn't prove your point. he was an actor on a tv program from 30 years ago. if you base your political beliefs on something as benign as this then piss off...

It is "sound" only so far as you are able to exclude all other
possibilities -- which is, quite literally, impossible. If it -was-
possible then we would have proof of the existence (or nonexistence)
of God. We don't.

Once again, Doyle wrote fiction.

You have made two different arguments here. One is inductive and based upon probability; the other is deductive where the conclusion is an absolute (Doyle). Quit flip-flopping and make up your mind.

Again in contrast to your stated experience, I have rarely seen caps
in solid-state circuits deviate significantly from their rated
tolerance (unless there was a total failure). On the contrary, I
-have- seen such deviation much more frequently in high-voltage power
supplies. You call it "drying-out", I call it "aging" -- it amounts to
the same thing.

Hardly. The mechanisms behind our descriptions are different, and
your's neglected to address the heat generated by AC resistance in the
-good- cap. In fact, you denied AC resistance was even a factor. Yet
you just agreed above that it -is- a factor while making the excuse
that you "didn't use the term A.C." Another flip-flop.

>conflict.

In several posts you have demonstrated that you have a problem differentiating voltage and current. You should address that issue.

Now..... since you want to invoke semantics, I'll state this more clearly for you: A pure DC current has an AC component with a value of zero, and a pure AC current has a DC component with a value of zero.

Feel better?

>For the record, I agree with your second statement.

For the record, you agree with both statements. Whether you want to believe it or not, the definition of AC has changed so that it "encompasses a broader definition".

>a substantially reduced level.

Technically, it -is- a harmonic. The source of the fundamental frequency was acted upon by a non-linear function (rectification). The products of rectification are the harmonics of the fundamental. A frequency-multiplier circuit works on the very same principle, with the additional function of tuning the output to a specific harmonic.

Basics, Dave. Learn the basics.

>peaks. The higher the current draw of the supply, the more capacitance
>you need to filter it effectively.

Dave, can't you see that we're saying the same thing? The difference
is that your explanation is sourced from an education lacking in the
fundamental concepts of electronics.

A capacitor -does- store a charge, and the amount of that charge -is-
a function of it's capacitance. But it's ability to -accept- and
-deliver- that charge leaves a gaping hole in your explanation. As I
said before, the value in capacitance is -only one- factor of its AC
resistance -- i.e, its ability to "filter" AC from a DC current.

And for a better perspective, dust off your book on basic electronics
and look up the page that covers simple LC filters -- low-pass and
high-pass. Notice that a high-pass filter has the cap in series with
the source, while the cap in the low-pass filter is an AC -shunt-. Now
you have already admitted that a power supply cap is nothing more than
a component of a filter, and I think it's safe to conclude that you
meant a low-pass filter (since the intended output is DC). Now unless
you intend to argue that the capacitor in an LC low-pass filter does
-not- shunt AC to ground, you have once again shown that you don't
have a firm grasp of the basics. And if you -do- intend to argue that
point then I suggest you first read the chapter (as well as all
previous chapters in the book).

>>>> When
>>>>the load becomes large then so does the ripple, and if the cap has a

>There is still no A.C. If a voltage "swings" or "ripples" between +9V
>and +10V, it is still keeping the cap charged in the proper polarity.
>If the voltage swings negative, then you will have a problem, unless
>the cap is a non-polarized electrolytic, like the type commonly found
>in audio crossover circuits and other places.

You're stalling with semanitcs, but even -then- you are wrong. Say
your PS cap is charged to a DC voltage. When the power supply pulls
the ripple to it's peak then current is flowing -out- of the cap. When
the ripple bottoms out then current is flowing -into- the cap. You
have described the very same action at least twice. The problem is
that you didn't even know that AC stands for "Alternating CURRENT"!!!
The current is indeed alternating, even according to the obsolete
definition of AC.

LEARN THE BASICS, DAVE!!!

>>>>Just about everyone who has ever used a soldering iron thinks they can

>more basic than a power supply?

Oh, gee, I don't know..... How about:

A battery & a resistor;
Resistors in series and parallel;
An inductor in a DC and AC current;
Inductors in series and parallel;
An inductor with a saturable core;
A capacitor in a DC and AC current;
Capacitors in series and parallel;
A resistor and capacitor in series and parallel;
A resistor and inductor in series and parallel;
An inductor and capacitor in series and parallel;
A resistor, inductor & capacitor in various networks;
A current transformer;
A voltage transformer;
A power transformer;
Impedance transformation of a transformer;
A transformer with a resistive load;
A transformer with a reactive load.......

And I haven't even touched on semiconductors yet. Shall I continue
with this list?

>My tech school was a "hands-on" style of teaching. They could have
>bored everyone to tears by writing all sorts of math formulas on a
>chalk board and demonstrating how things were supposed to work. But it
>was much more rewarding and easier to relate to the circuits if we
>could actually see it work in real life.

If observation alone was sufficient for an education then anyone who
ever listened to the radio or watched a television would be an
engineer. That isn't the case. Those boring equations are technical
and mathematical descriptions of how electronic components and
circuits work in "real life". If you didn't learn these fundamental
concepts because electronic theory "bores you to tears" then you
probably shouldn't be discussing the subject with an EE who -did-
learn the basics (and in much more depth than they are covered in any
"tech school").

>>>> But the increased ripple can be caused by a

>But resistances and impedances in parallel tend to act like resistors
>in parallel, and the results are similar. The source impedance, in the
>case of a power supply is what is contained in the rectifiers. The
>transformer is pretty much isolated at this point.

Wrong, wrong, and even -more- wrong. First, an impedance is not only resistance but also -reactance-. Second, the power transformer is a source impedance with an inductive reactance that changes with the load. Third, the load can be (and frequently is) reactive to some extent. Fourth, the caps are -both- a source and load impedance, depending on which end you are looking at. Fifth, the rectifiers are nonlinear components but they -do- have a linear region (conduction) which passes impedances quite nicely, and in both directions......

Shall I continue with -this- list?

>>Also, the capacitance of an electrolytic isn't a
>>constant; it's non-linear with respect to the voltage (a factor of
>>it's AC resistance, and another reason why audiophiles prefer motor
>>caps over electrolytics).
>
>Well of course! Look at any R/C time constance charge/discharge cycle
>and it's not a straight line. As the cap reaches 70% of it's
>capacity, the charge rate slows.

Holy crap, Dave..... didn't they teach you -anything- in that "tech school"? The RC curve is the relationship between voltage and time, and assumes that both the resistance and capacitance are constants. What I said (and what you are ignoring) is that the capacitance of an electrolytic cap is -not- a constant. And because it is not a constant the RC curve does -not- follow the same path that it would if the capacitance -was- a constant. And BTW, the RC curve becomes a straight line when the current is constant because the charge rate of the cap is a fuction of current, not voltage. This is yet another example of your inability to distinguish current and voltage.

>> Both these nonlinearities end up converting

>complexity and then accuse me of not explaining it thoroughly enough.

You are once again confused. In your attempt to demonstrate that you
know what you are talking about you have ultimately proven that your
understanding is poor at best. THAT was my point, and THAT is what is
evident from your technical explanations. Maybe you think you can leaf
through a few textbooks, speed-read a few concepts, paraphrase them
and try to pass them off as if they were integrated into your
education. Well, you can't. I've been in the field long enough to
recognize that scam and it doesn't work. It didn't work for Skippy, it
didn't work for Toll, it didn't work for Eitner and it won't work for
you. But please don't stop trying because I find it very entertaining.

Not often in solid-state equipment, but they are still quite common in
high-voltage supplies, power coverters and line conditioners. In fact,
your microwave oven has a regulating transformer that works on the
same principle. Should I make a list for this subject, too?

>found. But if you can't pin down the cause of failure to any other
>component, you are left to consider that either the bad component
>failed on its own, or it was subjected to a momentary stress beyond
>its limits through some external event.

Actually, it was a design flaw. The diode was supposed to be thermally connected to the heatsink, but was mounted such that the thermal link was nothing more than a blob of heatsink grease. The grease dried out and the redidue became a very good insulator. Regardless, my point was that the failure is not always intrinsic to the circuit or device; many times the problem is caused by outside influences, such as improper operation or maintenance, poor design, manufacturing flaws, etc. And many of those faults are not always evident; i.e, they don't leave evidence of the cause of the failure. The fact is that there was no evidence of the cause of the failure in the Peavey. I learned of the cause after harassing Peavey tech support until they forked over the info (I really think they try to keep faults like that a secret because they make so much money on spare parts, but I suppose that's just one aspect of modern business practices).

>>So there are -many- possibilities that may or may -not- be obvious.
>
>I respectfully disagree. There ARE other possibilities yes, but I
>disagree that there are "many". A simple process of elimination will
>whittle that number down to a few highly probable possibilities.

A shorted resistor is not "highly probable", nor is a half-shorted double diode, a PCB trace with a hairline crack, an incorrect slug in an RF or IF transformer, etc. I can make a list here, too.

>>>The example I used was similar in method.
>>
>>
>>Gee, another excuse.
>
>A perfectly valid one.

You -still- haven't looked up the word. Shame.....

What you initially described is called 'failure analysis' (or 'crime scene analysis', as per your example). The term "forensic science" is, literally, the -presentation- of a scientific analysis.

>>>I have a battery charger which is unfiltered (the battery acts as the
>>>filter cap), which may serve the purpose nicely.

>>
>>
>>Go for it! Don't forget to use several different caps, measuring both
>>AC and DC volts across the cap, as well as the time it takes until
>>failure. Post the results.
>
>When I get a chance, I'll set it up. I need to find some high current
>resistors that can stand dissipating 20 amps or so.

What do you need resistors for? Just hook the puppies up! But if you
want a resistor anyway try an electric space heater or stove element.

>>>Why use a light bulb to do a zener's job?
>>
>>
>>The point was that the characteristics of a low-power device can be
>>amplified. And yes, a light bulb is sometimes preferable to a zener
>>because zeners are noisy little bastards.
>
>That shouldn't matter in a power supply.

Power supplies are not the only circuits that use regulators. And yes,
the noise of a zener is amplified by a power transistor along with
it's nonlinear characteristics, which can be bad if the supply is to
be used for low-noise applications.

>>>>A light bulb's resistance changes with temperature, but who said a

>will "glow" at a certain lightwave frequency at a given temperature.
>You adjust the filament to "blend in" to the background flame or heat
>source, and you can determine the temperature.

That's not what I described. I described a thermistor. Try reading it
again for content.

>What you have are 3 factors (Voltage, current and resistance). When
>you hold voltage constant, you can measure a change in temperature as
>a change in current.

Very good! That's all I was trying to say! Sheesh......

> But what if you increase the voltage? Will the
>bulb not increase current and therefore temperature?

Congratulations, you found the missing step!

>>>> IOW, the current density through a cross-section of filament
>>>>is the same regardless of it's thickness or length.
>>>
>>>A 12V bulb will have a thicker filament than a 120V bulb for the same
>>>given wattage. That's because the amount of current in a 12V bulb is
>>>10 times higher than the same wattage bulb in a 120 V configuration.
>>
>>
>>True, but the cross-sectional current density must be the same in
>>order to reach the same temperature where it emits the same spectrum.
>>So why would a thicker filament last longer?
>
>It's physically more durable. Less prone to shock damage.

I don't buy that simply because an auto bulb encounters much more
shock and vibration than most household lightbulbs. And UV bulbs have
a much thinner filament than a standard white bulb (to achieve a
higher temperature, and therefore a higher part of the spectrum), yet
they don't seem to burn out significantly faster. So your explanation
is still lacking any substance.

So A, C, D, E and G -can't- be used to fill in the blank?

> The
>syllogism stands as valid.

The syllogism itself is valid, as I already stated. The -truth- of the
-conclusion-, however, is undefined, which I stated in the rest of the
paragraph as follows:

>> The conclusion, therefore, is neither
>>true nor false; it can have no more truth than your assumed premise.
>>Just because I don't live at the North Pole doesn't mean I -must- live
>>at the South Pole. Or, for a better example, if you were to say that

Focus, Dave. Your conclusion is the result of an assumed premise.

>>> Therefore, by extension, it can be assumed that
>>>you then consider other components have a higher probability of
>>>failure.
>>
>>
>>Key word: "assumed". You assumed wrong, as is usually the case
>>whenever people ASSume things.

>
>What other possibilities are there? Other components either have a:
>
>A. Higher probability of failure.
>B. Lower probability of failure.
>C. The same probability of failure.

Earlier you stated that -only- the converse could be true and that
"there are no other possibilities in this case". Yet now you add a
third possibility (in direct contradiction to your first statement
which asserts that there are no other possibilities), and it is along
the same lines as the list of possibilities that I previously listed.
Aside from your obvious flip-flop, re-read your possibility C, then
compare it to the following statements:

"And after being in the electronics business
professionally for 30+ years I can say, without any doubt whatsoever,
that capacitor failure rate (i.e, the capacitor being the -primary-
cause of the failure) is no higher than for any other component."

"Cap failure as the -primary- cause of
failure is no more common than a weak transistor, bad IC, blown
diode/zener, or bad RF/IF can, or even poor manufacturing standards."

"I never
said that caps don't go bad. I said they aren't the primary cause of
failure any more than any other component."

Now what part or parts of those statements did you not understand? Did
you read them while wearing the same dirty eyeglasses you wore when
reading my statement saying that "I am not a liberal"? Or are you just
being bullheaded?

>>>>>>>More chest thumping? What you've done at HP has no bearing on what

>
>.5 mV won't even tickle the modulation in most radios. Certainly not
>enough to make 100%.

Geez Dave, can't you read? The spec was 0.5mV for -50%- modulation.
And yes, it will most definitely "tickle" the modulation because mine
is set just as described and it works dandy. BTW, your lack of both
experience and education is showing -- typical output of a dynamic
microphone just -begins- in the low microvolt range. We're talking
-60dB or less. The dynamic range of a human voice isn't that great,
barely 20dB, yet the dynamic range of CB AVC circuits (or AMC, AGC,
CVA, etc) can be anywhere from 40 to 60dB, which is such a wide range
for a number of reasons, not the least of which is the wide variety of
microphones, voices, and distances between the mics and the voices.

And 0.5mV is plenty for 50% mod, especially when the radio's mic
sensitivity is specified for 1.0mV minimum at 50% mod. I offered to
scan the page..... are you sure you don't want to see it? After all,
Uniden made these radios for radio shaft, so it was -Uniden- that
provided the information in the service manual. Not like Sams which
got their info from reverse engineering. So which manual do -you-
think is more likely to be accurate, Dave? Don't you think Occam's
Razor applies in this case? Or is this another case for Sherlock
Holmes?

>BTW, there is no "need" to bypass the LPF. It's just that the radio
>sounds better IMHO that way. The LPF overly restricts the audio

>into a paper cup, then fine. I admit that I'm somewhat of an audio
>purist. I like smooth "broadcast quality" audio. That's my personal
>preference. YMMV.

CB is not intended for high-fidelity. Passing the higher freqs widens
the bandwidth of the channel and makes it more likely to bleed into an
adjacent channel. That's one reason why CB mods are illegal.

Regardless, you can get improved sound with nothing more than a better mic. The stock microphones are usually designed for 300-3000Hz and are as flat as the Matterhorn. Plug an electret into the radio and the response flattens out, making it sound much better even -with- the LP filter. This should come as no suprise since 3000Hz is a pretty high frequency when compared to the human voice. Only Kate Bush could sing -that- high.

>> Higher drive at mid-modulation will push the audio into
>>compression earlier, which would easily account for your audio
>>sounding "mushy and compressed", just as you described.
>
>Yes it would. But that's not the reason in my case. What was that you
>tried to say before about acknowledging other possibilities?

Why should I? My audio sounds fine. I'm not the one with "mushy and compressed" audio. I'm not the one who uses a book with an error in the alignment procedures. And I'm not the one who felt the need to bypass the LP filter. I don't see any reason to even consider any other possibilities. If it works, don't fix it.

>> My radio
>>sounds just fine without the modification, so it's very likely that
>>-your- book is in error.
>
>There is no error in my book. It correlates with other radio alignment
>procedures.
>
>Perhaps your book is in error. You assume that because it came from
>Radio Crap, it's infallible.

Wrong. I never assumed any such thing. You mentioned the discrepancy so I referenced it's other specs, as well as specs from other radios. The only discrepancy is with -your- book. It stands alone in the modulation procedure you described. The question is, given how your own description of the audio is indicative of misalignment, and that I have a more authoritative reference that disputes yours, why do -you- assume that -your- book is correct?

>My procedure is similar to what other radios also prescribe. After
>all, there isn't much difference in the output that a given stock
>microphone presents.

Wrong. I have lots of mics that have widely different levels. And the useful dynamic range of any given mic can be 30 to nearly 100dB, depending on the type. That's why one mic will sound great on one radio but crappy on another, and vice-versa.

>The fact that your radio "sounds fine" is a matter of some
>subjectivity. I didn't say that the radios (Radio shack, Cobra and
>President versions of this chassis) that I've worked on sounded "bad",
>only that I felt that they sounded "better" with a modified LPF.
>Again, a matter of personal preference.

You said they sounded "mushy and compressed". That isn't bad? Geez Dave, how many times can you flip-flop in one post?

>> Not only that, I'm suprised that a person of
>>your self-proclaimed experience would not have suspected the error
>>earlier -- after all, your own description of the audio quality is
>>indicative of overmodulation.
>
>Not at all. 5 mV is hardly too much audio drive. Both the mike preamp
>compression circuits and the modulation AMC were working properly. The
>compressed sound was due to lousy audio bandwidth,

Or maybe it was due to a misalignment which caused a downward expansion in a region where a flat response is intended? Naw, that couldn't be it. You and your crystal ball must be right, Dave, it couldn't be anything else.

> coupled to a
>microphone (A D-104) which didn't mate well with the audio bandpass
>characteristic that this radio with the LPF presented.

D-104's suck. They have no low-end and the high-end is raspy. The output level of the unamplified models is too high for most radios, and the amplified models are usually turned up too high by the user. People like them because they are loud, but they are loud because of their high and narrow spectral response -- not a mic I would consider using for high-fidelity. Want a good mic? Try a Shure 522 -- a lot cheaper than a D-104 and sounds a lot better.

>> Yet you didn't bother to find a more
>>authoritative reference, or compare the calibration specification to
>>that of similar radios (I did, and 50% modulation at 0.5mV is common
>>for Uniden radios that come with the same mic).
>
>Funny, I took a quick look through a bunch of different test
>procedures for various radios. Audio input ranged from 5 mV
>(Considering the gain of that mike preamp circuit, that's not
>surprising), to 10, 20, 50, 70 and 100 mV, to set the AMC. In NONE of
>them was there ever a call for anything less than that.

Like I said, I can scan the page if you don't believe me. You can even ask Lance since I got the manual from him with the radio. BTW, have you ever seen a factory service manual? You know, one that wasn't published by Sams?

>>You could have also
>>compared the cal-spec the radio's rated mic sensitivity. But no, you
>>decided -not- to look for the primary cause of the problem, assumed
>>that the error was in the design and proceeded to chop the filter.
>
>Again, read my lips, there was NO "problem". This was a personal taste
>modification made to improve the overall audio fidelity. I assumed
>nothing, however you are doing more than enough assuming for both of

>us.

Let's put it this way: Have you heard the audio after aligning the
radio according to factory specs? I have, and it doesn't sound "mushy
and compressed" at all. And I've worked with professional audio
equipment for more than ten years at the station so I -do- know what
"mushy and compressed" sounds like. Gee, I wonder why -your- radios
sound that way but not mine.....

>>Dave, it's clear that in -both- electronics and politics you have a
>>real problem accepting any possibilities outside the realm of your own
>>prejudice.

>own radio just for fun when I was bored and had nothing else to do.

Wow! Over a hundred -versions- of that radio? I didn't even think
there were a hundred CB companies at the time the radio was made! So
you must really know your stuff, huh? But wait..... you don't even
have a factory manual for the radio. So everything you know about the
alignment of that radio is from where..... the Sams manual?

Hmmm.....

>I've designed controlled carrier modifications for it, FM receive and
>transmit, 10 meter conversions, Digital readout frequency selection,
>photocell LED and meter light dimmer circuits, wideband transmit and
>receive, and a host of other things that I've long forgotten about.
>Like I said, that chassis (in its various forms) has been one of my
>all time favorites for the sheer ease at which the radio modified and
>the overall capability of it.

I'll be impressed when you can design one from scratch. But that would
be superfluous, wouldn't it?

>>>>Thanks anyway, but I already used too much time pulling out the mods

get a 2 meter amp and a nice beam (thats what I use when camping out in the
woods of Arizona).

where at in the Adirondacks you camping at? there should be a half dozen or
so machines (at least in NY state) that you can reach.

>those licensed in communications know the least about it.

Similar to the irony of how you seem oblivious to the "logic" of your
position. You call my denouncement of illegal behavior as "non-hammie"
and "non-elmer", which implies that you feel that the converse is
true.

> You epitomize
>the example. One certainly can not practice the hammie creed when one is
>unable to define it.

And I suppose you, an admitted federal lawbreaker, can? What do you,
an 11 meter radio pirate, REALLY know about ham radio anyway?

This is nothing new, it's just something you conveniently chose to
ignore.

>>Once again, the 70 MPH speed limit thing was
>>not mine.
>>I never brought that up. In fact I was unaware
>>that there was a federally mandated 70 MPH
>>speed limit.

>See what you can learn when forced..

I have learned nothing. Only that you claim there is a "federal 70 MPH
speed limit" Something I have yet to verify.

>> The last I heard the 55 MPH limit was
>>dropped and a few states (Montana I believe
>>was one) actually had no speed limit on some
>>highways. The increase in accident rate then
>>forced them to impose a state mandated limit.

>What the hell does Montana have to do with the federal 70 MPH law?
>LMAO,,,,damn Dave,,,you're a barrel of fun today.

Maybe nothing, maybe everything. Why would the feds make a 70 MPH
speed limit after dropping the old 55 MPH limit? Perhaps is was based
on states like Montana, who dropped a speed limit altogether on some
of their highways. Damn you really do have to be led to the points by

your nose.

>>But assuming you are correct

>Too lazy to ascertain it for yourself in addition to not even being
>aware of it,,,,well,,,,off you go, now.

I'm a busy man. I can't keep track of every law and topic out there.

>>and that there is
>>a federally mandated 70 MPH speed limit, it's
>>not the same thing as the FCC rules. For one
>>thing there are no "federal speed police" who
>>will cite you for a violation of a federal law.

>Oh, I see. Let me get this right,,first you invoked, as your criteria
>for calling one who dxes ,a "federal criminal"......"It was a rule
>enacted by the feds, so it is federal law , and breaking it makes one a
>federal criminal"
>That was debunked with the speeding analogy.
>You then invoked, only upon defeat, the penalties one may receive, as
>your second and newly found criteria for holding one a "federal
>criminal" for dxing. Now, having been educated that criminal penalties
>can apply to speeding, you are invoking yet a third set of criterias for
>your position, claiming the ENFORCERS are the actual litmus test for
>which you maintain dxers are "federal criminals".
>Amazing.
>Absolutley astounding.

Yes, it is. Maybe you finally figured out that it isn't any one of
those criteria alone, but all of them combined, that make this a
federal crime.

See what you can learn when someone relentlessly pounds it into your
head.

>>Speeding laws are enforced on a state or local
>>level, and are treated as summary offenses.

>More educatiion and to borrow one of your invocations........."i didn't
>say in 100% of all cases"....point being,,,,speeding cases can, and do,
>carry criminal penalties, dependent, as you say, on the circumstances.

When? Other than becoming involved in vehicular homicide, or an
accident while DUI. When is a simple speeding infraction considered a
criminal offense? In those other cases, speeding becomes a minor
precursor of a much stronger offense. That stronger offense is what
carries the criminal penalty, not the speeding itself.

>>Radio law (The communications act of 1934 et
>>al.) grants the FCC the power to enforce these
>>laws on a federal level,
>
>

>And the states can also enforce these laws.

States CANNOT enforce radio law. Only the FCC has the power to do
that. Some states have enacted legislation to give them power to deal
with RFI interference cases. But the scope of their power is very
limited. DX'ing would not come under the state's umbrella of
jurisdiction.

>> and can certainly impose criminal fines and
>>jail time for the most flagrant rule violators.

>More for your gray matter: Federal LEOS also may enforce ANY violation
>of domestic US law, including speeding, if they so chose.

Which federal agencies regularly monitor traffic regulations?

You're really stretching now.

>>People who have refused to allow FCC agents
>>to inspect their stations, those who have
>>refused to respond to NAL's, those who
>>continued to operate illegally after being

>
>
>
>I would advise that, as opposed to you embrassing yourself in front of
>the hammie community and claiming they are illegal because you are
>unable to find a rule by the FCC permitting them, as you have maintained
>for your illogical reasoning.

In part 95 (Have you ever read it?), the FCC specifies both permitted
and prohibited transmissions. The fact that a ETS signal is not
specified under permitted transmissions, and the fact that "sound
effects" meant solely to "amuse or entertain" is called out
specifically under prohibited transmissions is a strong enough case to
lean toward the conclusion that ETS signals are not legal.

In any case, I am waiting for the FCC to respond to my query. I'm sure
they are busy and I might not hear back for a while.

>>That's the really funny part about this whole
>>thing. Twist will sit here and spin and
>>obfuscate and make all sort of excuses to

>>illegal.
>>But the law is clear on this.

>Everyone is clear on the law but you.

>>Yes, you clearly disregard it.

>You have no clue about the law,

You have no clue about a clue. The law isn't some "a-la-carte" set of rules that you can pick and chose from which you want to follow or disregard.

>And had no relation to what you were trying to say, yet you erred and
>claimed it did. Tell us, Dave, how is your "process" legally related?

It's not. But forensic criminalists use technology and a process of analytical investigation to piece together clues and evidence to paint a picture. THAT is not much different than what I was talking about.

Once again, you become hung up on literal meanings, so much so that you can't see the forest for the trees.

>You
>were to look up the term and learn its definition prior to using it in
>the futire so as not to embarrass yourself again.
>
>>There is nothing wrong with the context in
>
>>which I used the term.
>
>See above.

Which part? The part where you demonstrate your ineptitude in the english language and an uncanny ability to not understand context?

>meaning in response to my claim. Your claim, means that other hammies
>support your claim and agree with you, the exact opposite of what I
>claimed, maintain, and brought to your attention.

How does my claim of "I am not the only one" mean that those people are automatically hammies? Are hams the only other radio op's in the world? Especially considering that this is a CB newsgroup, you are way off-base.

You jumped to another conclusion and committed yet another bifurcation fallacy.

>Again, and for the
>record, I maintain NO other hammie agrees with you.

A claim of which you cannot verify. You can't possibly know what every ham thinks. The fact that you frequently make these sort of "The world is on my side" claims is why your narcissism is so easy to believe.

> You said you were
>not the only one, I asked you to name one that agreed with you, and you
>began to sputter and sink.

I only refuted your assumption that it had to be another ham.

>>So, I suggested that you ask them.
>

The case where I have proven, and you have just admitted, that your
political opinions are not those of a reasonable person.

>Giving up already? I was just starting to enjoy this.....

Sorry to disappoint you but I found another job and have other
responsibilities that are demanding a lot of my time, so I am left
with little time to waste on the newsgroup anymore. You would know
what I mean if you really had a job and custody of your kid.

Regardless, our discussions have already forced you to show both of
your faces on several topics, and to continue would just be beating a
dead cliche. So feel free to preach your self-righteous attitudes and
technical 'opinions' because nobody takes you seriously anymore.

And I'll still be around. I just won't be nearly as active as before.
So if you still feel the need to give further demonstrations of your
warped values then by all means do so -- just know that I probably
won't be able to provide a timely response.

Remember Frank, I am somewhat of a relativist. I do not believe in
absolutes except in certain undeniable cases. The "flip-flopping" is
your interpretation of what I have been saying.

Any good troubleshooter will tell you that there is a percentage of
probability that certain components will fail. There are also a finite
number of probable causes for failure. That's why we tend to look in
certain areas first.

>the same thing.

Yes, it pretty much does amount to the same thing. I am puzzled that you've never seen large value changes. Ceramic "disk" caps are pretty good at holding value. I have seen some mylar caps change though. But small electrolytics are known for value changes. The thing is that you normally won't know it unless the cap is critical to the stability to the circuit.

I have had low audio gain problem is CB radios where the problem turned out to be a nearly open electroyitic coupling cap. Not once or twice, but many times. These problems started happening (not so coincidentally) when radios started being made in Malaysia and other "low budget" shops.

>>>Well, if the AC resistance of the leaky cap dropped because of the

>your's neglected to address the heat generated by AC resistance in the
>-good- cap. In fact, you denied AC resistance was even a factor.

Because it's really not. It's the DC resistance that matters. That's what happens when a cap gets leaky, it develops a decreasing DC resistance. A.C. resistance is irrelevant when there is no A.C. present.

> Yet
>you just agreed above that it -is- a factor while making the excuse
>that you "didn't use the term A.C." Another flip-flop.

Yes, you made another.

>>>>>Ok then. Any voltage has a DC component and an AC component.
>>>>
>>>>>Pure AC has no DC component, and pure DC has no AC component.
>>>>
>>>>Those two statements are contradictory.
>>>
>>>
>>>Not at all. Your definition that AC must be a zero-crossing current
>>>was repealed along with prohibition. The problem was that there were

>>>getting to be too many terms for variations of direct current, like
>>>'varying direct current' (vdc), 'pulsating direct current' (pdc),
>>>'interrupted direct current'.....etc. So the concept has since been
>>>simplified to say that any current has an AC component and a DC
>>>component.
>>
>>You stated: "Any voltage has a DC component and an AC component. "
>>
>>Then you stated: "Pure AC has no DC component, and pure DC has no AC
>>component."
>>
>>Yet you cannot see how these two statements contradict each other?
>>
>>If you change the first statement to: "Certain voltages have a DC
>>component and an AC component. ", then the two statements would not
>>conflict.

>In several posts you have demonstrated that you have a problem
>differentiating voltage and current. You should address that issue.

I have no trouble. And how would the difference between voltage and
current relate to those two contradictory statements you made above?

>Now..... since you want to invoke semantics, I'll state this more
>clearly for you: A pure DC current has an AC component with a value of
>zero, and a pure AC current has a DC component with a value of zero.
>
>Feel better?

I should ask you if that tap dance felt good. What good is stating
that D.C. has an A.C. component of zero? It's the same thing as saying
there is no A.C. on a pure D.C. current.

It's misleading to state that one type of current has another type of
current as well, and then back pedal and state that that component is
zero. Then why bring it up at all?

>>>That's what I said. If the input power is 60 Hz then 120 Hz would be a
>>>harmonic, right?
>>
>>Technically, it's not a harmonic, it is the result of the full wave
>>rectification process. But there would be harmonics of 120 hz, but at
>>a substantially reduced level.
>
>
>Technically, it -is- a harmonic. The source of the fundamental
>frequency was acted upon by a non-linear function (rectification). The
>products of rectification are the harmonics of the fundamental. A
>frequency-multiplier circuit works on the very same principle, with
>the additional function of tuning the output to a specific harmonic.
>
>Basics, Dave. Learn the basics.

I know the basics. 120 hz is the fundamental frequency of a full wave
rectification, not a harmonic of it.

>>>>>The term "ripple" is old and has been replaced by "pard", which
>>>>>includes all AC components (or fluctuations) including hum, noise and
>>>>>spikes.
>>>>

>>>>spikes, then a simple linear supply would. Hence the need for a new
>>>>term, which encompasses a broader definition.
>>>
>>>
>>>If you say so.
>>
>>I did.
>
>
>Twice asserted. Again, as you say, "apology accepted".

For what? Providing a reason why the term ripple has been replaced by
a newer term and establishing the parameters by which that term came
to be, and illustrated why those parameters are irrelevant for the
linear supplies we are currently discussing?

>>>So if you have a cap connected between a DC
>>>source and ground then the DC is blocked while any AC is passed to
>>>ground.
>>
>>That depends on the reactance of the capacitor and the frequency of
>>the A.C.. In a power supply a large electrolytic cap acts much like a
>>battery, by providing a short duration storage for peak voltage in
>>order to "smooth" out the momentary loss of voltage between ripple
>>peaks. The higher the current draw of the supply, the more capacitance
>>you need to filter it effectively.
>
>
>Dave, can't you see that we're saying the same thing? The difference
>is that your explanation is sourced from an education lacking in the
>fundamental concepts of electronics.

Why is that "lacking"? I understand the mechanics of why the circuit
works. In the grand scheme of things, it doesn't matter whether you
follow the hole theory or the electron theory, as long as you can use
it to troubleshoot effectively, then that's all that matters in this
case.

>A capacitor -does- store a charge, and the amount of that charge -is-
>a function of it's capacitance. But it's ability to -accept- and
>-deliver- that charge leaves a gaping hole in your explanation. As I
>said before, the value in capacitance is -only one- factor of its AC
>resistance -- i.e, its ability to "filter" AC from a DC current.

It "filters" by charging and discharging, against the ripple.

>And for a better perspective, dust off your book on basic electronics
>and look up the page that covers simple LC filters -- low-pass and
>high-pass. Notice that a high-pass filter has the cap in series with
>the source, while the cap in the low-pass filter is an AC -shunt-. Now
>you have already admitted that a power supply cap is nothing more than
>a component of a filter, and I think it's safe to conclude that you
>meant a low-pass filter (since the intended output is DC).

True.

> Now unless
>you intend to argue that the capacitor in an LC low-pass filter does
>-not- shunt AC to ground, you have once again shown that you don't
>have a firm grasp of the basics.

The problem is that while what you say about low pass filters is 100%
true, when you start talking about power supplies, the job of the
filter caps becomes more like small temporary batteries than filter
components. I can turn off my 30 amp supply, and it will continue to
supply 12V for about 30 seconds (unloaded) before the caps finally
bleed off.

>>>>> When
>>>>>the load becomes large then so does the ripple, and if the cap has a
>>>>>high AC resistance then it will get hot very quickly.
>>>>
>>>>How? There is no A.C.! Pulsating D.C. does not switch polarity.
>>
>>>Update your lexicon and then read it again.
>>
>>There is still no A.C. If a voltage "swings" or "ripples" between +9V
>>and +10V, it is still keeping the cap charged in the proper polarity.
>>If the voltage swings negative, then you will have a problem, unless
>>the cap is a non-polarized electrolytic, like the type commonly found
>>in audio crossover circuits and other places.
>
>
>You're stalling with semanitcs, but even -then- you are wrong. Say
>your PS cap is charged to a DC voltage. When the power supply pulls
>the ripple to it's peak then current is flowing -out- of the cap. When
>the ripple bottoms out then current is flowing -into- the cap.

You've got that backwards. When ripple peaks, the cap charges. When
the ripple ebbs, the cap discharges.

>You
>have described the very same action at least twice. The problem is
>that you didn't even know that AC stands for "Alternating CURRENT"!!!
>The current is indeed alternating, even according to the obsolete
>definition of AC.

The polarity is not reversing. It is not A.C.

>>>>>Just about everyone who has ever used a soldering iron thinks they can
>>>>>write a course on power supplies.

>>basic building block, found in all electronic devices? What could be
>>more basic than a power supply?
>
>
>Oh, gee, I don't know..... How about:
>
>A battery & a resistor;
>Resistors in series and parallel;
>An inductor in a DC and AC current;
>Inductors in series and parallel;
>An inductor with a saturable core;
>A capacitor in a DC and AC current;
>Capacitors in series and parallel;
>A resistor and capacitor in series and parallel;
>A resistor and inductor in series and parallel;
>An inductor and capacitor in series and parallel;
>A resistor, inductor & capacitor in various networks;
>A current transformer;
>A voltage transformer;
>A power transformer;
>Impedance transformation of a transformer;
>A transformer with a resistive load;
>A transformer with a reactive load.......

All of which can be demonstrated by a power supply and associated lab
experiments.

>And I haven't even touched on semiconductors yet. Shall I continue
>with this list?

Sure, you've already made my case for me.

>>My tech school was a "hands-on" style of teaching. They could have
>>bored everyone to tears by writing all sorts of math formulas on a
>>chalk board and demonstrating how things were supposed to work. But it
>>was much more rewarding and easier to relate to the circuits if we
>>could actually see it work in real life.
>
>

>If observation alone was sufficient for an education then anyone who
>ever listened to the radio or watched a television would be an
>engineer. That isn't the case. Those boring equations are technical
>and mathematical descriptions of how electronic components and
>circuits work in "real life". If you didn't learn these fundamental
>concepts because electronic theory "bores you to tears" then you
>probably shouldn't be discussing the subject with an EE who -did-
>learn the basics (and in much more depth than they are covered in any
>"tech school").

I am an engineer Frank. Tech school was my first taste of formal
education, which I attended starting when I was 15 years old. Theory
was a part of the curriculum, but it was closely accompanied by lab
experiments where we could "put the theory to work" in actual
practical circuits.

>>>The cap is in parallel with -both- the source and load impedances; and
>>>while the load impedance may be linear, that's rarely the case for the
>>>source impedance.
>>
>>But resistances and impedances in parallel tend to act like resistors
>>in parallel, and the results are similar. The source impedance, in the
>>case of a power supply is what is contained in the rectifiers. The
>>transformer is pretty much isolated at this point.
>
>
>Wrong, wrong, and even -more- wrong. First, an impedance is not only
>resistance but also -reactance-.

No kidding.

>Second, the power transformer is a
>source impedance with an inductive reactance that changes with the
>load. Third, the load can be (and frequently is) reactive to some
>extent.

Not if the load is purely resistive.

> Fourth, the caps are -both- a source and load impedance,
>depending on which end you are looking at. Fifth, the rectifiers are
>nonlinear components but they -do- have a linear region (conduction)
>which passes impedances quite nicely, and in both directions......
>
>Shall I continue with -this- list?

When you are trying to cloud a simple circuit like a power supply by
bringing up a bunch of barely relevant issues, who am I to stop you?

A power supply is not an oscillator (Well, it's not supposed to be), a
doubly balanced mixer, a PLL circuit, or a transmitter. It is a simple
A.C. to D.C. converter. Why try to make it more complicated than it
truly is?

>>>Also, the capacitance of an electrolytic isn't a
>>>constant; it's non-linear with respect to the voltage (a factor of
>>>it's AC resistance, and another reason why audiophiles prefer motor
>>>caps over electrolytics).
>>
>>Well of course! Look at any R/C time constance charge/discharge cycle
>>and it's not a straight line. As the cap reaches 70% of it's
>>capacity, the charge rate slows.

>Holy crap, Dave..... didn't they teach you -anything- in that "tech
>school"? The RC curve is the relationship between voltage and time,
>and assumes that both the resistance and capacitance are constants.
>What I said (and what you are ignoring) is that the capacitance of an
>electrolytic cap is -not- a constant.

Isn't that what I just said?

> And because it is not a constant
>the RC curve does -not- follow the same path that it would if the
>capacitance -was- a constant. And BTW, the RC curve becomes a straight
>line when the current is constant because the charge rate of the cap
>is a fuction of current, not voltage. This is yet another example of
>your inability to distinguish current and voltage.

Are you trying to say that an R/C time constant is a straight line? I
sure hope not. If not, then you agree with me.

>>> Both these nonlinearities end up converting
>>>your overly-simplistic R/C time constant analysis into an integral
>>>function.
>>
>>Call it what you will. My "overly simplistic" analysis covers the
>>conditions of what is actually happening.
>
>
>It's clear that you have absolutely no clue as to what is actually
>happening. Learn the basics, Dave.

I know the basics. I also know the more advanced stuff.

>>That sounds like double talk. How can a simple concept be described in
>>overly simplistic complexities?
>>
>>> It's like you are trying to describe baseball
>>>with dumbed-down Newtonian analysis. You still think you can write a
>>>course on the subject? I don't think so.
>>
>>It's time to remind you of Occam's razor. I tend to use simple terms
>>when they fit. There's no need to be any more complicated than
>>necessary. My explanations were just that. I could have gone to the
>>trouble of mathematically explaining the whole deal, but that would be
>>far more effort than this thread deserves.
>>

>>The complexities have been introduced by you in an effort to discredit
>>my explanations. While you can't deny them, you can inflate their
>>complexity and then accuse me of not explaining it thoroughly enough.
>
>
>You are once again confused. In your attempt to demonstrate that you
>know what you are talking about you have ultimately proven that your
>understanding is poor at best. THAT was my point, and THAT is what is
>evident from your technical explanations

Perhaps it is not me that needs a refresher course in electronic
theory. It would seem that real life experience has paralleled my
understanding of the hows and whys and has contradicted what you have
said. In other words, I have seen nothing in my 35+ years of playing
with and repairing radios that goes along with your observations. But
I have seen many that have agreed with mine. Now, unless you want to
make the case that the laws of physics works differently on the left
coast, I would tend to question your depth of "knowledge".

> Maybe you think you can leaf
>through a few textbooks, speed-read a few concepts, paraphrase them
>and try to pass them off as if they were integrated into your
>education.

That's what it seems you have been doing. Only you forgot to read the
part about caps drying out.

> Well, you can't. I've been in the field long enough to
>recognize that scam and it doesn't work. It didn't work for Skippy, it
>didn't work for Toll, it didn't work for Eitner and it won't work for
>you. But please don't stop trying because I find it very entertaining.

Maybe you are the one who doesn't know what you are talking about
Frank. You've gotten into "discussions" with other people before and
tried to play that game. In some of those cases the stuff you brought
up was a bit off-the-wall, and contrary to accepted practices. The
whole "coax length" debates come to mind.

>
>>>>>So when is your book coming out?

>>>>tube amp, it's easy to eliminate practically every potential cause.
>>>
>>>
>>>It's not always easy.
>>
>>No, but it is doable.
>
>
>Another flip-flop. Make up your mind -- is it easy or not?

Depends on the equipment and the application.

Not easy does not mean impossible, or even improbable. It is easy to
eliminate the majority of common practical causes. In most cases, the
cause will be found during this process. In those rare cases where the
cause is not part of the statistically probable causes, a little more
investigative time may be involved. Troubleshooting is all about
knowing the statistics. If you get in a piece of equipment that shows
a common failure that you've seen before, would it make sense to check
unrelated parts, or would it make more sense to go where the previous
faults have been found?

>
>
>>><snip>

>
>Isolation failure in the line transformer can easily put a couple
>hundred volts on your 12 volt supply. Seen it a few times (twice with
>Pyramid power supplies -- cheap transformers that are too small for
>the rated output).

Never seen it happen. A breakdown of transformer insulation will
usually result in a short and a blown fuse.

>>>Many, simply because the cause of a failure isn't limited to internal
>>>influences. But even if you limit the scope to the equipment, the
>>>failure of other components is not always obvious. And here's a
>>>perfect example:
>>>
>>>The first Peavey 1.3K I ever worked on came into the shop with a blown
>>>bank of power transistors (not uncommon with Peavey amps) and a bad
>>>OP-amp. The obvious conclusion is that the OP-amp locked up and drove
>>>the bank into overload (the amp also has a triac clamp but it rarely
>>>works -- it just nukes a trace on the board and lets the bank blow).
>>>Anyway, that wasn't the case at all. I replaced damn near everything
>>>in that amp and it would still lock up. To make an already long story
>>>short... it turns out that Peavey, in their economical wisdom, used a
>>>dual-diode as bias seperation for opposite banks of power transistors
>>>without noting it in their literature, and one of those diodes had
>>>shorted. The component appeared to be perfectly functional, showing a
>>>forward voltage drop characteristic of a typical silicon diode, but it
>>>was supposed to be -twice- that drop.
>>
>>Ah, so instead of a 1.2V drop, it was only showing .6V? A change in
>>bias can certain cause a problem like that. But your example does not
>>negate my statement. You found that another component failed, which
>>resulted in a chain reaction failure. The cause of the failure was
>>found. But if you can't pin down the cause of failure to any other
>>component, you are left to consider that either the bad component
>>failed on its own, or it was subjected to a momentary stress beyond
>>its limits through some external event.
>
>
>Actually, it was a design flaw. The diode was supposed to be thermally
>connected to the heatsink, but was mounted such that the thermal link
>was nothing more than a blob of heatsink grease. The grease dried out
>and the redidue became a very good insulator. Regardless, my point was
>that the failure is not always intrinsic to the circuit or device;
>many times the problem is caused by outside influences, such as
>improper operation or maintenance, poor design, manufacturing flaws,
>etc. And many of those faults are not always evident; i.e, they don't
>leave evidence of the cause of the failure. The fact is that there was

>no evidence of the cause of the failure in the Peavey. I learned of
>the cause after harassing Peavey tech support until they forked over
>the info (I really think they try to keep faults like that a secret
>because they make so much money on spare parts, but I suppose that's
>just one aspect of modern business practices).

So you finally found the source of the problem. You simply found another possibility to consider. It was nothing magical. The next time you see an amp like that with the same problem, will you not then check that diode first? That's what I mean about experience and statistical probability.

You might have half a leg up on me in pure theory, but you are seriously lacking the proper mindset to be an effective troubleshooter, as you don't seem to grasp the analytical mindset that's required or the practical application of your theory.

>>>So there are -many- possibilities that may or may -not- be obvious.
>>
>>I respectfully disagree. There ARE other possibilities yes, but I
>>disagree that there are "many". A simple process of elimination will
>>whittle that number down to a few highly probable possibilities.

>A shorted resistor is not "highly probable", nor is a half-shorted
>double diode, a PCB trace with a hairline crack, an incorrect slug in
>an RF or IF transformer, etc. I can make a list here, too.

Have you ever seen a bell curve? Have you ever studied the Taguchi methods of quality?

Much of this assumes a certain degree of predictable and probable failure areas.

Is a shorted resistor the first thing you consider? The PC trace crack?

The double diode should have been on the list though. As one of the components that set the bias, it would be highly suspicious in a cascade meltdown of several amp stages. At least it would be to me.

The incorrect slug is a interesting one. If the radio once worked, there is no way that this could happen. If you were told that someone else tried to fix it, then I would be looking for things like that. I have seen similar problems with "Screwdriver Tech" mods. Undoing improper repairs is another statistic to consider.

>>>AC and DC volts across the cap, as well as the time it takes until
>>>failure. Post the results.
>>
>>When I get a chance, I'll set it up. I need to find some high current
>>resistors that can stand dissipating 20 amps or so.
>
>
>What do you need resistors for? Just hook the puppies up! But if you
>want a resistor anyway try an electric space heater or stove element.

Without a sufficient load resistor, how can I validate your assertion
that increased ripple (due to load) is the cause of cap failure?
Without the load, if I place a cap across the output of the battery
charger, all I've done is create a filtered DC power supply. The cap
should last for years under those conditions, as would be expected.

I have yet to see an electric space heater than runs on 12 V. The
current required would make it impractical. My space heater draws 12

amps at 120V. At 12 volts, it would have to draw 120 amps for the same
wattage.

A stove element might work. I'll have to measure the resistance and
calculate the load.

>>>>Why use a light bulb to do a zener's job?
>>>
>>>
>>>The point was that the characteristics of a low-power device can be
>>>amplified. And yes, a light bulb is sometimes preferable to a zener
>>>because zeners are noisy little bastards.
>>
>>That shouldn't matter in a power supply.
>

>>enough to make 100%.
>
>
>Geez Dave, can't you read? The spec was 0.5mV for -50%- modulation.

My book says 5 mV for 50% modulation.

>And yes, it will most definitely "tickle" the modulation because mine
>is set just as described and it works dandy. BTW, your lack of both
>experience and education is showing

Yea, it's showing that you put your foot in your mouth, and you don't
know how to back it out and still save face.

> -- typical output of a dynamic
>microphone just -begins- in the low microvolt range. We're talking
>-60dB or less. The dynamic range of a human voice isn't that great,
>barely 20dB, yet the dynamic range of CB AVC circuits (or AMC, AGC,
>CVA, etc) can be anywhere from 40 to 60dB, which is such a wide range
>for a number of reasons, not the least of which is the wide variety of
>microphones, voices, and distances between the mics and the voices.

>And 0.5mV is plenty for 50% mod, especially when the radio's mic
>sensitivity is specified for 1.0mV minimum at 50% mod.

Then .5 mV would make about 25% modulation. Not enough to set any
alignment points.

> I offered to
>scan the page..... are you sure you don't want to see it?

I believe you know how to read. But what you are reading is wrong.

> After all,
>Uniden made these radios for radio shaft, so it was -Uniden- that
>provided the information in the service manual.

Are you sure about that? Are you also confident that the decimal point
was not a typo?

>Not like Sams which
>got their info from reverse engineering.

And you know this how?

>So which manual do -you-
>think is more likely to be accurate, Dave? Don't you think Occam's
>Razor applies in this case? Or is this another case for Sherlock
>Holmes?

Well, the issue becomes, one of our manuals is wrong.

And once again Frank, the fact is that I can find NO other reference
in any of my other numerous manuals (Some are factory) for dozens of
radios which calls for such a low level of mike input. So now that
leaves 2 possibilities. Either:

A. You are wrong.
B. Every one of my test procedures are wrong.

Now what is the statistical probability of either of those choices?

>>BTW, there is no "need" to bypass the LPF. It's just that the radio
>>sounds better IMHO that way. The LPF overly restricts the audio
>>bandwidth and kills fidelity. If you like sounding like you're talking
>>into a paper cup, then fine. I admit that I'm somewhat of an audio
>>purist. I like smooth "broadcast quality" audio. That's my personal
>>preference. YMMV.
>
>
>CB is not intended for high-fidelity. Passing the higher freqs widens
>the bandwidth of the channel and makes it more likely to bleed into an
>adjacent channel. That's one reason why CB mods are illegal.

No kidding. But the audio BPF also cuts back on the very low
frequencies as well. All I know is that the radio is more pleasing to
the ear when the BPF is removed. From a purely legal standpoint, you
are correct.

>
>Regardless, you can get improved sound with nothing more than a better
>mic. The stock microphones are usually designed for 300-3000Hz and are
>as flat as the Matterhorn. Plug an electret into the radio and the

>response flattens out, making it sound much better even -with- the LP
>filter. This should come as no suprise since 3000Hz is a pretty high
>frequency when compared to the human voice. Only Kate Bush could sing
>-that- high.

300-3000 hz is commonly referred to as "communications quality" audio.
This is why most AM rigs have 6 Khz filters in them and SSB rigs have
3 Khz filters. But people like to run D-104's on their rigs, and the
BPF mod makes the radio sound better on those mikes.

You and I can debate on which method makes more sense, and from a
puritanical standpoint I would probably agree with you. But you have
to remember, that when you are in business working on radios for other
people, they don't want to hear that their mikes are junk, or that
they should do this or that. They want the cheap and easy fix. That's
what removing the BPF gives them. It makes the rig sound as good as
their last one on the same mike.

>>> Higher drive at mid-modulation will push the audio into
>>>compression earlier, which would easily account for your audio
>>>sounding "mushy and compressed", just as you described.
>>
>>Yes it would. But that's not the reason in my case. What was that you
>>tried to say before about acknowledging other possibilities?
>
>
>Why should I? My audio sounds fine. I'm not the one with "mushy and
>compressed" audio. I'm not the one who uses a book with an error in
>the alignment procedures.

Probability would suggest that yes, you did.

> And I'm not the one who felt the need to
>bypass the LP filter. I don't see any reason to even consider any
>other possibilities. If it works, don't fix it.

There's "works" and then there's "works better".

>>> My radio
>>>sounds just fine without the modification, so it's very likely that
>>>-your- book is in error.
>>
>>There is no error in my book. It correlates with other radio alignment
>>procedures.
>>
>>Perhaps your book is in error. You assume that because it came from
>>Radio Crap, it's infallible.
>
>
>Wrong. I never assumed any such thing. You mentioned the discrepancy
>so I referenced it's other specs, as well as specs from other radios.

What other radios?

>The only discrepancy is with -your- book. It stands alone in the
>modulation procedure you described.

No, in fact YOURS stands alone.

>The question is, given how your
>own description of the audio is indicative of misalignment, and that I
>have a more authoritative reference that disputes yours, why do -you-
>assume that -your- book is correct?

Because it agrees with several dozen other books.

>>My procedure is similar to what other radios also prescribe. After
>>all, there isn't much difference in the output that a given stock
>>microphone presents.

>Wrong. I have lots of mics that have widely different levels. And the
>useful dynamic range of any given mic can be 30 to nearly 100dB,
>depending on the type. That's why one mic will sound great on one
>radio but crappy on another, and vice-versa.

That has little to do with actual output level and more to do with
frequency response.

>>The fact that your radio "sounds fine" is a matter of some
>>subjectivity. I didn't say that the radios (Radio shack, Cobra and
>>President versions of this chassis) that I've worked on sounded "bad",
>>only that I felt that they sounded "better" with a modified LPF.
>>Again, a matter of personal preference.
>
>
>You said they sounded "mushy and compressed". That isn't bad? Geez
>Dave, how many times can you flip-flop in one post?

A personal preference. I am an audio purist, like I said before. Other
people may not hear anything wrong. Hell, some people find the sound
of an overdriven class "C" amplifer as "fine".

>>> Not only that, I'm suprised that a person of
>>>your self-proclaimed experience would not have suspected the error
>>>earlier -- after all, your own description of the audio quality is
>>>indicative of overmodulation.
>>
>>Not at all. 5 mV is hardly too much audio drive. Both the mike preamp
>>compression circuits and the modulation AMC were working properly. The
>>compressed sound was due to lousy audio bandwidth,
>

>Or maybe it was due to a misalignment which caused a downward
>expansion in a region where a flat response is intended?

What kind of B.S. are you slinging now Frank? I could "align" that
radio with my eyes closed. Please don't insult me.

>Naw, that
>couldn't be it. You and your crystal ball must be right, Dave, it
>couldn't be anything else.

When I'm right, I'm right. My experience tells me so.

>> coupled to a
>>microphone (A D-104) which didn't mate well with the audio bandpass
>>characteristic that this radio with the LPF presented.
>
>
>D-104's suck. They have no low-end and the high-end is raspy.

The high end is fine when the crystal element is good, and hasn't hit
the floor one too many times.

>The
>output level of the unamplified models is too high for most radios,

Wrong. The output of the unamplified mike is high impedance, and will
not mate well with a solid state rig, unless the mike input impedance
is also high (Which it usually isn't).

>and the amplified models are usually turned up too high by the user.

That depends on the person.

>People like them because they are loud, but they are loud because of
>their high and narrow spectral response -- not a mic I would consider
>using for high-fidelity.

Most CB'ers want to be "loud and proud". Hence the immense popularity
of thr D-104.

> Want a good mic? Try a Shure 522 -- a lot
>cheaper than a D-104 and sounds a lot better.

I've used Shure 444's before. I'm not familiar with the 552.

>>> Yet you didn't bother to find a more
>>>authoritative reference, or compare the calibration specification to
>>>that of similar radios (I did, and 50% modulation at 0.5mV is common
>>>for Uniden radios that come with the same mic).
>>
>>Funny, I took a quick look through a bunch of different test
>>procedures for various radios. Audio input ranged from 5 mV
>>(Considering the gain of that mike preamp circuit, that's not
>>surprising), to 10, 20, 50, 70 and 100 mV, to set the AMC. In NONE of
>>them was there ever a call for anything less than that.
>
>
>Like I said, I can scan the page if you don't believe me.

I believe what you are reading. But I truly believe that it is WRONG>

>You can even
>ask Lance since I got the manual from him with the radio. BTW, have

Typical. Deny the truth by accusing the harbinger of that truth of
"projection". You are sounding more like Twisty every day.

>
>
>Oh heck, I'll scan the page anyway. I'll post the link later after I
>dig the scanner out of the pile (everything's a mess here right now).

No need. I believe you are reading what you are reading. It's just
wrong.

>>>>>>There is very little you could tell me about that radio (or more
>>>>>>specifically that chassis) that I don't already know.
>>>>>
>>>>>
>>>>>I just did. Twice in this post and once in the previous post.
>>>>
>>>>What you "told" me wasn't of any real info about the radio itself.
>>
>>
>>>I told you some -very- real info about the radio -- you just didn't
>>>know how important that info is, or how it demonstrates that you
>>>aren't as good with electronics as you think you are.
>>
>>Like I said, there is nothing *valuable* you could tell me in a
>>hundred lifetimes, about that radio that I don't know, or haven't
>>experienced in one form or another. What you just recently learned, I
>>was doing 25 years ago. I've literally worked on over a hundred
>>versions of that radio. I used to sit there and play "what if" on my
>>own radio just for fun when I was bored and had nothing else to do.

>Wow! Over a hundred -versions- of that radio? I didn't even think
>there were a hundred CB companies at the time the radio was made!

A hundred examples of the various radio versions of that chassis.
Meaning, that I've worked on several examples of the TRC 449, TRC 458,
TRC 457, Cobra 138 XLR, Cobra 139 XLR, President Washington, etc.

> So
>you must really know your stuff, huh? But wait..... you don't even
>have a factory manual for the radio. So everything you know about the
>alignment of that radio is from where..... the Sams manual?

Maybe you need to be shown how to align a radio, but most radios I can
align without a procedure. After you've worked on as many as I have,
the tune up procedures are strikingly similar. I have a bench full of
test equipment, and a whole ton of experience. In fact, I go way
beyond the test procedures as most of them assume only modest test
equipment. I align transmitters with an oscilloscope and a spectrum
analyzer. I have an HP audio analyzer which I use to align receivers
for best signal to noise. I have a pulse noise source to align noise
blankers. I've come a long way since the 70's, when I had little more
than a VOM and a wattmeter.

>>I've designed controlled carrier modifications for it, FM receive and
>>transmit, 10 meter conversions, Digital readout frequency selection,
>>photocell LED and meter light dimmer circuits, wideband transmit and
>>receive, and a host of other things that I've long forgotten about.
>>Like I said, that chassis (in its various forms) has been one of my
>>all time favorites for the sheer ease at which the radio modified and
>>the overall capability of it.

>I'll be impressed when you can design one from scratch. But that would
>be superfluous, wouldn't it?

I have built radios from scratch. But nothing quite so elaborate.

>>>>>Thanks anyway, but I already used too much time pulling out the mods
>>>>>and restoring it to stock condition -- except for the faceplate. Got a
>>>>>spare?
>>>>
>>>>No I don't. Most of my spare faceplates belong to the bonepile radios,

>>>
>>>
>>>Heard that. Did you see the pic of my "bonepile" that I posted last
>>>fall? I must have a couple dozen of those cheap, little Cobras buried
>>>in the pile, not to mention a half-dozen or so mini-Midlands (which
>>>weren't too awfully bad little radios, just not worth fixing). I
>>>should go through the pile someday, make a list and post it for anyone
>>>looking for parts.
>>
>>I saw it. Your "bonepile" is a bit larger than mine. I've been slowly
>>trashing the real junk, as I've pretty much "retired" from the CB-tech
>>scene. It's just not worth the time any more, as I've got far too much
>>on my plate these days. Being a parent takes up a lot of time.

>So does the newsgroup, apparently.

Not at all. I do this during short "breaks" at work. When I travel or
things get really busy, I'll disappear for a while. But since I
switched to ptd.net, and my old newsreader stopped working and I had
to switch to Forte Agent, I don't even have a newsreader setup at
home.

Political apathy is a poor excuse for, and in fact leads to becoming
ignorant about what actually goes on and why.

I wouldn't brag about being deliberately not interested in who runs
your government.

Someone once said that those who do not take an active part in
deciding their leaders, deserve who they get.

Hi Guys,

I heard the news via the internet... and it's true. Henry amps are no more...:

Here's the e-mail from Mr. Henry Himself:

From: "Ted Henry" <henryradio@earthlink.net>
To: "Chuck Adkins (K8CPA)" <**********@comcast.net>
Subject: Re: Lost your Lease?
Date: Thursday, February 10, 2005 12:23 PM

There were about 15 reasons why we stopped - the primary reason was that the business has lost money for a number of years. The loss of the lease was about 5th down on the many reasons it made no sense to continue the business.

Thanks for your interest.

Are you mad? Are you here to tell me that politics is entirely
LOGICAL? If so, you, my friend, are seriously naive.

Politics is a matter of deciding which "side" makes the most sense to
you, based a lot on faith. Local cannot begin to explain the hows and
whys of the political mind.

AmnotGeorgeBush) wrote:
Sure you do. You take the non-hammie approach, the non-elmer
approach,,the anti-amateur creed approach.

>And I suppose the "elmer", "ham" approach is

>to openly condone illegal

>activity?

I have always maintained an incredible irony is a small percentage of
those licensed in communications know the least about it.

>Similar to the irony of how you seem oblivious

>to the "logic" of your position.

Not at all similar. You are a licensed amateur, and as such, are held to
a certain standard, a standard you continue to ignore.

>You call my denouncement of illegal behavior

>as "non-hammie" and "non-elmer", which

>implies that you feel that the converse is true.

Incorrect, Dave. I correctly note your name-calling based on your logic
(legalities) is non-elmer like. I correctly note your position
used to justify your name calling actions are non-elmer like. Calling
names is non-productive and reactive.
You epitomize
the example. One certainly can not practice the hammie creed when one is
unable to define it.

>And I suppose you, an admitted federal

>lawbreaker, can? What do you, an 11 meter

>radio pirate, REALLY know about ham radio

>anyway?

You ignorantly and
erroneously call people criminals for dxing merely beacuse you are
unable to distinguish between a civil and criminal nature.

>Call it "shock value".

If the shoe fits,,,,,I call it what it is,,,ignorance.

>I call it deflection of responsibility.

You also called roger beeps illegal.

>Too many people break the law, and then

>trivialize it, in order to appease their

>conscience.

Then perhaps you should address the problem and not the symptom...you know Dave, become proactive instead of reactive.

>Ok, let's run with this. What do YOU think is

>the "problem" and how should one "address"

>it?

I'm not the one maintaining a problem exists, Dave..you are.

>You are a perfect example of this by

>relentlessly arguing the semantics of the

>situation, as if it really matters on the grand

>scale who you have to pay the fine to.

_
>then you should stop bringing it up.

Now that's priceless. You can get not one person in this group to agree with you that it is I who brings up the law in regards to cb radio.

>How do you know that?

I asked you the same thing regarding your invocation that you are not alone in claiming roger beeps are illegal, but you can not cite these mysterious and invisible supporters only you can see...again,,you are hallucinating and experiencing and hearing and reading things that only are real to you.

>More mind reading?

You
are really making some incredibly stupid claims, even by your normal lying standards which for the most part, we have accepted of you, Dave. But hell, now you really are desperate. What the hell happened up there? Philthy loss to much for you to handle?

>You are all about image and appearances.

But of course, I am so caught up in such appearances, I choose to access the web with webtv,,that's how concerned I am with appearances.

>In

>the real world though, image is nothing.

>Reality is everything.

>The point is that you are breaking federal law.

If that's your point, accusing me of bringin it up really has you confounded. But let's try and keep you focused for a second,,,,,speeding past 70 MPH is also "breaking federal law",,an analogy that has you writhing about.

>Not that I'm aware of.

And in addition to myself, Frank has also illustrated when you are not aware of something, you are unable to accept it as reality.

> Speeding is still an infraction enforced by

>local and state LEO's

>You live in denial.

Firstly, the only criteria you cited as your reason for calling one a "federal criminal", was "it was a rule enacted by the feds, so breaking it is a federal crime and makes one a federal criminal".

>Simple logic. Something that seems to escape
>you.

If it was so simple, you would have figured out the differences, but then again, the fact that roger beeps are legal is quite simple too, and that has you doing cartwheels.

>The FCC rules clearly provide both civil and

>criminal penalties for rule violations depending
>on the circumstances involved.

Same for speeding.

>You can't be fined $10,000 or spend time in

>jail for speeding.

You most certainly can get jail time for speeding, Dave. Prior to educating you on this item, I note that you once again attempt the invoking of the monetary amount as criteria (albeit, highly incorrect) for what constitutes a "federal criminal'.

>The potential

>is there for criminal penalties.

Same for speeding,

>Show me where you can spend any serious

>time in jail for speeding or be fined in excess

>of $1000.

Sure, Dave. Always glad to educate your loud and proud ignorance Any speed greater than 15 MPH over the limit requires a court appearance. Try doing 120 in a 55 and see what that gets you in some jerkwater town. Let's see, by the mere act of speeding alone, one can be charged with reckless endangerment, careless and/or reckless driving, and whatever other statutes that may be applied from a litany of charges. Littering can also get you a year in jail and yes..TEN THOUSAND DOLLAR fine,,,the signs are all over Florida. Does that also make one a federal criminal, Dave? By each and every excuse you have invoked for you calling one who dxes a federal criminal, a speeder and a litterer meet those same parameters. You really struggle with being wrong, Dave. In fact, it is responsible for your errant behavior and irrational outbursts concerning things that are only real to yourself.

>I never said that in 100% of the case, this will

>happen and, in fact, I acknowledged that you

>stand a good chance of never being caught.

Same can be said with the comparison to speeding,

>Sure. The same comparison can be made for

>many laws, so what? It's still doesn't make it

>right, or justifiable.

Stay focused, Dave. Only you and Doug are transfixed with such topics,,,this is another of your topics, but the current topic you are having such dilemmas with, is your criteria you submit for holding a dxer a federal criminal simply. It's wrong, just as your position on other facets of the law (roger beeps), is wrong.

>But despite the fact that you have never been

>caught does not negate the truth of your

>commission of illegal actions in violation of

>federal law.

No one ever argued with you that such acts were illegal. You are roaming. Try and remain in topic.

>That IS the topic, and has always been.

No,,that is not the topic and has never been the topic of anyone except you and n8wwm who obsess on such things. Again, that is never the topic of anyone except yourself and Doug.

> YOU are the one who tries to twist and

>obfuscate the point.

Stay focused, Dave. Accusing me of bringing up the law, accusing me of making the topic of legalities, is so comedic, Dave. You are trying way too hard, or you are suffering serious problems.

–
  The manner in which you arrived at this decision, was referred by yourself as
"progressive logic". This too, was decimated as you were reminded that the 70 mph speed limit also met your criteria. Changing your values in mid-argument, you now invoke that the penalty one receives is now your new criteria.

>This is nothing new,

> it's just something you conveniently chose to

>ignore.

Most people ignore what does not exist. The monetary amount of the fine as criteria for what you hold as a "federal criminal" exists nowhere but in the same mind that says roger beeps are illegal.

>Once again, the 70 MPH speed limit thing was
>not mine.

>I never brought that up. In fact I was unaware

>that there was a federally mandated 70 MPH

>speed limit.

See what you can learn when forced..

>I have learned nothing.

LOL,,,you said it. But what is so sad, is you continue to refuse to learn, even when other hammies educate you.

>Only that you claim

>there is a "federal 70 MPH speed limit"

>Something I have yet to verify.

>The last I heard the 55 MPH limit was

>dropped

To place this in proper perspective, you also claimed the "last you heard", roger beeps were illegal, when in fact, they have never been illegal during your time in radio.

> and a few states (Montana I believe

>was one) actually had no speed limit on some

>highways. The increase in accident rate then

>forced them to impose a state mandated limit.

What the hell does Montana have to do with the federal 70 MPH law?
LMAO,,,,damn Dave,,,you're a barrel of fun today.

>Maybe nothing, maybe everything. Why would
>the feds make a 70 MPH speed limit after

>dropping the old 55 MPH limit? Perhaps is

>was based on states like Montana, who

>dropped a speed limit altogether on some of

>their highways. Damn you really do have to be
>led to the points by your nose.

Show me another human anywhere on the planet that feels Montana played such an integral part of the federal speed limit. Damn, you really have to have your nose rubbed in it.

>But assuming you are correct

Too lazy to ascertain it for yourself in addition to not even being aware of it,,,,well,,,,off you go, now.

>I'm a busy man. I can't keep track of every law
>and topic out there.

Yet, that has never stopped you from talking sideways about a topic you invoke often but know little of...radio law.

>and that there is

>a federally mandated 70 MPH speed limit, it's

>not the same thing as the FCC rules. For one

>thing there are no "federal speed police" who

>will cite you for a violation of a federal law.

Oh, I see. Let me get this right,,first you invoked, as your criteria for calling one who dxes ,a "federal criminal"......"It was a rule enacted by the feds, so it is federal law , and breaking it makes one a federal criminal"
That was debunked with the speeding analogy. You then invoked, only upon defeat, the penalties one may receive, as your second and newly found criteria for holding one a "federal criminal" for dxing. Now, having been educated that criminal penalties can apply to speeding, you are invoking yet a third set of criterias for your position, claiming the ENFORCERS are the actual litmus test for which you maintain dxers are "federal criminals". Amazing.
Absolutley astounding.

>Yes, it is. Maybe you finally figured out that it

>isn't any one of those criteria alone, but all of

>them combined, that make this a federal

>crime.

Dave, you are a piece. All the criteria combined can still pertain to a speeder and a litterer, yet it still doesn't make one a federal criminal.

>See what you can learn when someone

>relentlessly pounds it into your head.

Dave, you went off the deep end.

>Speeding laws are enforced on a state or local
>level, and are treated as summary offenses.

More educatiion and to borrow one of your invocations........"i didn't say in 100% of all cases"....point being,,,,speeding cases can, and do, carry criminal penalties, dependent, as you say, on the circumstances.

>When? Other than becoming involved in

>vehicular homicide, or an accident while DUI.

>When is a simple speeding infraction

>considered a criminal offense?

When it's no longer "simple" speeding by virtue of the speed. Other examples abound. Note only you innvoke the term "simple" speeding and only you can apply a definition to it,(once again, struggling to make your feelinsg know to the world, concerning just exactly what your new term means)
as the term officially exists nowhere in the legal arena.

>In those other cases, speeding becomes a

>minor precursor of a much stronger offense.

>That stronger offense is what carries the

>criminal penalty, not the speeding itself.

Semantics. Speeding itself, by the very nature of the speed, can and often does carry a criminal penalty. You're wrong, Dave.

>Radio law (The communications act of 1934 et
>al.) grants the FCC the power to enforce these
>laws on a federal level,

And the states can also enforce these laws.

>States CANNOT enforce radio law. Only the

>FCC has the power to do that.

Wrong,,an act was passed permitting local enforcement.

> Some states have enacted legislation to give

>them power to deal with RFI interference

>cases.

You are wrong again. The states have not enacted such legislation, but local jurisdictions have. Once again, you illustrate you know next to nothing of the law whcih you continually invoke and which gooverns radio.

>But the scope of their power is very limited.

>DX'ing would not come under the state's

>umbrella of jurisdiction.

> and can certainly impose criminal fines and

>jail time for the most flagrant rule violators.

More for your gray matter: Federal LEOS also may enforce ANY violation of domestic US law, including speeding, if they so chose.

>Which federal agencies regularly monitor

>traffic regulations?

The DOT. Did you even graduate high school?

>You're really stretching now.

Not at all, you are really screwed up and I have never seen you more wrong and off base than you have been this week.

>People who have refused to allow FCC agents
>to inspect their stations, those who have

>refused to respond to NAL's, those who

>continued to operate illegally after being

>warned, know all too well what those stiff

>penalties incur.

Heck, even when you were educated by other hammies on here regarding your ignorance claiming "roger beeps are illegal" you chose not to learn.

>What other hammies have said anything

>regarding the issue?

My goodness, Dave, I don't know what it is from whcih you are suffering, but you are seeing things that aren't there and missing things that are. Sideband presented to you an affirmed position concerning the legal

nature of roger beeps, as did Bert Craig.

>I am putting this issue to rest one can for all. I

>have written to the FCC for a definitive ruling

>on this subject. If they tell me it's ok, I'll eat my
>crow and tip my hat in your direction and it'll

>be the last time I'll bring up that subject.

I would advise you do that, as opposed to further embrassing yourself in front of the hammie community and claiming they are illegal because you are unable to find a rule by the FCC permitting them, as you have maintained for your illogical reasoning.

>In part 95 (Have you ever read it?), the FCC

>specifies both permitted and prohibited

>transmissions. The fact that a ETS signal is

>not specified under permitted transmissions,

>and the fact that "sound effects" meant solely

>to "amuse or entertain" is called out

>specifically under prohibited transmissions is a
>strong enough case to lean toward the

>conclusion that ETS signals are not legal.

Again, only you take such a position,,all by yourself. You're wrong, Dave.

>In any case, I am waiting for the FCC to

>respond to my query. I'm sure they are busy

>and I might not hear back for a while.

Dave, don't hold your breath. I am of the belief the person in charge of such responses from the FCC is an alcoholic and is having much more difficulties than concern for answering a inquiry from an extra concerning a law he should already be informed.

>That's the really funny part about this whole

>thing. Twist will sit here and spin and

>obfuscate and make all sort of excuses to

>deny that what he (and you I guess) does is

>illegal.

>But the law is clear on this.

Everyone is clear on the law but you.

>Yes, you clearly disregard it.

You have no clue about the law,

>You have no clue about a clue. The law isn't

>some "a-la-carte" set of rules that you can pick
>and chose from which you want to follow or

>disregard.

It worked for you, why can't it work for others? Oh, that's right,,this
is where your hypocrisy is illustrated.

-
And your invocation of "forensics"
had no relation to what you were trying to say, yet you erred and
claimed it did. Tell us, Dave, how is your "process" legally related?

>It's not.

Exactly, but you claimed you used forensics..not "like" forensics, you
said you used it.

> But forensic criminalists use technology and a
>process of analytical investigation to piece

>together clues and evidence to paint a picture.
>THAT is not much different than what I was

>talking about.

You watch too much tv. It is very different than what you claimed. You
claimed you used forensics in your reasoning. Since learningwhat a gaffe
you made, you are attempting to clean it up by saying forensics are
"similar" to what you did, but that was not your original claim. You
claimed forensic reasoning was used by yourself. Again, and in tandem
with so many of your other positions today and this week,,you are wrong.

>Once again, you become hung up on literal

>meanings, so much so that you can't see the

>forest for the trees.

Once again, the legal relation and connotation the word refers is sound
and can not be detached from its definition, even when cries of what you
really mean when you misuse the term are taken into consideration.
You
were to look up the term and learn its definition prior to using it in
the futire so as not to embarrass yourself again.

>There is nothing wrong with the context in

>which I used the term.

See above.

>Which part? The part where you demonstrate

>your ineptitude in the english language and an
>uncanny ability to not understand context?

You have proved yourself by far the better demonstrator today.

>You want to know how many hams agree with

>this, then post the question on one of the ham

>newsgroups and see who agrees.

Damn, Dave...you are suffering like never before. Twas yourself that
invoked other hammies with imaginary support, not I.

>I never mentioned any hams.

You did, invariably.

>I did nothing of the sort. You made the

>assumption that I was talking about hams

>when I said "there are others". But nowhere

>did I mention hams.

I said you are the ONLY hammie to make such a claim, to which you
responded, "No, I am not the only one". If you think that reply allows
for others besides hammies to my direct quote, then you have a great
deal more problems with communication technique than has been
illustrated.

_
  I see we will have to rely on the group's
memory and pc skills and not yours, again.
"The Group" is non-existant, as far as you are concerned. No one has
ever backed up any of your absurd claims. You are alone in your
position.

>You are the one who wants to know how

>many hams agree with the notion that roger

>beeps are illegal on CB.

  I said nothing of the sort. In fact, I will reiterate it once
again for you, so as the others won't have to.

>"Other's" never have. The obsession you have
>for me is yours alone.

Not when you continue to accuse me of bringing up legalities, say roger beeps are illegal, see imaginary hammies, and can't see the hammies who correct you.
Your response to me led to *you*
invoking other hammies. I said, and I quote, that "you are alone in your claim that roger beeps are illegal."
In order to lend yourself a transparent but false veil of support, you claimed, in response, "No, I am NOT the only one", whcih has only one meaning in response to my claim. Your claim, means that other hammies support your claim and agree with you, the exact opposite of what I claimed, maintain, and brought to your attention.

>How does my claim of "I am not the only one"

>mean that those people are automatically

>hammies?

See above.

>Are hams the only other radio op's in the

>world? Especially considering that this is a CB
>newsgroup, you are way off-base.

>You jumped to another conclusion and

>committed yet another bifurcation fallacy.

Again, and for the
record, I maintain NO other hammie agrees with you.

>A claim of which you cannot verify.

And neither can you when you claim others agree with you that roger beeps are illegal.
Case closed on your fingers.

>You can't possibly know what every ham

>thinks. The fact that you frequently make

>these sort of "The world is on my side" claims

>is why your narcissism is so easy to believe.

I'm not the one seeking approval of others, in fact, you were instructed long ago I am a loner and play better alone, but that has nothing to do with my thoughts being in the mainstream concerning this hobby. but what I feel and think shouldn't concern you so much. I believe it is coming face to face with confidence you have never experinced before that is upsetting to you, as it has you cracking up.
-
You said you were
not the only one, I asked you to name one that agreed with you, and you began to sputter and sink.

>I only refuted your assumption that it had to be
>another ham.

You are really lost, Dave,,,,that's not what you did at all,,,,you refuted the assertion you were not alone in your belief, yet coninue to struggle with this issue. Try and keep up.

>So, I suggested that you ask them.

What you have been claiming isn't what has been taking place at all. In fact, your last few posts are chock full of delusions and falacies.

>All of which have been committed by you.

Again, Dave, accusing all who you disagree with of wronging you is a dilemma.Firts it's Frank messing with your head, then, on the heels of your errant behavior, you invoke the laws, and claim I invoked them. You invoke the topic of legalities, and maintained i invoked hem. Oh Davie, I hope you get well.
Is everything ok over there? Perhaps the stress of having to sell the overpriced boat is too much for you to handle these days.

>Ah! You've been perusing my website.

Talk about narcissism, my goodness.

>I knew

>you couldn't stay away.

And as you always are these days,,,, you are wrong, but your position is forgiven because you are so sick these days.

>I hope the HTML isn't

>too much for WebTV to handle......

>And I can add boat values to the list of things

>you know little about.....

Tell us about it, Dave, you can add it to your endless and superior knowledge of the law.

>David T Hall Jr.

>"Sandbagger"

>http://home.ptd.net/~n3cvj

Depends on the state. Most states give you 10% leeway for differences in speedometer calibration. Oregon doesn't have speed limits in most places, opting for a less strictly enforced posted speed (difference is the posted speed signs say SPEED, whereas hard limits say SPEED LIMIT). In either case, if conditions are bad, you can get a speeding ticket for going slower than the posted speed (ie, doing 50 in a 60 zone on ice).

Jim,
There's been no " years of conditioning " with your call. You're just
a typical hammie that thinks your call is somehow important or makes
you important.Truth is the normal people (NON-HAMS) around you think
you're an idiot!
In fact you're probably a complete pain in the ass to your family and
those around you.

No they don't. The speed limits signs or laws do not say 55 or 65, +/- 10%.

That is nothing more than the descretion of the cop that tickets you.

It's good to see that you are asking for clarification instead of
asserting your own assumptions regarding my statements, but the
question still smells of speculation. I can't make this simple enough
for you to understand, but it should be simple enough for most
everyone else. All I ask is that you -try- to keep up:

If you are going to assert an absolute conclusion then you must
eliminate -all- other possibilities, probable or not. Doyle clearly
confirms this by inclusion of the phrase, "however unlikely". Yet
Doyle's process of elimination is, in fact, self-contradictory -- the
argument attempts to ascertain an absolute conclusion by excluding all
other possibilities -regardless- of probability. Now if there is any
possibility of the existence of an omnipotent God then there must be
an -infinite- number of possible causes for any given event. But you

don't need to believe in God to understand the infinity rule. Both the
Heisenberg principle and quantum physics maintain that random events
can and do occur without cause, and both are proven scientific fact.
The big problem is that we live in the real world, and that both our
resources and ourselves are finite. Therefore, the application of the
process of elimination, to the exclusion of -all- other possibilities,
likely or not, is ultimately impossible.

The principle is no more than a temporal exercise in philosophy.

>>Once again, Doyle wrote fiction.
>
>And once again, the principle is sound.

The priciple is sound in structure but not in practice.

Molecular transformation? EMP? Wormhole? Gamma radiation? Solar flare?
Or how about divine will? In order for Doyle's argument to be
practical then possibilities such as those -must- be eliminated.

Change is absolute. Unless the Universe locks up and freezes solid,
change is both continuous and infinite. Therefore, there are an
infinite number of absolutes. This is true -regardless- of what you
believe. Dave, don't you see how your belief system is interfering
with your reasoning processes?

>Any good troubleshooter will tell you that there is a percentage of
>probability that certain components will fail. There are also a finite
>number of probable causes for failure. That's why we tend to look in
>certain areas first.

Any good troubleshooter won't jump to any conclusions. "WE", referring
to -good- troubleshooters (and doesn't include yourself), begin with a
thorough observation -- functional testing and inspection. When the
symptoms (or lack thereof) have been determined then WE use logic to
determine what circuit or circuits are affected or responsible. Then
WE use further testing to narrow down and isolate the faulty component
or components. And then WE use the same logic to determine what caused
the component or components to fail. The troubleshooting process has
-=NOTHING=- to do with probability -- if it did then it would be
called "troubleguessing", which is what -you- practice as evidenced by
your own statements.

The subject was not about the types of capacitor failures; it was
about your presumption that the fault was due to the failure of a
capacitor.

Why? I had already stated that I, like yourself, had never seen the
problem occur. I only asserted that it was possible and you agreed.
Nothing more needed to be said.

>>Oddly enough, I have seen caps blow more often in solid-state
>>equipment.
>
>The world is full of mysteries. That's what makes it interesting. But
>at least you admit that caps do blow.

Dave, for the SEVENTH TIME, I -never- said they didn't! Do you have a
reading comprehension problem? Is there some other language that you
understand better than common English? Or do I need to repeat things a

dozen times or more before a simple concept finally soaks into your
thick head?

>>> In the solid state equipment, cap failures are
>>>less obvious and usually not total. On older radios (25+ years) the

>>tolerance (unless there was a total failure). On the contrary, I
>>-have- seen such deviation much more frequently in high-voltage power
>>supplies. You call it "drying-out", I call it "aging" -- it amounts to
>>the same thing.
>
>Yes, it pretty much does amount to the same thing. I am puzzled that
>you've never seen large value changes.

You are puzzled because you can't read. I said, "I have rarely seen
caps in solid-state circuits deviate significantly from their rated
tolerance (unless there was a total failure)." I -didn't- say "never",
and I -didn't- say that the variations weren't large. Electrolytics
usually have a very wide tolerance range. I have measured -plenty- of
caps that did not match the labeled uF but -were- within the specified
tolerance.

> Ceramic "disk" caps are pretty
>good at holding value.

They usually have a much tighter tolerance than electrolytics.

> I have seen some mylar caps change though.

Never seen mylar caps deviate from their tolerance (unless they were
fused). I -have- seen many paper caps that way out of tolerance.

> But
>small electrolytics are known for value changes. The thing is that you
>normally won't know it unless the cap is critical to the stability to
>the circuit.

If the designer didn't account for variation within the tolerance of
the component then that's a design flaw.

>I have had low audio gain problem is CB radios where the problem
>turned out to be a nearly open electroyitic coupling cap. Not once or
>twice, but many times. These problems started happening (not so
>coincidentally) when radios started being made in Malaysia and other
>"low budget" shops.

I have seen similar problems many times, and it is not the result of
"drying out". The failure is almost always attributable to the AC
peaks swinging above the DC rating of the cap.

And before you go on a rant about how there is no AC, I'll explain it
in 1920's terminology so you can understand it: Given a cap rated for
16 volts DC, with DC bias of 14 volts, and a -signal- that swings from
10 to 18 volts (which, in contemporary terminology would be described
as having an 8Vp-p AC component and a 14VDC component); the signal
peaks would then exceed the voltage rating of the capacitor. The
result is that holes are repeatedly poked in the dielectric. Over time
the dielectric erodes and the capacitance decreases (unless the cap
shorts through the holes first).

Regardless, the root cause is usually either a flaw in circuit design,
the failure of another component, or improper alignment.

>>>>Well, if the AC resistance of the leaky cap dropped because of the

Yes it is. What's your point?

>It's misleading to state that one type of current has another type of
>current as well, and then back pedal and state that that component is
>zero. Then why bring it up at all?

Because you can't comprehend the concept as it relates to the topic,
which is the AC resistance of a capacitor.

>>
>>Basics, Dave. Learn the basics.
>
>I know the basics. 120 hz is the fundamental frequency of a full wave
>rectification, not a harmonic of it.

Wrong. 120Hz is a harmonic of the 60Hz source after being affected by
a non-linear function. And for the sake of mentioning it, rectified AC
contains a multitude of harmonics of the source -- it is not a 120Hz
"fundamental" frequency. If you have a spectrum analyzer you can prove
this to yourself. Begin with a sine of any frequency, put it through a
full-wave rectifier, then look at the spurs. You will no doubt see a
large spike at the 2nd harmonic of the source, but because the
rectifiers in the bridge can never be perfectly matched you will also
see a spur at the FUNDAMENTAL! If the 120Hz after rectification -was-
a fundamental then it would NOT have harmonics -below- it!

Go back to school, Dave.

>>>>>>The term "ripple" is old and has been replaced by "pard", which

>to be, and illustrated why those parameters are irrelevant for the
>linear supplies we are currently discussing?

No, for twice asserting the fact that terminology changes, a fact that
you refuse to admit when addressing the term 'Alternating Current'. So
again, I accept your apology.

>>>>So if you have a cap connected between a DC

Well, that's in total contradiction to your explanation of the
operation of your battery charger when you claimed that the battery
acts as the filter capacitor. So which is it, Dave -- is a capacitor a
capacitor or a battery?

>>>>>> When
>>>>>>the load becomes large then so does the ripple, and if the cap has a

>>>the cap is a non-polarized electrolytic, like the type commonly found
>>>in audio crossover circuits and other places.
>>
>>
>>You're stalling with semanitcs, but even -then- you are wrong. Say
>>your PS cap is charged to a DC voltage. When the power supply pulls
>>the ripple to it's peak then current is flowing -out- of the cap. When
>>the ripple bottoms out then current is flowing -into- the cap.
>
>You've got that backwards. When ripple peaks, the cap charges. When
>the ripple ebbs, the cap discharges.

You are right, but it's not backwards at all.....

When the ripple peaks the cap -does- charge because electrons are
flowing -out- of the cap (assuming we are both talking about a
positive supply and the negative end of the cap is grounded). When the
ripple bottoms out the cap is discharging, meaning that the current is
flowing in the opposite direction; i.e, electrons are moving -into-
the positive plate.

The result is that the current does indeed alternate. The capacitor
passes an Alternating Current; i.e, AC. Is any of this sinking in yet?

>>You
>>have described the very same action at least twice. The problem is
>>that you didn't even know that AC stands for "Alternating CURRENT"!!!

>
>I am an engineer Frank.

Not an electrical engineer. Are you a train engineer? Sanitation
engineer? Or do you just work on a road crew? The latter might explain
why you think a "short break" from work lasts over an hour.

> Tech school was my first taste of formal
>education, which I attended starting when I was 15 years old. Theory
>was a part of the curriculum, but it was closely accompanied by lab
>experiments where we could "put the theory to work" in actual
>practical circuits.

So you built a color organ in a high-school industrial arts class.
Whoop-dee-doo, so have lots of other people.

Alright, since you want to compare resumes:

I started with a dry-cell and a spool of wire when I was 7yo.

I got an old Heathkit 19-in-1 kit when I was 9.

I was mentored in electronics by Stan the Speaker Man (here in
Spokane) until I was 14, when he died and I started my own TV/radio
repair business.

After high-school I went into the USMC where I was trained as a Ground
Radio Repairman (2841) at 29 Palms (MCCES). I worked on anything from
the diminutive PRC-68 (VHF walkie-talkie) to the MRC-110 (1kW mobile
HF), as well as wired comm systems (mostly TA-312's), power supplies
(including the one in Ollie North's office), and just about anything
else that conducted electricity.

After the USMC I worked in two different commercial radio shops until
I went back to college (I got some credits from UNC while in Lejeune).

Graduated from EWU with a BS in Electronic Engineering (a specialized
Electrical Engineering degree) with a minor in Communications.

Started my own part-time shop doing most anything electronic,
including professional audio equipment, ham radio repair, radio and
amp restoration, custom circuit design..... as well as subcontracting
for other companies/radio stations. IOW, just about anything old or
new that pays money.

Worked as an engineer at JM (now Honeywell) for a year, designing a
machine that processes the lids for uP chips made by Intel and other
manufacturers (probably even one that's in your own computer).

Worked as a quality control engineer at HP for a couple years.

Worked as a BE at a local radio station until last fall.

All the while I have been in the hobby of CB radio, including being a
part of the original Jacksonville keydowns in the early 80's while I
was stationed at Lejeune.

Now what is it that -you- do for a living, Dave?

>>>>The cap is in parallel with -both- the source and load impedances; and

>truly is?

Which is -exactly- the point that I'm trying to get through to -you-!
You don't need to play with RC time constants because such an analysis
is compounded by more issues than are in your vocabulary. OTOH, the
function of the cap is better described as a function of it's AC
resistance, a much simpler and broader concept that you seem bound and
determined to debunk!

And BTW, the oscillator, transmitter, and double-balanced mixer
circuits are much simpler than a power supply.

>>>>Also, the capacitance of an electrolytic isn't a
>>>>constant; it's non-linear with respect to the voltage (a factor of
>>>>it's AC resistance, and another reason why audiophiles prefer motor

>>and assumes that both the resistance and capacitance are constants.
>>What I said (and what you are ignoring) is that the capacitance of an
>>electrolytic cap is -not- a constant.
>
>Isn't that what I just said?

No. Let's try this again, and this time wear your glasses: "The RC
curve.... assumes that both the resistance and capacitance are
constants." Now, Mr. Engineer, what part of that don't you understand?

>> And because it is not a constant
>>the RC curve does -not- follow the same path that it would if the
>>capacitance -was- a constant. And BTW, the RC curve becomes a straight
>>line when the current is constant because the charge rate of the cap
>>is a fuction of current, not voltage. This is yet another example of
>>your inability to distinguish current and voltage.
>
>Are you trying to say that an R/C time constant is a straight line? I
>sure hope not.

Put on your reading glasses again, Dave. I said the curve was straight
"when the current is constant". It's the basis of the fundamental
circuit used for making triangle and sawtooth waves. And if you
couldn't understand that much then your crappy tech school should have
failed you, and you certainly never earned an electrical engineering
degree.

> If not, then you agree with me.

That's what I used to call 'Twisty-logic', but as of now I'm going to
rename it to encompass a broader definition -- it's now called
"stupidity".

>>>> Both these nonlinearities end up converting
>>>>your overly-simplistic R/C time constant analysis into an integral
>>>>function.
>>>
>>>Call it what you will. My "overly simplistic" analysis covers the
>>>conditions of what is actually happening.
>>
>>
>>It's clear that you have absolutely no clue as to what is actually
>>happening. Learn the basics, Dave.
>
>I know the basics. I also know the more advanced stuff.

ROTFLMMFAO!!!!!

>>>That sounds like double talk. How can a simple concept be described in
>>>overly simplistic complexities?
>>>
>>>> It's like you are trying to describe baseball
>>>>with dumbed-down Newtonian analysis. You still think you can write a
>>>>course on the subject? I don't think so.
>>>
>>>It's time to remind you of Occam's razor. I tend to use simple terms

>>>necessary. My explanations were just that. I could have gone to the
>>>trouble of mathematically explaining the whole deal, but that would be
>>>far more effort than this thread deserves.
>>>
>>>The complexities have been introduced by you in an effort to discredit
>>>my explanations. While you can't deny them, you can inflate their
>>>complexity and then accuse me of not explaining it thoroughly enough.
>>
>>
>>You are once again confused. In your attempt to demonstrate that you
>>know what you are talking about you have ultimately proven that your
>>understanding is poor at best. THAT was my point, and THAT is what is
>>evident from your technical explanations
>
>Perhaps it is not me that needs a refresher course in electronic
>theory. It would seem that real life experience has paralleled my

>understanding of the hows and whys and has contradicted what you have
>said. In other words, I have seen nothing in my 35+ years of playing
>with and repairing radios that goes along with your observations. But
>I have seen many that have agreed with mine. Now, unless you want to
>make the case that the laws of physics works differently on the left
>coast, I would tend to question your depth of "knowledge".

Everything I have said can be easily verified by anyone who can read.
You can't read, which explains your pathetic understanding of basic
electronics.

>> Maybe you think you can leaf
>>through a few textbooks, speed-read a few concepts, paraphrase them
>>and try to pass them off as if they were integrated into your
>>education.
>
>That's what it seems you have been doing. Only you forgot to read the
>part about caps drying out.

Where's that book, Dave?

>> Well, you can't. I've been in the field long enough to
>>recognize that scam and it doesn't work. It didn't work for Skippy, it
>>didn't work for Toll, it didn't work for Eitner and it won't work for
>>you. But please don't stop trying because I find it very entertaining.
>
>Maybe you are the one who doesn't know what you are talking about
>Frank. You've gotten into "discussions" with other people before and
>tried to play that game. In some of those cases the stuff you brought
>up was a bit off-the-wall, and contrary to accepted practices. The
>whole "coax length" debates come to mind.

You mean when CLP falsely claimed he had a copy of the book I used for
a reference? Sure, why not. You have already pushed this discussion
well beyond the boundries of the original topic, so why don't we
revisit the coax length debate? But just know that it's not going to
detract from the fact that your electronics education is woefully
lacking, your claimed experience is probably 'overinflated', and your
troubleshooting skills have no logical or scientific methodology. So
yeah, let's do the coax thing again. Just what was it I said that you
consider to be "a bit off-the-wall"?

>>>>>>So when is your book coming out?

>>>No, but it is doable.
>>
>>
>>Another flip-flop. Make up your mind -- is it easy or not?
>
>Depends on the equipment and the application.

That's a cop out.

>Not easy does not mean impossible, or even improbable. It is easy to
>eliminate the majority of common practical causes. In most cases, the
>cause will be found during this process. In those rare cases where the
>cause is not part of the statistically probable causes, a little more
>investigative time may be involved. Troubleshooting is all about
>knowing the statistics. If you get in a piece of equipment that shows
>a common failure that you've seen before, would it make sense to check
>unrelated parts, or would it make more sense to go where the previous
>faults have been found?

You said, "it's easy to eliminate practically every potential cause".
When I said that it's not always easy you replied with, "No, but it is
doable." Now you say it "depends" and obfuscate your flip-flop by
getting all wordy and begging for vindication with a loaded question.

Despite your wishy-washy position, I'll answer your question by saying
this: Troubleshooting by playing the odds (statistics) is for people
who do not understand the purpose and function of the circuit and all
it's components, because if you -do- know how they work then there is
no need to make guesses. As a perfect example, read the early posts in
this thread again. You will note that both Lance and myself asked to

see a schematic. OTOH, you blurted out that the cause of the problem
is "almost always" a capacitor. That's not troubleshooting. That's
troubleguessing.

>>>><snip>
>>>>>>>You are right, in a sense, that you can't always tell what DID cause

>>Isolation failure in the line transformer can easily put a couple
>>hundred volts on your 12 volt supply. Seen it a few times (twice with
>>Pyramid power supplies -- cheap transformers that are too small for
>>the rated output).
>
>Never seen it happen. A breakdown of transformer insulation will
>usually result in a short and a blown fuse.

A shorted winding usually results in an overheated transformer because
most people defeat the purpose of the fuse and replace blown fuses
with bigger ones so the equipment will keep working. But the isolation
I was referring to was between the primary and secondary windings.
Many cheap power transformers have poor isolation between the
windings, and some have none at all. Primary shorts to the secondary
and you get lots of unwanted EMF on the secondary. You -have- worked
on Pyramid supplies, haven't you?

>>>>Many, simply because the cause of a failure isn't limited to internal

>>>>forward voltage drop characteristic of a typical silicon diode, but it
>>>>was supposed to be -twice- that drop.
>>>
>>>Ah, so instead of a 1.2V drop, it was only showing .6V? A change in
>>>bias can certain cause a problem like that. But your example does not
>>>negate my statement. You found that another component failed, which
>>>resulted in a chain reaction failure. The cause of the failure was
>>>found. But if you can't pin down the cause of failure to any other
>>>component, you are left to consider that either the bad component
>>>failed on its own, or it was subjected to a momentary stress beyond
>>>its limits through some external event.
>>
>>
>>Actually, it was a design flaw. The diode was supposed to be thermally
>>connected to the heatsink, but was mounted such that the thermal link
>>was nothing more than a blob of heatsink grease. The grease dried out
>>and the redidue became a very good insulator. Regardless, my point was
>>that the failure is not always intrinsic to the circuit or device;
>>many times the problem is caused by outside influences, such as
>>improper operation or maintenance, poor design, manufacturing flaws,
>>etc. And many of those faults are not always evident; i.e, they don't
>>leave evidence of the cause of the failure. The fact is that there was
>>no evidence of the cause of the failure in the Peavey. I learned of
>>the cause after harassing Peavey tech support until they forked over
>>the info (I really think they try to keep faults like that a secret
>>because they make so much money on spare parts, but I suppose that's
>>just one aspect of modern business practices).
>
>So you finally found the source of the problem. You simply found
>another possibility to consider. It was nothing magical.

I never said it was.

> The next time
>you see an amp like that with the same problem, will you not then
>check that diode first? That's what I mean about experience and
>statistical probability.

I check the diode, but not first, and I don't assume that the diode is
the problem. Quite the contrary; the problem is usually a power
transistor that shorts. And for the sake of anyone reading this for
info on the amp, I highly suggest replacing the MJ15024 and MJ15025
with those Korean-made transistors. When they go bad they blow open;
almost every other brand (including Motorola and Peavey in-house
stock) will short and blow the rest of the amp.

>You might have half a leg up on me in pure theory, but you are
>seriously lacking the proper mindset to be an effective
>troubleshooter, as you don't seem to grasp the analytical mindset
>that's required or the practical application of your theory.

I don't use statistics, I use logic. It's much easier, more effective,
and in over 30 years of my career of repairing an extremely wide
variety of electronic equipment, -NOTHING- I have -EVER- fixed has
come back to the shop because I didn't fix the problem correctly.
(Thank you, Stan, wherever you are.)

>>>>So there are -many- possibilities that may or may -not- be obvious.
>>>
>>>I respectfully disagree. There ARE other possibilities yes, but I
>>>disagree that there are "many". A simple process of elimination will
>>>whittle that number down to a few highly probable possibilities.
>
>>A shorted resistor is not "highly probable", nor is a half-shorted

>
>Is a shorted resistor the first thing you consider? The PC trace
>crack?
>
>The double diode should have been on the list though. As one of the
>components that set the bias, it would be highly suspicious in a
>cascade meltdown of several amp stages. At least it would be to me.

You don't have a clue, Dave. When you fix your first 1.3K then maybe
we can talk. Until then, don't even -TRY- to guess.

>The incorrect slug is a interesting one. If the radio once worked,
>there is no way that this could happen. If you were told that someone
>else tried to fix it, then I would be looking for things like that. I
>have seen similar problems with "Screwdriver Tech" mods. Undoing
>improper repairs is another statistic to consider.

I don't need to be told if someone fucked with the radio or not. The
paint could be cracked, the wax disturbed, and sometimes there's even
ferrite dust in the hole or slot from some idiot using the wrong tool
for the job. Even if they got the core out and replaced it with one
they found in their transistor radio, it's easy to tell that the wrong
core was installed when an adjustment won't give the expected results
(all else being the same). Most screwdriver techs (like yourself)
don't realize that those cores, aside from having different sizes, are
made of various materials with different permeabilities and frequency
characteristics. One core may look exactly the same as another but

many times they aren't and are not interchangeable. And I would guess
that this ignorance accounts for at least a quarter of the radios in
my scrapheap.

But once again, just because some bonehead played with the screws
doesn't make me jump to the conclusion that a slug is the problem,
statistics or not.

>>>>>>>It's like forensic science. We reconstruct an incident based on the

>You are starting to adopt the tactics of a certain fruitcake who also
>resides here.

I was just suggesting you clear up your ignorance by learning a
definition which, until now, you have only assumed was correct.

>>What you initially described is called 'failure analysis' (or 'crime
>>scene analysis', as per your example). The term "forensic science" is,
>>literally, the -presentation- of a scientific analysis.
>
>For legal purposes.

Sometimes. Forensics is about presentation. For a brief time I was a
member of the Forensics club in college. The various subjects included
debate -as well as- many other aspects of speech. The word "forensics"
is probably one of the most commonly misdefined words in the English
language, probably because people watch too much TV (and yes, I used
to watch Quincy).

> But the methodologies employed by criminalists is
>similar.

The methodologies employed by criminoloists is nothing more than the scientific process. A forensic criminalist is a criminalist whose job includes the presentation of the evidence. Even -you- could consider yourself a forensic criminologist -- you have presented evidence that you are a criminal.

>>>>>I have a battery charger which is unfiltered (the battery acts as the

>should last for years under those conditions, as would be expected.

Then try it both ways.

>I have yet to see an electric space heater than runs on 12 V. The
>current required would make it impractical. My space heater draws 12
>amps at 120V. At 12 volts, it would have to draw 120 amps for the same
>wattage.

This is another excellent opportunity to further your education. You claim that the heater draws 12 amps at 120VAC. Ok then, measure it's resistance cold. If it's 10 ohms then putting it across 12 volts will only draw 1.2 amps from your battery charger. But if it's less than 10 ohms then you just learned a lesson about lightbulb filaments.

I await your raw exit-poll data.

>A stove element might work. I'll have to measure the resistance and
>calculate the load.

Gee, now why didn't I think of that.....

>>>>>Why use a light bulb to do a zener's job?
>>>>

>>>>>10 times higher than the same wattage bulb in a 120 V configuration.
>>>>
>>>>
>>>>True, but the cross-sectional current density must be the same in
>>>>order to reach the same temperature where it emits the same spectrum.
>>>>So why would a thicker filament last longer?
>>>
>>>It's physically more durable. Less prone to shock damage.
>>

>>
>>I don't buy that simply because an auto bulb encounters much more
>>shock and vibration than most household lightbulbs.
>
>Which is the point I was making. A household light bulb would never
>last under the conditions found in an automobile. The filament in an
>automotive bulb is thicker.

Then why not just make the filament thicker in a household light bulb?
The resistance would be lower but that can be compensated for by
increasing the length, right?

>>And UV bulbs have
>>a much thinner filament than a standard white bulb (to achieve a
>>higher temperature, and therefore a higher part of the spectrum), yet
>>they don't seem to burn out significantly faster. So your explanation
>>is still lacking any substance.
>
>Compared to a 12V UV bulb?

Where did I say anything about a 12V UV bulb? My comparison was of a
UV bulb to a standard white bulb. I made the mistake of assuming you
would know I meant the two bulbs use the same voltage -- shame on me.
So I'll rephrase, and be even more specific so it's harder for you to
come up with another excuse to avoid the issue: Three incandescent
bulbs, all rated 120V, 40 watts. One is UV, one is standard white, and
the third is a red darkroom bulb. The main difference between the
bulbs is the filament. Your question, Mr. Engineer, is why do all
three bulbs last about the same length of time despite your claim that
longevity is related to the thickness of the filaments?

>>>>>>Well, I'm an engineer, you know me, and I haven't ever used the term

>>>
>>>.5 mV won't even tickle the modulation in most radios. Certainly not
>>>enough to make 100%.
>>
>>
>>Geez Dave, can't you read? The spec was 0.5mV for -50%- modulation.
>
>My book says 5 mV for 50% modulation.

So you have said three times already, and I read it each time. What
-you- didn't read is your erroneous statement that 0.5mV is not enough
for 100%, to which I pointed out that the spec was for 50% modulation,
-not- 100% modulation. Are you really this stupid or are you just
playing the fool?

>>And yes, it will most definitely "tickle" the modulation because mine
>>is set just as described and it works dandy. BTW, your lack of both
>>experience and education is showing
>
>Yea, it's showing that you put your foot in your mouth, and you don't
>know how to back it out and still save face.

Considering the alignment is for uncompressed modulation and -not- AMC
as you suggested, and that the spec works fine -regardless- of your
personal opinion that it can't, I would say that your foot-in-mouth
comment is an indication that you are suffering from the malady
yourself.

>> -- typical output of a dynamic
>>microphone just -begins- in the low microvolt range. We're talking
>>-60dB or less. The dynamic range of a human voice isn't that great,
>>barely 20dB, yet the dynamic range of CB AVC circuits (or AMC, AGC,
>>CVA, etc) can be anywhere from 40 to 60dB, which is such a wide range
>>for a number of reasons, not the least of which is the wide variety of
>>microphones, voices, and distances between the mics and the voices.
>
>
>>And 0.5mV is plenty for 50% mod, especially when the radio's mic
>>sensitivity is specified for 1.0mV minimum at 50% mod.
>
>Then .5 mV would make about 25% modulation. Not enough to set any
>alignment points.

Ever consider the possibility that the alignment procedure calls for
measuring the mic input with an AF VTVM using a demod probe? IOW, the
measured reading during the alignment is half the actual Vp-p at the
input; which, when corrected, just happens to be the spec for the
radio. The two specs are fully consistent with each other. Also, the
transmitter RF alignment is done with 500mV of two-tone audio at the
mic input.

Care to make more guesses in your attempt to discredit the manual?

>> I offered to
>>scan the page..... are you sure you don't want to see it?
>
>I believe you know how to read. But what you are reading is wrong.

I don't think so, Dave. The specs are consistent, the alignment works,
my audio doesn't sound "mushy and compressed" as you describe your's
after doing the alignment from the Sams manual (I'm assuming that's
what you are using even though you have yet to admit or deny it), the
manual and specs were provided to RS by the manufacturer, and every
argument you have used to discredit the source has backfired in your
face. So I really think this manual is accurate, Dave.

>> After all,
>>Uniden made these radios for radio shaft, so it was -Uniden- that

>>provided the information in the service manual.
>
>Are you sure about that? Are you also confident that the decimal point
>was not a typo?

Yes and yes. If the decimal point was a typo then they would have had
to make the same typo in three places, all regarding the same spec,
and all in a way that the altered specs are not only consistent with
each other, but that they work. Anything is possible, but I would
accept the single-bullet theory before I would accept your suggestion
that the spec is a typo.

>>Not like Sams which
>>got their info from reverse engineering.
>
>And you know this how?

Because that's how they made their manuals. You've been using them for
35 years and you didn't know that? TAB books did the same thing for a
while.

>>So which manual do -you-
>>think is more likely to be accurate, Dave? Don't you think Occam's
>>Razor applies in this case? Or is this another case for Sherlock
>>Holmes?
>
>Well, the issue becomes, one of our manuals is wrong.
>
>And once again Frank, the fact is that I can find NO other reference
>in any of my other numerous manuals (Some are factory) for dozens of
>radios which calls for such a low level of mike input. So now that
>leaves 2 possibilities. Either:
>
>A. You are wrong.
>B. Every one of my test procedures are wrong.
>
>Now what is the statistical probability of either of those choices?

You left out a few other choices:

C. At least one of your alignment procedures is wrong.
D. You are making this a personal issue instead of a technical issue.
E. You don't know as much as you think you do.
F. I am not a liberal.
G. Bush is a criminal.

I would list those choices as follows, from the highest statistical
probability to the lowest: G, C, D, E, F, A, and B. Your mileage may
vary.

>>>BTW, there is no "need" to bypass the LPF. It's just that the radio
>>>sounds better IMHO that way. The LPF overly restricts the audio
>>>bandwidth and kills fidelity. If you like sounding like you're talking

>>>into a paper cup, then fine. I admit that I'm somewhat of an audio
>>>purist. I like smooth "broadcast quality" audio. That's my personal
>>>preference. YMMV.
>>
>>
>>CB is not intended for high-fidelity. Passing the higher freqs widens
>>the bandwidth of the channel and makes it more likely to bleed into an
>>adjacent channel. That's one reason why CB mods are illegal.
>
>No kidding. But the audio BPF also cuts back on the very low
>frequencies as well. All I know is that the radio is more pleasing to
>the ear when the BPF is removed. From a purely legal standpoint, you
>are correct.

If your high-fidelity operation is creating a bandwidth that exceeds
the allowed bandwidth for CB channels then you are a criminal.

>>Regardless, you can get improved sound with nothing more than a better
>>mic. The stock microphones are usually designed for 300-3000Hz and are
>>as flat as the Matterhorn. Plug an electret into the radio and the
>>response flattens out, making it sound much better even -with- the LP
>>filter. This should come as no suprise since 3000Hz is a pretty high
>>frequency when compared to the human voice. Only Kate Bush could sing
>>-that- high.
>
>300-3000 hz is commonly referred to as "communications quality" audio.
>This is why most AM rigs have 6 Khz filters in them and SSB rigs have
>3 Khz filters. But people like to run D-104's on their rigs, and the
>BPF mod makes the radio sound better on those mikes.
>
>You and I can debate on which method makes more sense, and from a
>puritanical standpoint I would probably agree with you. But you have
>to remember, that when you are in business working on radios for other
>people, they don't want to hear that their mikes are junk, or that
>they should do this or that. They want the cheap and easy fix.

Maybe that's what -your- customers want.

> That's
>what removing the BPF gives them. It makes the rig sound as good as
>their last one on the same mike.

How about just aligning it according to factory specs?

>>>> Higher drive at mid-modulation will push the audio into

>>compressed" audio. I'm not the one who uses a book with an error in
>>the alignment procedures.
>
>Probability would suggest that yes, you did.

It's far more probable that you can't admit you have been wrong all
these years.

>> And I'm not the one who felt the need to
>>bypass the LP filter. I don't see any reason to even consider any
>>other possibilities. If it works, don't fix it.
>
>There's "works" and then there's "works better".

There's also "legal" and "criminal". Corrupting a sweet radio because
you are too arrogant to accept your own mistake is criminal.

>>>> My radio
>>>>sounds just fine without the modification, so it's very likely that
>>>>-your- book is in error.
>>>
>>>There is no error in my book. It correlates with other radio alignment
>>>procedures.
>>>
>>>Perhaps your book is in error. You assume that because it came from
>>>Radio Crap, it's infallible.
>>
>>
>>Wrong. I never assumed any such thing. You mentioned the discrepancy
>>so I referenced it's other specs, as well as specs from other radios.
>
>What other radios?

About a dozen or so RS models that use the same mic, as well as
several GE radios, a couple SBE's, Tram D-60, etc.

>>The only discrepancy is with -your- book. It stands alone in the
>>modulation procedure you described.
>
>No, in fact YOURS stands alone.

Now you are starting to sound like a little kid in a school-yard
squabble.

>>The question is, given how your
>>own description of the audio is indicative of misalignment, and that I
>>have a more authoritative reference that disputes yours, why do -you-
>>assume that -your- book is correct?
>
>Because it agrees with several dozen other books.

You should probably read those books a little more carefully. While you might expect the RS manuals have similar specs, I have many other manuals on hand and most of them (radios that use dynamic mics) only have specs for 80 to 100% modulation, which is typically set at 8 to 20mV (this is from the sample group I noted earlier). Since the mic range is quite wide and these specs are for radios that have some sort of compression and/or limiting, that lands the mic sensitivity spec of the TRC-449 pretty much on par with most other radios. The only real difference is that the RS service manual has an alignment to set the AM mod at 50%, a procedure that is somewhat out of the ordinary.

Regardless, the issue is the TRC-449. I have the original service manual and you don't. I understand why you are upset because it clearly shows that you have been using incorrect specs all these years, and unnecessarily modified an unknown number of radios because of it. You -could- blame Sams for supplying the wrong information. But you won't because you know as well as I do that the responsibility is ultimately yours -- you noticed a problem and failed to make a correct diagnosis. Instead you jumped to the conclusion that the LPF was the cause because bypassing it cured the malady. That's a 'symptomatic remedy' and is no better than declaring a fire is out because you pinch your nose and can no longer smell any smoke. Bad tech skills, Dave.

>>>My procedure is similar to what other radios also prescribe. After
>>>all, there isn't much difference in the output that a given stock
>>>microphone presents.
>
>>Wrong. I have lots of mics that have widely different levels. And the
>>useful dynamic range of any given mic can be 30 to nearly 100dB,
>>depending on the type. That's why one mic will sound great on one
>>radio but crappy on another, and vice-versa.
>
>That has little to do with actual output level and more to do with
>frequency response.

I might buy that if it were not for the fact that I can take almost any radio, plug in just about any mic through a preamp with a level control, and make the radio sound either great or crappy depending on where I set the level. Assuming the radio and mic are both unmodified, of course.

>>>The fact that your radio "sounds fine" is a matter of some
>>>subjectivity. I didn't say that the radios (Radio shack, Cobra and
>>>President versions of this chassis) that I've worked on sounded "bad",
>>>only that I felt that they sounded "better" with a modified LPF.

>>>
>>>Not at all. 5 mV is hardly too much audio drive. Both the mike preamp
>>>compression circuits and the modulation AMC were working properly. The
>>>compressed sound was due to lousy audio bandwidth,
>>
>
>>Or maybe it was due to a misalignment which caused a downward
>>expansion in a region where a flat response is intended?
>
>What kind of B.S. are you slinging now Frank? I could "align" that
>radio with my eyes closed. Please don't insult me.

You insult yourself by not accepting the possibility that you are
wrong. If you set the 50% modulation point to ten times the specified
input, assuming you are using the same mic, the result is downward
expansion -- great for ambient noise reduction but not audio quality,
and if you turn it up much higher it will probably sound like you are
speaking through a revolving door.

>>Naw, that
>>couldn't be it. You and your crystal ball must be right, Dave, it

That's not what I said, Dave.

>Politics is a matter of deciding which "side" makes the most sense to
>you, based a lot on faith. Local cannot begin to explain the hows and
>whys of the political mind.

To some it's based on faith. To some it's based on logic. To some it's
based on physical appearance, or emotional manipulation, or advice
from the psychic friends network. To some it's based on the sound of a
name, like "ray-gun" or "Busch". And to some it's based on the power
of suggestion, gullibility, or vulnerability to carefully devised
propoganda campaigns.

You have a 'tell', Dave. Not only are your lies easily identified, but
you responses have a unique characteristic that tells the motivation
for the lie; i.e, whether your lie was malicious, deceitful, etc....
or even to protect a secret (usually to cover up another lie). And
just so you know, I'm no expert in lie detection. I've only known one
other person who lied as poorly as you. She even tried to make a
career out of it. Now she's alone and miserable, just like you will be
soon if you don't learn something from this experience.

>names is non-productive and reactive.

"Names"? Sorry if the terms I use bother you. But you need to face the
truth of what you are. You are technically guilty of criminal behavior
no matter how many different ways you try to twist it, or excuses you
spit up to somehow trivialize it. Ham radio does not need guys like
you who disregard the laws you agree to follow when you sign on the
dotted line of your license.

>You ignorantly and
>erroneously call people criminals for dxing merely beacuse you are
>unable to distinguish between a civil and criminal nature.

It would seem that you cannot follow a simple train of logic. I have
provided the definitions of each and every term and demonstrated how
they fit the "crime". Your only defense is to call me names (Hypocrisy
in action) and accuse me of not knowing the law.

>Then perhaps you should address the problem and not the symptom...you
>know Dave, become proactive instead of reactive.
>
>>Ok, let's run with this. What do YOU think is

>confounded. But let's try and keep you focused for a second,,,,,speeding
>past 70 MPH is also "breaking federal law",,an analogy that has you
>writhing about.

Let's also put this one to rest. After some research, I have found
that there is NO federal 70 MPH speed limit. The previous 55 MPH speed
limit was repealed in 1995. States are now free to set their own
maximum speed limits, which ranged from 65 in some states, to 70 in
others, and 75 in yet a few others. I was also correct that Montana
had no daytime maximum speed limit for a time, but has since been set
at 75 MPH starting in 1999 which, of course, is higher than your
mythical "federal" limit.

See:
http://en.wikipedia.org/wiki/Speed_limit#Speed_limits_on_United_States_roads_and_highways

for a little overview education on speed limits.

>>You can't be fined $10,000 or spend time in

6) PENALTIES; ENFORCEMENT.--

(a) Any person who dumps litter in violation of subsection (4) in an amount not exceeding 15 pounds in weight or 27 cubic feet in volume and not for commercial purposes is guilty of a noncriminal infraction, punishable by a civil penalty of $50. In addition, the court may require the violator to pick up litter or perform other labor commensurate with the offense committed.

> Does that also make one a federal criminal,
>Dave?

Obviously no, and you'd know that if you did your homework.

And you have the nerve to call me ignorant on the law. You don't even know the laws in your own state. How can you possibly have any credibility on federal laws (Which you choose to break)?

>
>
>Most people ignore what does not exist.

You mean like the "federal" 70 MPH speed limit (chuckle)?

>>Once again, the 70 MPH speed limit thing was
>>not mine.
>
>>I never brought that up. In fact I was unaware
>>that there was a federally mandated 70 MPH

Yep, I learned that you're smoking something once again, as there is
no federal 70 MPH speed limit.

>
>> and a few states (Montana I believe
>>was one) actually had no speed limit on some
>>highways. The increase in accident rate then
>>forced them to impose a state mandated limit.

>What the hell does Montana have to do with the federal 70 MPH law?

Nothing, as there is no federal 70 MPH law. Montana, currently has a
75 MPH maximum. I guess the feds should be knocking on Montana's doors
eh?

>Yet, that has never stopped you from talking sideways about a topic you
>invoke often but know little of...radio law.

Coming from the guy who pulled a mythical federal 70 MPH speed limit
out of his hat, and doesn't even know the laws of his own state, I
find that rather amusing.

I'll await your response (as if you had the self control to resist),
come Monday morning, when you return to the psyche ward.

In Pa. they are required to give 5 MPH to take care of "Speedometer"
and speed measuring inaccuracies. In addition, just to avoid court
challenges to the precise accuracy of the speed measuring equipment
(Usually VASCAR on non-state patrolled roads, and RADAR on state
police patrolled roads), most of the cops I know tell me that they
unofficially give people 9 MPH over the posted limit before they start
pulling people over. Of course there might be a new hard-assed rookie
who might not be so "kind".....

>
>No they don't. The speed limits signs or laws do not say 55 or 65, +/- 10%.
>
>That is nothing more than the descretion of the cop that tickets you.

That depends on the state. Some states (I believe Maryland is one)
have what they refer to as "Zero tolerance" 65 MPH. They can bust you
for 66, or so I've been told. I don't know how many cases have been
fought over speedometer or other potential speed inaccuracies and how
well the "zero tolerance" aspect has held up.

Most car speedometers are not so accurate that a 1 MPH difference is
all that hard to believe. Just putting one size larger tires on your
car can make that difference.

People have fought a speeding ticket on this basis and have won.
That's part of the reason why Pa. gives some leeway. Most cops don't
want to have to appear in traffic court when the chances are good the
case could get thrown out. However, it's a lot harder to make a case
for speedometer inaccuracies when you're 10 MPH or more over.

Dave

>http://en.wikipedia.org/wiki/Speed_limit#Speed

>_limits_on_United_States_roads_and_highwa

>ys

>for a little overview education on speed limits.

How convenient. Polish those thick glasses of yours....

"This section does not limit the authority of any state or local agency
to enforce other laws, rules, or ordinances relating to litter or solid
waste management."

On a note that you failed to uncover, the feds enacted 70 MPH as a
mandatory speed limit in order for the state DOT to continue receiving
federal monies. Same process used for implementing drug-testing at large
companies. Want federal aid? Abide by our rules...
Same process used in many states.

>In June 1999, Montana joined the rest of the

>nation and imposed a maximum speed limit of

>75 mph (120 km/h) on its Interstate highways

>You can't be fined $10,000 or spend time in

>jail for speeding.

You most certainly can get jail time for
speeding, Dave. Prior to educating you on this item, I note that you
once again attempt the invoking of the monetary amount as criteria
(albeit, highly incorrect) for what constitutes a "federal criminal'.

>The potential

>is there for criminal penalties.

Same for speeding,

>Show me where you can spend any serious

>time in jail for speeding or be fined in excess

>of $1000.

Sure, Dave. Always glad to educate your loud and proud ignorance Any
speed greater than 15 MPH over the limit requires a court appearance.
Try doing 120 in a 55 and see what that gets you in some jerkwater town.

>Once again, you are wrong.

To which you, Eric, responded with
>better just to get a radio designed for 10

>meters that can do 100 watts. those amps

>tend to be very unclean (spectrum splatter

>machines). as for 11 meters, 4 watts RMS/12

>watts PEP is the rule.

To which my response was:
What amps would you be referring, Eric? I tend to believe there are
small amps on the market that are very clean.

Furthermore, in response to the assertion you made concerning 4 watts
being the rule, I invoked it was irrelevant to the poster's inquiry.

I then made to you the radio-friendly suggestion:
Hey Eric, fire up your ears and give a listen.
Air-a-zone-a is loud in my receive for the past
couple of days. Some of those guys get real
edgy when the sandpile stations key it up. Tell B-O-B I said hello.
Bayou Charlie is walking all all over him these days.

To which you replied:

>quoted someone else and tried to make it look

>like me? try again.

Loosen up, Eric.

Stay focused, Dave. Only you and Doug are transfixed with such topics,,,this is another of your topics, but the current topic you are having such dilemmas with, is your criteria you submit for holding a dxer a federal criminal simply. It's wrong, just as your position on other facets of the law (roger beeps), is wrong.

>But despite the fact that you have never been

>caught does not negate the truth of your

>commission of illegal actions in violation of

>federal law.

No one ever argued with you that such acts were illegal. You are roaming. Try and remain in topic.

>That IS the topic, and has always been.

No,,that is not the topic and has never been the topic of anyone except you and n8wwm who obsess on such things. Again, that is never the topic of anyone except yourself and Doug.

>YOU are the one who tries to twist and

>obfuscate the point.

Stay focused, Dave. Accusing me of bringing up the law, accusing me of making the topic of legalities, is so comedic, Dave. You are trying way too hard, or you are suffering serious problems.

>That's not what I said, Dave.

It's what you implied when I stated that politics transcends logic, to
which you replied that that was not the opinion of a "reasonable"
person. Tell me Frank, what would be "reasonable" to you?

>>Politics is a matter of deciding which "side" makes the most sense to
>>you, based a lot on faith. Local cannot begin to explain the hows and
>>whys of the political mind.
>
>
>To some it's based on faith.

To most it is based on faith to some degree. To believe in a
particular ideology, you have to have some faith that it is the
"right" choice.

> To some it's based on logic.

Logic can help bolster your core beliefs, but there is little about
the whole political process that can be explained by logic alone.

>To some it's
>based on physical appearance, or emotional manipulation, or advice
>from the psychic friends network. To some it's based on the sound of a
>name, like "ray-gun" or "Busch". And to some it's based on the power
>of suggestion, gullibility, or vulnerability to carefully devised
>propoganda campaigns.

Sort of like your blind refusal to consider "the other side" and the
discarding of any testimony to that end, as "propaganda"?

>>>>Giving up already? I was just starting to enjoy this.....
>>>
>>>
>>>Sorry to disappoint you but I found another job and have other

>>>what I mean if you really had a job and custody of your kid.
>>
>>You really are becoming Twisty. You are even starting to spout out the
>>same unfounded accusations.

>You have a 'tell', Dave.

Really? Wow, I'm impressed. There are talented people who can tell
when other people are lying by their body language, how they carry
themselves and how they present their "stories". But that requires
direct physical observation of the person. It's quite a bit more
difficult to apply the same techniques, considering the lack of
inflection and elocution, to a set of typed words alone.
Boy, you're just full of surprises.

> Not only are your lies easily identified, but
>you responses have a unique characteristic that tells the motivation
>for the lie; i.e, whether your lie was malicious, deceitful, etc....
>or even to protect a secret (usually to cover up another lie).

When have I lied (be specific)? Are you now accusing me of not having
a job and custody of my kid, and when I correct your unfounded (and
incorrect) accusation, you consider that a lie?

Or do you want to start asking me about the Phelps, my Villanova
account, and the CB'er who got busted by the Norristown Police for
disturbing the peace?

You are as off the wall as Twisty if that's what you think.

> And just so you know, I'm no expert in lie detection.

That much is plainly obvious.

>I've only known one
>other person who lied as poorly as you.

Perhaps the reason that you feel that I "lie" so poorly is that I'm
really telling the truth. Most pathological liars are quite adept at
spinning fabrications.

When considering the rationale of why people feel the need to lie, one
must consider the motivation. Why would I have a need to lie about
things that have no relevance to this newsgroup?

> She even tried to make a
>career out of it. Now she's alone and miserable, just like you will be
>soon if you don't learn something from this experience.

Your ex-wife?

I've learned a lot from this experience. I've learned that there are a
few people out here with serious self esteem issues, who then project

those shortcomings on to others, and then claim those others lie when they set them straight.

I've also learned that the more someone becomes frustrated when they are unable to defend themselves effectively on the issues, they often turn to vitriolic personal attacks, and making reckless and unsubstantiated claims about certain aspects of the other person's life.

You were never as crass and blunt as you've been since you've decided to "educate" me on the ills of your political ideology. You've let your emotions get the better of you, and that has reduced you to the level of Twistedhed.

>>>Regardless, our discussions have already forced you to show both of
>>>your faces on several topics, and to continue would just be beating a
>>>dead cliche. So feel free to preach your self-righteous attitudes and
>>>technical 'opinions' because nobody takes you seriously anymore.

>>
>>I am probably the most straight-up honest person on here.
>
>
>HAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!! I love early-morning humor!!!!

You find that funny? Then I suppose you have some evidence to disprove it?

>> I have
>>nothing to hide, and don't try to. Maybe that's what pisses you and
>>your newly found soul mate in Florida off. You can't back me into a
>>corner, because I've said or done nothing that I'm ashamed of.
>
>
>That's paranoid. Nobody is trying to back you into a corner, Dave. On
>the contrary, I'm trying to inject some logic and reason into your
>artificial reality.

Your logic and reason. Which is clouded by your own partisan bias. But you refuse to see it. Yet the really funny part is that you accuse me of doing exactly what you're doing. The thing is that I admit that I am a right leaning conservative, and I accept that my viewpoint is polarized to some degree according to my political slant. But you still try to portray yourself as objective, which is the really funny part.

> I'm making progress but it would help if you could
>open your mind and quit kicking and screaming whenever I state a fact
>that threatens your faith-based perceptions.

Your "facts" have already been demonstrated to be little more than extrapolated conclusions based loosely on factual information, but twisted to fit a particular political bias.

Partnership Opportunity
Hello,
I am with a manufacturer of fine jewelry and am currently looking for those interested in forming a partnership to sell jewelry on eBay or anywhere else. I work for Elie International, a manufacturer of fine jewelry located in the heart of the diamond district in New York City. We have been in the jewelry business for over 23 years and are registered with the Jewelers Board of Trade (JBT registration # 01222207) and Dunne & Bradstreet.
For the first time in our company's history we are looking to build partnerships with individual sellers. We hold an extensive stock of over 24,000 items and need vendors to keep it moving. By selling our merchandise on eBay, or to family and friends, we become your partner not your competitor and offer you fine jewelry at wholesale prices which are a FRACTION of what YOUR CUSTOMERS pay in retail stores. We understand that many buyers are apprehensive about paying for merchandise up front, and we have devised our Direct Purchase Partnership program with these concerns in mind. Our Guaranteed Movers Policy states that if you cannot sell one of our items within 6 months we will exchange it. This insures that you are never stuck with merchandise you can't sell. We want to strongly emphasize that this is a partnership and we offer our partners the full support that they need, including pictures, prices and descriptions of all merchandise to get them started. Please contact us via e-mail at elieint@aol.com or at (212) 719-0090 if you are interested or have any questions and please include where you saw this message. Thank You

ok
hate to sound like a dummy but didnt get a response from my other post.
does the ar-2000 mod by jumpers or by button sequence?
it was put out around 96 i think by clear channel and if there are any
other mods for it out there?
i have googled and couldnt find any answers except the was a guy asking the
same questions about it in 96 with no one answering him...lol helpme out on
this guys...lol
thx'

2499. Viking antennas by Childs Electronics ? Comparison ?

Newsgroup: rec.radio.cb
Date: 2005-02-11 19:18:32 UTC
From: Iowa883 <dswebber@netins.net>
Message-ID: <cuj0dg$6kt$1@news.netins.net>
Source record: 196191

Hey Guys,
I have had excellent results with the Viking antenna made by Childs. Not many people have heard of it. Anyhow , the shop that I used to get them from closed up as the ole' boy retired.
Is there any good trunk mount antennas that perform really well ? Or possibly a magnetic mount that performs well and will stay on the car at freeway speeds ?
I run a Ranger 2950 (the old good ones with the amber backlit) , I need something that will make this unit perform its best . Might even turn on the footwarmer every once in awhile. :-)

My closest truck stop deals in Wilson and Barjunk I mean Barjain.
How about a LIL Wil , are they good or junk ?

Thanks,
Iowa883

>an -infinite- number of possible causes for any given event.

Why is that? The existence of God is but one aspect of many. It's also
one thing to acknowledge the existence of God. It's totally another to
attempt to define him. To define something implies setting parameters,
and limits (Even if those limits are supposedly limitless), which is
beyond our ability to do.

> But you
>don't need to believe in God to understand the infinity rule. Both the

Which is why we apply practical limitations, and not take things so
literally.

Once again, I remind you, I do not believe is absolutes. Most events
are relative.

Why? There is no precedent setting evidence to indicate that any of
those acts have occurred in the past. So why consider them now? That's

what I mean by statistical probability.

>>>You have made two different arguments here. One is inductive and based

Change is also relative. Without something to compare to, you cannot
define the change.

>Therefore, there are an
>infinite number of absolutes.

No there aren't. There are very few absolutes. Change is also not
absolute as it can stop at some point. But change is relative to the
past.

>This is true -regardless- of what you
>believe. Dave, don't you see how your belief system is interfering

>determine what circuit or circuits are affected or responsible.

Gee Frank, you've described the exact process that I use. But knowing
the statistical failure probabilities relative to the symptoms allow
"us" (Troubleshooters who know how to think outside of the box) to
save a great deal of time by investigating known problem areas first.
Call it taking shortcuts if you want. But whatever you feel
comfortable calling it, the end result is that I can get the job done
in les time. And, as you should know, time is money.

>Then
>WE use further testing to narrow down and isolate the faulty component

>-=NOTHING=- to do with probability -- if it did then it would be
>called "troubleguessing", which is what -you- practice as evidenced by
>your own statements.

What you call "guessing" is what I call calling on experience to
identify.

When you work on very few things, obviously, you cannot be expected to
have built up a great degree of history in statistical probability.
But when you've worked on the sheer amount of similar radios that I
have, in the last 30 years, history has a way of repeating itself. I
merely avail myself of that. It hasn't failed me yet. To date, I have
never had a radio come in that I couldn't fix, including some that
other techs "gave up" on.

When I was back in technical school in the late 70's our shop had a
"race" to see who was the fastest troubleshooter. My opponent went
down a programmed list of steps to determine where the fault of the
radio (a basic 5 tube design) was located. I looked at the symptoms,
and basing what I saw with past experience, I skipped many of those
programmed steps. The end result was that I finished in half the time.

>>The power supply cap example was made to illustrate the types of
>>failure that caps can have.
>
>
>The subject was not about the types of capacitor failures; it was
>about your presumption that the fault was due to the failure of a
>capacitor.

In my experience, when you have a cap in shreds, the odds are good,
that the cap failed. When no other part is defective, or contributed
to the failure, excepting mythical acts of "god", the obvious
conclusion is that the part failed. When the part is replaced and the
equipment is returned to service, with no further problem, the case is
closed.

>Dave, for the SEVENTH TIME, I -never- said they didn't! Do you have a

>caps that did not match the labeled uF but -were- within the specified
>tolerance.

Ever since I got my capacitance tester, I was surprised at the number
of caps that test "out of tolerance", yet still seem to work to some
degree. That leads me to conclude that there are probably many more
caps in working equipment that are out of tolerance, but because the
circuit isn't critical, you never know it.

>> Ceramic "disk" caps are pretty
>>good at holding value.
>
>
>They usually have a much tighter tolerance than electrolytics.

Yes, I agree.

>> I have seen some mylar caps change though.
>
>
>Never seen mylar caps deviate from their tolerance (unless they were
>fused). I -have- seen many paper caps that way out of tolerance.

I had a switching power supply in a Yaesu FT-726R which was crowbaring
due to excessive voltage. Even when fully loaded, the supply voltage
would rise to about 17V (With the crowbar disabled). The voltage
adjustment was set to minimum. The solution turned out to be two mylar
caps in the switching oscillator circuit which had shifted tolerance,
which allowed the switching pulse width frequency to increase beyond
the range that the feedback circuit could control. Replacing those
caps, allowed the voltage to return to the proper level.

That was one more recent example. There have been others.

Paper caps are probably the worst. I had one in an old Lafayette tube
rig short out and that took out a resistor in series with it.

>> But
>>small electrolytics are known for value changes. The thing is that you

I tend to agree with you that circuits should not be designed to work
only with optimal values. But in today's market of quick and cheap
electronics, that's not usually the case.

>>I have had low audio gain problem is CB radios where the problem

>peaks would then exceed the voltage rating of the capacitor. The
>result is that holes are repeatedly poked in the dielectric. Over time
>the dielectric erodes and the capacitance decreases (unless the cap
>shorts through the holes first).

How can that happen in a low level audio circuit where the maximum
voltage swing is +/- 1V and the cap is rated at 10V, and no other
components had failed?

In your example, that is a blatant case of poor design. If the circuit
is routinely expected to see the conditions you've described then the
cap voltage rating was insufficient.

>
>Regardless, the root cause is usually either a flaw in circuit design,
>the failure of another component, or improper alignment.

In your example, it's clearly poor design, assuming those are "normal"
operating conditions.

>
>
>Because you can't comprehend the concept as it relates to the topic,
>which is the AC resistance of a capacitor.

Of course capacitors have A.C. resistance. That's what allows them to
act as coupling caps in audio circuits. But that characteristic is not
of primary importance in a power supply filter, as the amount of
ripple neither exceeds the voltage rating of the cap, nor does it
reverse the polarity of it, assuming good engineering practice.

>>I know the basics. 120 hz is the fundamental frequency of a full wave

>"fundamental" frequency. If you have a spectrum analyzer you can prove
>this to yourself. Begin with a sine of any frequency, put it through a
>full-wave rectifier, then look at the spurs.

Been there, done that. 120 hz is the largest component. There are 60
Hz harmonics spacing out from there. There is also a 60 hz component,
but it is at a much smaller amplitude than the 120 hz signal.

> You will no doubt see a
>large spike at the 2nd harmonic of the source, but because the
>rectifiers in the bridge can never be perfectly matched you will also
>see a spur at the FUNDAMENTAL! If the 120Hz after rectification -was-
>a fundamental then it would NOT have harmonics -below- it!

You can't have a negative harmonic. Yes there will be some leak
through of the primary 60 hz frequency. But the fact that the 120 Hz
frequency is the strongest, means that it is now the fundamental,

>>>Twice asserted. Again, as you say, "apology accepted".

>capacitor or a battery?

I said "like a small temporary battery" Place a battery across an
unfiltered power supply and it will also act like (Oh my god!) a
battery and filter as well. Is the battery also "shunting A.C. to
ground"?

>>>You're stalling with semanitcs, but even -then- you are wrong. Say

>Resonance in a power supply? That's scary, Dave.

Anything you can use a battery for can also use a power supply. All of
the experiments on filters, resistors, inductors, caps, transformers,
can be done with a simple power supply and a few other circuits. I
never said the power supply was THE ONLY thing we built or studied,
only that is was an excellent method of teaching the basics, while at
the same time utilizing the theory in a practical application which
could be measured to verify the calculations given by the theory.

>
>So you built a color organ in a high-school industrial arts class.
>Whoop-dee-doo, so have lots of other people.

No, this was not high school industrial arts class. This was a three year electronics program. I built far more than a "color organ". I built AM and shortwave radios, and my first 2 tube grounded grid "CB" amplifier. There was only so many parts I could scrounge though.

>else that conducted electricity.

I chose to further my education and started working full time as a quality technician and then later a production troubleshooter

>After the USMC I worked in two different commercial radio shops until
>I went back to college (I got some credits from UNC while in Lejeune).

I was always enticed by commercial radio. My tech school had a radio station (WVVE - We're the Voice of Vocational Education) at 91.3 Mhz. I was very close to transferring there. But they closed it down during my junior year, and can celled the license. Had I gone down that path,

who knows what I might be doing today. Funny thing about choices.

>Graduated from EWU with a BS in Electronic Engineering (a specialized
>Electrical Engineering degree) with a minor in Communications.

>for other companies/radio stations. IOW, just about anything old or
>new that pays money.

I never owned my own business, but I did subcontracting for several
other radio shops, and a TV shop. But the workload became too great in
addition to my regular job, so I scaled back a bit.

>Worked as an engineer at JM (now Honeywell) for a year, designing a
>machine that processes the lids for uP chips made by Intel and other
>manufacturers (probably even one that's in your own computer).
>
>Worked as a quality control engineer at HP for a couple years.

I've worked at a few different places as both technicians and later as
an engineer. I've done everything from product design to support to
test to quality. I've worked with RF, analog and digital video,
digital audio, software and many other things I've forgotten about.
Sorry if I don't reveal where I'm working now, but frankly (no pun
intended) it's no one's business.

>
>Worked as a BE at a local radio station until last fall.
>
>All the while I have been in the hobby of CB radio, including being a

>>> And because it is not a constant
>>>the RC curve does -not- follow the same path that it would if the
>>>capacitance -was- a constant. And BTW, the RC curve becomes a straight
>>>line when the current is constant because the charge rate of the cap
>>>is a fuction of current, not voltage. This is yet another example of
>>>your inability to distinguish current and voltage.
>>
>>Are you trying to say that an R/C time constant is a straight line? I
>>sure hope not.
>
>
>Put on your reading glasses again, Dave. I said the curve was straight

How can a curve be straight Frank? You're talking in riddles. I sure
hope you never take up teaching. You have a tough time explaining what
you're trying to say.

>>Perhaps it is not me that needs a refresher course in electronic
>>theory. It would seem that real life experience has paralleled my
>>understanding of the hows and whys and has contradicted what you have
>>said. In other words, I have seen nothing in my 35+ years of playing

>>with and repairing radios that goes along with your observations. But
>>I have seen many that have agreed with mine. Now, unless you want to
>>make the case that the laws of physics works differently on the left
>>coast, I would tend to question your depth of "knowledge".
>
>
>Everything I have said can be easily verified by anyone who can read.
>You can't read, which explains your pathetic understanding of basic
>electronics.

I can read just fine. But you seem to have trouble 'splainin your
self.

You are full of straight curves, and sing of A.C. components on D.C.
voltages which are present, but equal zero.

In other words, a lot of doubletalk.

>
>
>>> Maybe you think you can leaf
>>>through a few textbooks, speed-read a few concepts, paraphrase them
>>>and try to pass them off as if they were integrated into your
>>>education.
>>
>>That's what it seems you have been doing. Only you forgot to read the
>>part about caps drying out.
>
>
>Where's that book, Dave?

If I tell you, will you read it, or while you toss it aside as "right
wing propaganda"?

>
>
>>> Well, you can't. I've been in the field long enough to
>>>recognize that scam and it doesn't work. It didn't work for Skippy, it
>>>didn't work for Toll, it didn't work for Eitner and it won't work for
>>>you. But please don't stop trying because I find it very entertaining.
>>
>>Maybe you are the one who doesn't know what you are talking about
>>Frank. You've gotten into "discussions" with other people before and
>>tried to play that game. In some of those cases the stuff you brought
>>up was a bit off-the-wall, and contrary to accepted practices. The
>>whole "coax length" debates come to mind.
>
>
>You mean when CLP falsely claimed he had a copy of the book I used for
>a reference? Sure, why not. You have already pushed this discussion
>well beyond the boundries of the original topic, so why don't we
>revisit the coax length debate? But just know that it's not going to

>detract from the fact that your electronics education is woefully
>lacking, your claimed experience is probably 'overinflated', and your
>troubleshooting skills have no logical or scientific methodology. So
>yeah, let's do the coax thing again. Just what was it I said that you
>consider to be "a bit off-the-wall"?

I don't remember exactly, and I don't care enough to revisit it. But
suffice to say that you were the first person to offer up some very
"unique" explanations for some givens that many hams take for granted.

>>>>That's why I chose it. Redundant would fit too.
>>>
>>>
>>>I'll give you another opportunity to look up those words.
>>
>>Why? I am fully aware of the definitions of both.
>
>
>I don't think so, Dave.
>
Sigh..... Ok you asked for it.....

suï¿½perï¿½fluï¿½ous (P) Pronunciation Key (s-pï¿½rfl-s)
adj.
Being beyond what is required or sufficient.

reï¿½dunï¿½dant (P) Pronunciation Key (r-dndnt)
adj.
Exceeding what is necessary or natural; superfluous.
Needlessly wordy or repetitive in expression: a student paper filled
with redundant phrases.
Of or relating to linguistic redundancy.
Chiefly British. Dismissed or laid off from work, as for being no
longer needed.
Electronics. Of or involving redundancy in electronic equipment.
Of or involving redundancy in the transmission of messages.

Gee Frank, redundant is synonymous with superfluous.

Are you now going to pull another Twisty and attack the accuracy or
completeness of my dictionary?

>>>Another flip-flop. Make up your mind -- is it easy or not?
>>
>>Depends on the equipment and the application.
>
>
>That's a cop out.
>
>
>>Not easy does not mean impossible, or even improbable. It is easy to
>>eliminate the majority of common practical causes. In most cases, the

>>cause will be found during this process. In those rare cases where the
>>cause is not part of the statistically probable causes, a little more
>>investigative time may be involved. Troubleshooting is all about
>>knowing the statistics. If you get in a piece of equipment that shows
>>a common failure that you've seen before, would it make sense to check
>>unrelated parts, or would it make more sense to go where the previous
>>faults have been found?
>
>
>You said, "it's easy to eliminate practically every potential cause".
>When I said that it's not always easy you replied with, "No, but it is
>doable." Now you say it "depends" and obfuscate your flip-flop by
>getting all wordy and begging for vindication with a loaded question.

The object is to not eliminate *all* possibilities, but to eliminate
the most probable ones. You may disagree, but if there was some way to
demonstrate, I'd bet you $100 that I can find and correct a typical CB
flaw before you're done studying the schematic.

>Despite your wishy-washy position, I'll answer your question by saying
>this: Troubleshooting by playing the odds (statistics) is for people
>who do not understand the purpose and function of the circuit and all
>it's components, because if you -do- know how they work then there is
>no need to make guesses.

That right there proves that you have not the faintest clue about what
I'm talking about. It's not "guessing", it's looking for the most
likely place to start looking. The process to be able to make these
intelligent "guesses", is based on years on analytical analysis and
repetition.

> As a perfect example, read the early posts in
>this thread again. You will note that both Lance and myself asked to
>see a schematic. OTOH, you blurted out that the cause of the problem
>is "almost always" a capacitor. That's not troubleshooting. That's
>troubleguessing.

Frank, as has been becoming an increasing staple for you, you totally
misunderstood and misread the concept.

I offered a sample of my experience which covered similar problems in
other radios as a place to start looking. Having the schematic adds
almost nothing, without the ability to see the radios and make
measurements. Your suggestions were also little more than guesses as
you knew nothing more about the radio than I did. The difference is
that you looked at the schematic and offered a potential problem based
on generic theory and what you thought to be true based on your
experience. I offered the same based on specific situations which had
similar symptoms

Now we never heard back fro the original poster as to whether he found
the problem or not. So for you to condemn my suggestion as wrong

before even knowing what was right, smacks of pompous arrogance.

>>Never seen it happen. A breakdown of transformer insulation will
>>usually result in a short and a blown fuse.
>
>
>A shorted winding usually results in an overheated transformer because
>most people defeat the purpose of the fuse and replace blown fuses
>with bigger ones so the equipment will keep working.

That's their problem.

> But the isolation
>I was referring to was between the primary and secondary windings.
>Many cheap power transformers have poor isolation between the
>windings, and some have none at all. Primary shorts to the secondary
>and you get lots of unwanted EMF on the secondary. You -have- worked
>on Pyramid supplies, haven't you?

Yep, and I've never seen what you've described. The one I currently
have once belonged to a local CB'er who tried to jump start his car
with it, and he ended up taking out all the series pass regulators as
well as the LM723.

>>>Actually, it was a design flaw. The diode was supposed to be thermally
>>>connected to the heatsink, but was mounted such that the thermal link
>>>was nothing more than a blob of heatsink grease. The grease dried out
>>>and the redidue became a very good insulator. Regardless, my point was
>>>that the failure is not always intrinsic to the circuit or device;
>>>many times the problem is caused by outside influences, such as
>>>improper operation or maintenance, poor design, manufacturing flaws,
>>>etc. And many of those faults are not always evident; i.e, they don't
>>>leave evidence of the cause of the failure. The fact is that there was
>>>no evidence of the cause of the failure in the Peavey. I learned of
>>>the cause after harassing Peavey tech support until they forked over
>>>the info (I really think they try to keep faults like that a secret
>>>because they make so much money on spare parts, but I suppose that's
>>>just one aspect of modern business practices).
>>
>>So you finally found the source of the problem. You simply found
>>another possibility to consider. It was nothing magical.
>
>
>I never said it was.
>
>
>> The next time
>>you see an amp like that with the same problem, will you not then
>>check that diode first? That's what I mean about experience and
>>statistical probability.
>
>

>I check the diode, but not first, and I don't assume that the diode is
>the problem.

But I'll bet (unless you really out there) that before you power up
that amp after replacing the chain of audio transistors, that you'll
check that diode just to be safe.

>Quite the contrary; the problem is usually a power
>transistor that shorts.

Are you willing to bet a set of transistors that that's the only
problem?

> And for the sake of anyone reading this for
>info on the amp, I highly suggest replacing the MJ15024 and MJ15025
>with those Korean-made transistors. When they go bad they blow open;
>almost every other brand (including Motorola and Peavey in-house
>stock) will short and blow the rest of the amp.

A good tip. But do those Korean transistors match up equally in noise,
gain and power?

>>You might have half a leg up on me in pure theory, but you are
>>seriously lacking the proper mindset to be an effective
>>troubleshooter, as you don't seem to grasp the analytical mindset
>>that's required or the practical application of your theory.
>
>
>I don't use statistics, I use logic.

I use both.

> It's much easier, more effective,
>and in over 30 years of my career of repairing an extremely wide
>variety of electronic equipment, -NOTHING- I have -EVER- fixed has
>come back to the shop because I didn't fix the problem correctly.

Neither has any of my stuff. Well, except for the case of the serious
keyclown types who stress their stuff and kill it again. But they've
never failed due to a repair that I've done. In fact, in the case of a
modification that I made to replace the MRF 477 final transistor in a
President Jackson, with an MRF 450 stud mount, the radio stopped
blowing finals when this guy ran his amp, and 6 years later the radio
is still being abused, but it still works.

>
>
>>>>>So there are -many- possibilities that may or may -not- be obvious.
>>>>
>>>>I respectfully disagree. There ARE other possibilities yes, but I
>>>>disagree that there are "many". A simple process of elimination will
>>>>whittle that number down to a few highly probable possibilities.
>>

>>>A shorted resistor is not "highly probable", nor is a half-shorted
>>>double diode, a PCB trace with a hairline crack, an incorrect slug in
>>>an RF or IF transformer, etc. I can make a list here, too.
>>
>>Have you ever seen a bell curve? Have you ever studied the Taguchi
>>methods of quality?
>>
>>Much of this assumes a certain degree of predictable and probable
>>failure areas.
>>
>>Is a shorted resistor the first thing you consider? The PC trace
>>crack?
>>
>>The double diode should have been on the list though. As one of the
>>components that set the bias, it would be highly suspicious in a
>>cascade meltdown of several amp stages. At least it would be to me.
>
>
>You don't have a clue, Dave. When you fix your first 1.3K then maybe
>we can talk. Until then, don't even -TRY- to guess.

Piece of cake. Audio amps are the next after power supplies in
simplicity.

>>The incorrect slug is a interesting one. If the radio once worked,
>>there is no way that this could happen. If you were told that someone
>>else tried to fix it, then I would be looking for things like that. I
>>have seen similar problems with "Screwdriver Tech" mods. Undoing
>>improper repairs is another statistic to consider.
>
>
>I don't need to be told if someone fucked with the radio or not. The
>paint could be cracked, the wax disturbed, and sometimes there's even
>ferrite dust in the hole or slot from some idiot using the wrong tool
>for the job.

True. It is rather obvious. And that is what usually "tells" you.

> Even if they got the core out and replaced it with one
>they found in their transistor radio, it's easy to tell that the wrong
>core was installed when an adjustment won't give the expected results
>(all else being the same).

Usually the "Q" of the circuit has changed, and low gain or narrow
bandwidth is the typical result.

>Most screwdriver techs (like yourself)

Looking in the mirror again?

>don't realize that those cores, aside from having different sizes, are
>made of various materials with different permeabilities and frequency
>characteristics.

No? Say it isn't so. I knew something told me to keep that core sample kit that I rescued from the trash here when they closed down a old project.

> One core may look exactly the same as another but
>many times they aren't and are not interchangeable. And I would guess
>that this ignorance accounts for at least a quarter of the radios in
>my scrapheap.

Well I'm glad you told me that Frank.

>But once again, just because some bonehead played with the screws
>doesn't make me jump to the conclusion that a slug is the problem,
>statistics or not.

No, not at first. But unless you are a bonehead, you start to suspect it when it doesn't align properly and there are no other obvious causes.

>>>You -still- haven't looked up the word. Shame.....
>>
>>I don't have to. I know what it means. I was comparing methodologies
>>between one science and another. You, on the other hand, failing to
>>see the big picture, are attempting to make hay by arguing semantics.
>>You are starting to adopt the tactics of a certain fruitcake who also
>>resides here.
>
>
>I was just suggesting you clear up your ignorance by learning a
>definition which, until now, you have only assumed was correct.
>
>
>>>What you initially described is called 'failure analysis' (or 'crime
>>>scene analysis', as per your example). The term "forensic science" is,
>>>literally, the -presentation- of a scientific analysis.
>>
>>For legal purposes.
>
>
>Sometimes. Forensics is about presentation. For a brief time I was a
>member of the Forensics club in college. The various subjects included
>debate -as well as- many other aspects of speech. The word "forensics"
>is probably one of the most commonly misdefined words in the English
>language, probably because people watch too much TV (and yes, I used
>to watch Quincy).

Sigh (again)

foï¿½renï¿½sics (P) Pronunciation Key (f-rnsks, -zks)
n. (used with a sing. verb)
The art or study of formal debate; argumentation.
The use of science and technology to investigate and establish facts in criminal or civil courts of law.

Happy now?

>> But the methodologies employed by criminalists is
>>similar.
>
>
>The methodologies employed by criminoloists is nothing more than the
>scientific process.

Right! Exactly what I use when solving a problem. Whether it be a
faulty CB radio, a problem with my car, a clogged drain, a broken
child's toy etc.

> A forensic criminalist is a criminalist whose job
>includes the presentation of the evidence. Even -you- could consider
>yourself a forensic criminologist -- you have presented evidence that
>you are a criminal.

As have you. Fortunately, the statute of limitations for illegal radio
activity has long past.

>>>>>>I have a battery charger which is unfiltered (the battery acts as the
>>>>>>filter cap), which may serve the purpose nicely.
>>>>>
>>>>>
>>>>>Go for it! Don't forget to use several different caps, measuring both
>>>>>AC and DC volts across the cap, as well as the time it takes until

>>>>
>>>>When I get a chance, I'll set it up. I need to find some high current
>>>>resistors that can stand dissipating 20 amps or so.
>>>
>>>
>>>What do you need resistors for? Just hook the puppies up! But if you
>>>want a resistor anyway try an electric space heater or stove element.
>>
>>Without a sufficient load resistor, how can I validate your assertion
>>that increased ripple (due to load) is the cause of cap failure?
>>Without the load, if I place a cap across the output of the battery
>>charger, all I've done is create a filtered DC power supply. The cap
>>should last for years under those conditions, as would be expected.
>
>
>Then try it both ways.

How long do you want me to run it before you conclude that you were
wrong?

>>I have yet to see an electric space heater than runs on 12 V. The
>>current required would make it impractical. My space heater draws 12
>>amps at 120V. At 12 volts, it would have to draw 120 amps for the same
>>wattage.
>

>
>This is another excellent opportunity to further your education. You
>claim that the heater draws 12 amps at 120VAC. Ok then, measure it's
>resistance cold. If it's 10 ohms then putting it across 12 volts will
>only draw 1.2 amps from your battery charger. But if it's less than 10
>ohms then you just learned a lesson about lightbulb filaments.

You forgot to consider the effect of the A.C. fan motor..

>>>I don't buy that simply because an auto bulb encounters much more
>>>shock and vibration than most household lightbulbs.
>>
>>Which is the point I was making. A household light bulb would never
>>last under the conditions found in an automobile. The filament in an
>>automotive bulb is thicker.
>
>
>Then why not just make the filament thicker in a household light bulb?
>The resistance would be lower but that can be compensated for by
>increasing the length, right?

Cost. Plain and simple. Planned obsolescence secondarily. If they
designed a lightbulb which last forever (or a really long time) the
demand for lightbulbs would fall off.

>>>>I entered the term "capacitors drying out" into google and came up
>>>>with 63 links to the term used in a similar context to what I've
>>>>promoted here. I didn't have the time to read them all, but be my
>>>>guest if you are so inclined.
>>>>
>>>>I accept your apology.
>>>
>>>
>>>63 hits? That's all? I'm sure there are -plenty- more references from
>>>people who, like yourself, mistakenly attribute the term "drying out"
>>>to capacitors. Heck, I got over a million hits for "Santa Claus" but
>>>that doesn't mean he exists.

>>Santa Claus does exist. Ask my daughter.
>>
>>> How about an -authoritative- reference,
>>>Dave? You know the difference, don't you?
>>
>>You asked me to provide examples of people (other than me) who used
>>the term. I did that. Now, that's not good enough for you? The term is
>>common, even if you refuse to acknowledge it. The fact that you refuse
>>to accept it unless it's used in form of "reference" book is
>>illustrative of nothing more than a stubborn adherence to your
>>ignorance on the subject.
>
>

>I asked for engineers or other authoritative references. You provided
>excuses and Google-juice.

So, unless the people who use the term are somehow recognized by you
as someone worthy of your respect, you discard it as invalid. Just
like you discard political stuff you don't want to read as "right wing
propaganda".

>>
>>>And 0.5mV is plenty for 50% mod, especially when the radio's mic
>>>sensitivity is specified for 1.0mV minimum at 50% mod.
>>
>>Then .5 mV would make about 25% modulation. Not enough to set any
>>alignment points.

>Ever consider the possibility that the alignment procedure calls for
>measuring the mic input with an AF VTVM using a demod probe? IOW, the
>measured reading during the alignment is half the actual Vp-p at the
>input; which, when corrected, just happens to be the spec for the
>radio.

Then why not specify it as such? Stop trying to pull rabbits out of
your hat Frank.

>The two specs are fully consistent with each other. Also, the
>transmitter RF alignment is done with 500mV of two-tone audio at the
>mic input.

My spec calls for no more than 200 mV at any point.

>>> I offered to
>>>scan the page..... are you sure you don't want to see it?
>>
>>I believe you know how to read. But what you are reading is wrong.
>
>
>I don't think so, Dave. The specs are consistent, the alignment works,
>my audio doesn't sound "mushy and compressed" as you describe your's
>after doing the alignment from the Sams manual (I'm assuming that's
>what you are using even though you have yet to admit or deny it), the
>manual and specs were provided to RS by the manufacturer, and every
>argument you have used to discredit the source has backfired in your
>face. So I really think this manual is accurate, Dave.

Try not to think Frank, that's when you get into the most trouble.

>>> After all,
>>>Uniden made these radios for radio shaft, so it was -Uniden- that
>>>provided the information in the service manual.
>>
>>Are you sure about that? Are you also confident that the decimal point
>>was not a typo?
>

>
>Yes and yes. If the decimal point was a typo then they would have had
>to make the same typo in three places, all regarding the same spec,
>and all in a way that the altered specs are not only consistent with
>each other, but that they work. Anything is possible, but I would
>accept the single-bullet theory before I would accept your suggestion
>that the spec is a typo.

Then conversely, for my manual to be wrong, then all of my other
manuals would be wrong as well. What was that again about that single
bullet?

>
>
>>>Not like Sams which
>>>got their info from reverse engineering.
>>
>>And you know this how?
>
>
>Because that's how they made their manuals. You've been using them for
>35 years and you didn't know that? TAB books did the same thing for a
>while.

I use both SAMS and factory manuals. SAMS claimed to used factory
specifications for their alignment.

>>Well, the issue becomes, one of our manuals is wrong.
>>
>>And once again Frank, the fact is that I can find NO other reference
>>in any of my other numerous manuals (Some are factory) for dozens of
>>radios which calls for such a low level of mike input. So now that
>>leaves 2 possibilities. Either:
>>
>>A. You are wrong.
>>B. Every one of my test procedures are wrong.
>>
>>Now what is the statistical probability of either of those choices?
>
>
>You left out a few other choices:
>
>C. At least one of your alignment procedures is wrong. - Not possible as they are all
consitant with each other.
>D. You are making this a personal issue instead of a technical issue. - Not at all.
>E. You don't know as much as you think you do. - Actually, I probably know more.
>F. I am not a liberal. - Yea, and the Pope's Jewish
>G. Bush is a criminal. - Then so are you, based on your shakey criteria.
>>>CB is not intended for high-fidelity. Passing the higher freqs widens
>>>the bandwidth of the channel and makes it more likely to bleed into an
>>>adjacent channel. That's one reason why CB mods are illegal.

>>
>>No kidding. But the audio BPF also cuts back on the very low
>>frequencies as well. All I know is that the radio is more pleasing to
>>the ear when the BPF is removed. From a purely legal standpoint, you
>>are correct.
>
>
>If your high-fidelity operation is creating a bandwidth that exceeds
>the allowed bandwidth for CB channels then you are a criminal.

Did that bother you when you were "keyclowing" in the early 80's?

>>300-3000 hz is commonly referred to as "communications quality" audio.
>>This is why most AM rigs have 6 Khz filters in them and SSB rigs have
>>3 Khz filters. But people like to run D-104's on their rigs, and the
>>BPF mod makes the radio sound better on those mikes.
>>
>>You and I can debate on which method makes more sense, and from a
>>puritanical standpoint I would probably agree with you. But you have
>>to remember, that when you are in business working on radios for other
>>people, they don't want to hear that their mikes are junk, or that
>>they should do this or that. They want the cheap and easy fix.
>
>
>Maybe that's what -your- customers want.

Yes, that's what they want.

>> That's
>>what removing the BPF gives them. It makes the rig sound as good as
>>their last one on the same mike.
>
>
>How about just aligning it according to factory specs?

Aligning it properly has no effect on the overall fidelity. There is
nothing to align in the audio stage with the exception of the mike
gain (Which is a front panel user control on the Cobra 139XLR version)
and the AMC.

>>
>>Probability would suggest that yes, you did.
>
>
>It's far more probable that you can't admit you have been wrong all
>these years.

I haven't been.

>>
>>There's "works" and then there's "works better".
>
>

>There's also "legal" and "criminal". Corrupting a sweet radio because
>you are too arrogant to accept your own mistake is criminal.

Now you are being a hypocrite.

>
>About a dozen or so RS models that use the same mic, as well as
>several GE radios, a couple SBE's, Tram D-60, etc.
>

When you make a blatently incorrect statement, I'm not about to let it
pass.

>>>The question is, given how your
>>>own description of the audio is indicative of misalignment, and that I
>>>have a more authoritative reference that disputes yours, why do -you-
>>>assume that -your- book is correct?
>>
>>Because it agrees with several dozen other books.
>
>
>You should probably read those books a little more carefully.

I have.

> While
>you might expect the RS manuals have similar specs, I have many other
>manuals on hand and most of them (radios that use dynamic mics)

Which is the great majority of modern solid state rigs.

>only
>have specs for 80 to 100% modulation, which is typically set at 8 to
>20mV (this is from the sample group I noted earlier). Since the mic
>range is quite wide and these specs are for radios that have some sort
>of compression and/or limiting, that lands the mic sensitivity spec of
>the TRC-449 pretty much on par with most other radios. The only real
>difference is that the RS service manual has an alignment to set the
>AM mod at 50%, a procedure that is somewhat out of the ordinary.

My Midland 13-885 has a similar two step process, as does any radio
with an internal mike gain pot.

>Regardless, the issue is the TRC-449. I have the original service
>manual and you don't. I understand why you are upset because it
>clearly shows that you have been using incorrect specs all these
>years, and unnecessarily modified an unknown number of radios because
>of it. You -could- blame Sams for supplying the wrong information. But
>you won't because you know as well as I do that the responsibility is
>ultimately yours -- you noticed a problem and failed to make a correct
>diagnosis. Instead you jumped to the conclusion that the LPF was the
>cause because bypassing it cured the malady. That's a 'symptomatic
>remedy' and is no better than declaring a fire is out because you
>pinch your nose and can no longer smell any smoke. Bad tech skills,
>Dave.

You're as thick as Twisty. I told you why I removed the BPF.
Regardless the difference between .5 and 5 mV would not make the radio
sound mushy, considering that the AMC is set with 200mV.

You're reaching and getting more sloppy at it.

>>A personal preference. I am an audio purist, like I said before.
>
>
>Then you should probably find another hobby besides CB radio.

I have several including ham radio.

Popular psychology fostered the idea of self-love. Then along came the assertiveness movement. Originally aimed at instructing people to assert themselves in the workplace in order to get their proper due, it leaped into all aspects of life. Swaggering, evidenced by the stroking of one's ego, reinvented itself as strategy and therapy. It turned out the world was full of people who, by their own admission, had movie-star looks, sensitive souls, healthy incomes, fun-loving natures and no prospects.

When he said, "Oh, because someone else breaks a "law" you are entiltled to break any "Law" you see fit. Sounds pretty much like he has broken it to me. And I would pretty much bet that he has sped at least once in his life, and gone over the limit. That pretty much makes him an "outlaw".

>who might not be so "kind".......

My brother in law is a cop. It's at the descretion of the cop. Since most often this is a revenue generating system. The judge and cop are on the same municipal team. If they want to beat you at 1 mph, they will. The reason they give 10mph extra, is because everyone goes over the speed limit. They would be up to their ears in court. So they take the abusers. But I highly doubt it's the inaccuracies of the equipment or speedometers, because like you said, some states have zero tolerance. So don't think you can claim the equipment is inaccurate in one state, and perfect in another. I really think it's just the descretion of the cop.

Can you stuff him inside the AR3500?

Cause it would be fun.

Just drive the speed limit, or else, you might upset someone ;-)

> That is nothing more than the descretion of the cop that tickets you.

Go read ORS chapter 810 sometime. It's up on leg.state.or.us. It does work that way in Oregon. And as said before, save for a few miles of interstate or a few well-travelled blocks of narrow secondary streets, Oregon has never had speed limits. Posted speeds, yes, in which you're allowed to drive faster if conditions warrant (on a clear, sunny day with dry pavement and light traffic with a posted speed of 70, a cop pulling you over for doing 85 will have a hard time getting a conviction in court unless it was a LIMIT 70 and not a SPEED 70 sign and the cops know this).

Oregon and Washington both give 10% margins for differences in speedometer calibration because very rarely are speedometers spot on. You could easily be doing 59 with your speedometer reading 55. The speedometer in my 1995.5 Kia Sportage reads 62 when it's doing 60, my roommate's 2000 Ford Ranger reads 57 at 60 MPH. If you got a ticket for doing 1 MPH over the speed limit, and you didn't fight it in court, you're a moron, here's your sign.

Well, you're supposed to get your instruments recalibrated after changing tire size. But differences as much as 5 MPH can happen depending on tire pressure and road conditions...I've yet to see a speedometer read the right speed driving on Oregon's notoriously rutted freeways in the rain (probably because you're forced to hydroplane along the lane, which is why the locals *will* get aggressive towards tailgaters, though the Californians usually don't get it until they slam into a wall or the car ahead of them approaching slower traffic hiding in the road spray of the vehicle ahead because they're following too close).

> People have fought a speeding ticket on this basis and have won.

> for speedometer inaccuracies when you're 10 MPH or more over.

I used to have to deal with police a lot when I was a security officer, and at one site, the worksite's driveway was a common spot for police to set up speed traps. The cops don't even bother radar cars until they see someone moving considerably faster than surrounding traffic, radar the overspeed vehicle for evidence, and just use the posted speed as something to estimate a fine from.

They seem to radar everyone in areas where there are actual speed limits when I see a speed trap in a limit zone. Though I never see anybody pulled over, everybody just slows down for the speed limit and then drops the hammer down when it goes back to a posted speed a few miles down the road.

I drive 100 km/h on the freeway even if the posted speed is considerably lower if the conditions allow, and the cops working the speed trips don't even look twice and keep looking for someone *really* speeding. Only time I drive slower than 100 km/h on the freeway is in Salem where there *is* a speed limit of 60 MPH (about 90 or so km/h), and on I-5, I-405 and US-30 in downtown Portland, which has a posted speed of 50 but is usually insane to try for more than 40, and the worst traffic accident in Oregon history was caused by some shithead Californian who drove his bigrig at 60 MPH into 14 cars stopped in a traffic jam on I-405 while talking on a cellphone and trying to pick up a CD off the floorpan. That Californian won't be going back to California anytime soon, he's a prisoner in Salem now for his criminally stupid behavior.

I must say I have never seen a man infatuated with another man so much
as you are with N8WWM. You stand around outside his house, you run
after him to hamfests, you hump his leg on usenet. I understand, you're
just a gay man following his dream, but please, what does this have to
do with CB?

Each license class is considered a different level and it is required
that you pass the previous level before you can use the privileges
of the next. But, as you asked, you can take any of the tests separately,
on different days or weeks apart. However, if you take and pass the
general test, and can not provide proof that you took the tech test
and the code test, you will not be granted the privileges of that level.

When you go to the testing station, you can take as many test as you
want for a single fee. For me it was $6.45. If you split it up, you
will be paying that same fee for each test. None of the tests are that
big of a deal. A month or two of studying the Qs and As and you should be
able to pass them all in one sitting. Go for the gold and go for the
extra test too. The big stumbling block was the 13 and 20 WPM
code tests, but they are all gone now.

For more information try "http://www.arrl.org/FandES/ead/classes.html".
All of the possible Qs and As are available there, as well.

I just want to get to the general level for now. I want to learn the code, is it
5 wpm only know? I thought you needed 13 wpm for general? I have no desire to
use code, but will do so for the test. The only thing is that by the time I can
save up enough for a $1,500 HF all band tranceiver, code will be gone anyway. I
hope to have one by the next skip cycle in a few years.

For the straight word on ham licensing and requirements -- see URL;
http://www.arrl.org/FandES/ead/classes.html
General and Extra currently require a 5 wpm code test.

Once licensed to General or Extra, a used $350 HF transceiver will get you
on the air (100+ Watts) and if you make your own antenna -- add $3 or $4.

If and when the code requirement is deleted, the use of Morse code will
continue - as it is just another mode of operation, many will continue to
use it and newbies will find the advantages of it, so MORSE WILL live on.

The lower bands -- 160M, 80M, and 40M are not dependent on the "skip cycle".
30m will do well also in the off years but it is a CW and data mode only.

I am not saying they should get rid of it. I am just saying I won't use it.
Sounds like they will get rid of the test in 2006 or so. I don't want to wait.
So I will study.

Paul,

I don't know about Oregon, but I know NJ. I have never heard of such a thing. And I have been to traffic court on at least 3 occasions. On one occasion, some motorist used the calibration defense. They about laughed him out of the court, and said they would bring in the cop with the certs. He ended up pleaing to a lower moving violation qwith no points. Believe it or not, they actually plea bargain here for traffic court. They want the dollar amount fine, and ill lower the violation so it doesn't kill you for insurance.

As far as my personal experience, I was given a ticket around 1991 for 59 in a 55. I pleaded guilty to a reduce "driving too slow", which carried the same fine, but no points. The other carried 2 points. So you manual is of no use to me or motorists in NJ.

And the only reason I fought 3 tickets, was because I was told you can get the points knocked down in court. The officers will actually tell you that. But if you just pay it, you get the points.

I did go to trial one of those 3 times (bargained the other 2), and beat a ticket for rolling stop. A cop was at a stop trap where many motorists were

rolling thru it. He gave about 150 tickets over a course of a weekend. I fought mine, because he missed my stop. He had 2 motorists pulled over and was on foot getting their documents, and he looked at the corner, I had already stopped and was moving, and he waved me over. I was nonetheless not cooperative. The DA wanted to bargain that too, but the fine was like $180. I said i was going to fight it, and he basically laughed. He said it was a sure fire loss. At the trial, which was about 20 minutes long, the officer needed to look at the ticket to read what car I was driving. And he said he pulled me over with his car after rolling thru a stop. I got him on him not remembering my carwithout reading the ticket, and that he was on foot with 2 other vehicles, and did not pull me over with his car. The judge ruled in my favor, but he didn't rule on it that night, to give me the satifaction in court. Instead, he sent his not guilty decision by mail, 2 days later. I never did go back to the prosecutor and show him the letter.

So like I said, It's mostly at the descretion of the cop. And FYI, you can be going 56 in a 55, and if he wants to stop you and say you were doing 75 in a 55, even though you did 56, there isn't a damn thing you can do about it.

Harv,

Try this link, if you can't get the info there, try cbtricks.com . Is it Am only? If it is, it is similar to the Midland 77-285, I was thinking about it. The difference between that and the 77-290 is that the 290 has detatchable faeplate and is SSB. Let me know what you come up with! The link is below..

That is why I am not going to wait. My ham friends told me likely 2006. I personally have no idea. But apparently most other countries are dropping it, and the IARU (I think), has requested it. But since the FCC is slow as shit in moving with these ideas, I will just go ahead and get it. I will not use ith though.

> it.

Sure there is. Challenge him in court using his radar gun as evidence against him. If it recorded 56 and he's claiming 75, any of the following could happen in Oregon: Charges dismissed on the 10% rule, charges dismissed because the speed was reasonable for the conditions and the speed was simply a posted advised speed and not a limit (universal speed rule), or charges dismissed on the grounds of false testimony on the part of the police officer (pretty much gauranteed to end his law enforcement career, he'd have a *damn* hard time getting a job even as a rent-a-cop with that on his record).

Your best defense is to learn the local law and obey it. Oregon tends to be pretty lax because 1) you can go hundreds of miles without encountering anything to hit, and 2) almost all traffic tickets handed out are to Californians, who don't have to pass a test to get a license[1].

[1] If you don't know the answer on the test, you can ask the clerk and get as many right answers as you need just for the asking, and I can't recall ever seeing anybody taking a driving test at the CA DMVs. I never bothered driving in California when I got stuck moving down there for a few years, it's not hard to get a ride down there if you can get the nerve up with riding with an essentially unlicensed driver.

It has already been dropped by the ITU at the last WARC. The ITU left it up
to each individual country whether to keep the requirement or not.

> But since the FCC is slow as shit in moving with these ideas,

Too bad they didn't with the BPL crap.

Freedom of choice. That was one of the arguments being used get rid of the
Morse Code test requirement with the FCC; why test for something you're
never going to use. Of course the pro code people have points on their side
too. If you want more on this debate than your stomach can handle just
mention this topic on "rec.radio.amateur.policy" and see what happens!

>Vinnie S.

There USED to be a requirement that the tests be taken in order. It's
my understanding that such a requirement no longer exists. HOWEVER,
in order for a General class license to be issued, all required
elements (1, 2, and 3) MUST be taken and passed. In other words, you
cannot skip the Technician Element 2 test just because you passed
Element 1 (5 WPM CW) and Element 3 (General).

You CAN take the Element 1 exam at any time within a year of taking
the Element 3 exam in order to qualify for the General class license.
If you pass Element 1 and Element 2 for the Technician with HF
privileges, the one year limit does not apply, as the CW endorsement
is valid for the valid period of your license.

before a become blind, I used to do a fair amount of radio work (in my spare time). I have seen many HF amps based on the simple motorola test design from one of the electronic catalogs (pre 1990's) and pretty much all of them were of the "class C" variety.

now, anyone who has had even a modicum of education in electronics theory knows how "Class C" works. unless it is heavily filtered (and most of the cheap, garden variety amps in use for the 11 meter crowd are not) it will produce excessive amounts of harmonics, not to mention extreme distortion of the input signal (the reason for this is the extremely short on state in "Class C" on the transistors).

The only clean amps I have ever found were designed at the outset to be that way ("Class A" or "Class AB-1"). These types of amps are generally in the professionally made category AND they are CERTIFIED for use by the FCC. The only exception to the cert is in the Amateur radio community (and most hams tend to build with the cleanest possible designs available to minimizeadjacent frequency noise and harmonic problems.

>
>
> Furthermore, in response to the assertion you made concerning 4 watts

no, it was not. 11 meters is regulated under part 95. it states there that the max allowed power for mode AM is no more than 4 watts RMS input and no more than 12 watts PEP for single sideband. the comment itself was a remind that such a rule DOES exist and that use of any more power than that can (by implication) attract unwanted attention.

As far as I know, there is no printed history of a radar reading. Granted 99.9%
of the time, they will write yoy up for what you sped at. But I don't think
there is a shred of evidence you can use. Not even eyewitnesses.

>Charges dismissed on the 10% rule, charges
>dismissed because the speed was reasonable for the conditions and the speed
>was simply a posted advised speed and not a limit (universal speed rule),

>anything to hit, and 2) almost all traffic tickets handed out are to
>Californians, who don't have to pass a test to get a license[1].

Again, here in NJ, it is a revenue generating system. Like I said, they just
want their fined, and not put you in your insurance poor house. The officers
have told me to challenge, because they reduce it to no points.

>
>[1] If you don't know the answer on the test, you can ask the clerk and get

>it's not hard to get a ride down there if you can get the nerve up with
>riding with an essentially unlicensed driver.

I can tell you this. Aside from full serve gas, NJ and Oregon are worlds apart.

This might make you happy:

http://msnbc.msn.com/id/6645391/

Assuming the court sees this as a major monoploy, and orders competition, BPL
will be dead. I only see BPL moving forward because of the cable monopoly.

Powell will side with the cbale companies. If you do a search on this subject,
you can't help to think that he is in their pockets. There is no other excuse
for him to side with them. They control Washington, and most state politics. How
else can you explain me having a $100 cable bill with just HBO? Besides, I can't
get DSL, it is not available. So it's cable or dialup.

Take a look at these -- Kenwood TS-520, Yaseu FT-101 series, Heathkit
HW-101, Swan 350
Lots more but these are very popular.
These are all Ham Bands only and have some vacuum tubes
A winner for a few dollars more is the Kenwood TS-830S.
>

The average person needs about 30 hours of study and practice on the code to
hit 5 wpm.

I should have added, as someone else did, there is a one year limit
on your tests. For each test you take you will be given a certificate
of completion. When you get all your testing done, and apply, all the
dates must be within a year, or you will need to retest.

>>But, as you asked, you can take any of the tests separately,

>>able to pass them all in one sitting.
>
> Are the questions from the ARRL pool the only questions I will ever see?

Yes. These are all the questions that can possible appear. Each test is
divided up into sections. A section may have 20 possible questions but
only 5 of them may be asked. Now that's just an example. Some sections
will have more some may have less. I think in the listing, the sections
are identified and the number of actual questions asked are listed.

>>Go for the gold and go for the

> I just want to get to the general level for now. I want to learn the code, is it
> 5 wpm only know? I thought you needed 13 wpm for general? I have no desire to
> use code, but will do so for the test.

No, the 13 wpm is gone, and soon the 5 wpm. Even if you have no desire to use CW, the code test is very easy. The morse test consists of a sample QSO. 5 minutes of 5 WPM code. At the end you can go for a solid copy pass, or take a 10 question test about the sample QSO. I think all you need is 7 out of 10 to pass. Download a copy of Morse Academy from "http://www.speroni.com/AH0A.html". This is free and generates morse tests in the exact format that you will hear on the real test. Studying for only 15-20 minutes a day is all that is needed to be ready in a week or two. If you get your speed to 7 or 8 WPM, you will have a little buffer and the stress of the test will be minimal.

> The only thing is that by the time I can
> save up enough for a $1,500 HF all band tranceiver, code will be gone anyway. I
> hope to have one by the next skip cycle in a few years.

I wish I could afford something like that, but it's not necessary. Browse through rec.radio.swap or rec.radio.amateur.equipment for some good deals on things. There is also ebay, but I have no experience with it. Personally, I like boatanchors. I don't think I have much of anything that's newer than 20 years old. I bought a fully functional SB-101, with power supply and speaker, for $100. It has a few scratches and requires a little maintenance, but it works great.

If you get on the ham bands you don't have to worry about the skip cycle so much. If one band isn't propagating very well, switch to another. Each band has it's own capabilities.

Good Luck

Source record: 196205

Hello All:

Looking for a good sized power transformer.

Needs a 220 or 440 3phase input, any where from 5200 to 5500 Volts out at 4 to 5 amps. Will be using a input choke power supply so that will keep the Plate Voltage at the manufacture spec's of around 5 grand on the plates.

For a pair of 3CX3000A7 tubes.

Jay in the Mojave

> within 1 year? Otherwise, I have to retake the tech?

You can take the tech test and the general test and the extra test
together -- all in one test session if you want.

If you get a Tech license first (code or no code) -- you can take the
general test and extra any time - no time limit.

However if you obtained a no-code Tech license -- you have to pass the code
test when going for general or extra

If you pass the code test but fail the written test -- you have code credit
for a year. I think this is right, if not will get back to you here.

Let us know your city and state -- we will try to put you in touch with an
examiner with a telephone number -- you can clear this all up with a single
phone call.

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our past, present and future sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins.

After Jesus died He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Holy Bible very clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed
God to save you. Welcome to the family of God.

If you decide to wait till later you may die before you get
another chance to be saved because none of us knows
exactly when we will die.

Have a great day!

Additional info -- the FCC is not keeping track of code and no code Techs

If you take the tech exam with code be sure to get a certificate of
successful completion CSCE for the code test
So when you go to take the general or extra test you will have proof of
passing the code.

Ask your VE how long the cerificate is good for (may be one year)

You might have better luck running single-phase, then all you would
need is a small pole-pig that you can get for a couple bills in just
about any well-stocked junkyard. Otherwise you will probably have to
roll your own, which can get quite expensive (iron, copper, oil, can,
vacuum pump, etc). So how much are you planning to spend on this
transformer?

Good call, Frank. A single phase, 15-25KVA pole pig, standard residential
has 240 volt input, and should work nicely. Incidentally, all three phase is
240, 277, or 480. There is no more 220 or 440, unless you change the taps or
rewind one. Much like the mis-stated 110, which is actually 120.

Get yourself a body mount for it.
Or make up a 90 degree bracket that has one of those pl259 connector mounts
on it and mount it to the bumper.
Going with a standard bumper chain mount thing has always been in a PITA.

Find a bolt or plastic push in fastener under the bumper and put a flat
mount on it. Run 2 or 3 braids to nearby bolts for better SWR.

Chris

I don't think thats totally true Randy. I installed a BGA solder
station that required 240. The only circuit I had open was a 3 phase
circuit. Only 208 volts betwwen legs, I had to put a buck/boost
transformer on it to get the voltage up to 240 to get it to run
correctly.

Most local transmission voltages are 44 kV, 27.6 kV, 13.8 kV and 6.9
kV. A little higher than what Jay was looking for.

The voltage isn't as important as the ratio; i.e, you can run a 480
volt transformer at 240 to get a lower output. And since older pigs
came in all kinds of sizes and ratios, you never know what's available
until you look.

Hello Starloard:

Yeah good going the 102 inch steel whip will work really great on top of the center of the vehicle.

I mounted a 96 inch Francis Amazer Fiberglass whip antenna on top of my Red Neck Ford F250 4x4 Truck. This thing really works great. Yeah you will trim a few low lying tree's and such, buts whats more important radio perfromance or a few tree hits.

I got a roll of RG8X coax that don't have a lot of use for, maybe you need some coax and connectors?

Hello Frank:

Yes we did have better luck goin the single phase route. But do have single and three phase avialable.

After making a new type of quad/yagi type of beam for 2 meters and listening in on the ZOO channel 147.435 MHz and a few other Los Angles 2 meter repeaters I heard a conversation talking about a 10KW broadcast transmitter that had some sort of shipping and or fire damage, but the power supply was in good shape, down in San Pedro California. I called the guy and will have the place and insurance point of contact Monaday. But it does use 220 or 240 single phase, we will see.

If this was really for a 10 KW Transmitter tha used a pair of 3CX3000 or a single 3CX6000 then this may be the ticket.

A pair of 3CX3000A7 has no legitimate use on ham or CB. Jay, you are like the guy who walks into the break room at work and says "Hi, does anyone know where I can get a detonator for some C4?". IOW, he is saying it only to impress his buddies.

The bummper on this old 1974 Statllite is mostly for show, there's no real place to put anything. I'll most likly do as I did with my old caddy in the far past, get a angle and drill holes for mounting it on one side of the rear of the body on one side. This keeps the whip out of the way for when I load my telescope into the trunk and when not in use, I can have the whip looped over to the front door area. I'll not be able to talk much near the trailer park, everyone is on brodcast t.v. ant's as there's no cable reaching down to here. Sometime in the next 2 to 3 months I'll be able to key up once more. Got a brake on the price of the whip, it was suppost to be $21.00 but because the rat shack down here had it so long, it's code showed it as only $16.00 so I grabed it.

Great price but if you don't use the center of the roof you will be highly directional. Why not put the hole in a less obtrusive place like the top rather than the highly visable side of the vehicle? Everything will be easier if you use the roof mount. Tuning, etc.

Just my two cents. ;-)

I hope he does good. Meet Bill at Sears Point Raceway, we were
there for the Wednesday Night drags, They had the track closed
for Nascar Practice. Anyway, he was done practicing and needed help pushing
the car onto the trailer, asked us to help,
no problem. Sat there and BS'd with him for a half hour then
he had to go, just a down to earth guy back then, sure he still is.

That wouldn't be transmission voltage, it would be distribution.

The test is 5 words per minute. I believe they send individual characters
at around 15 and pad the space between letters and words to bring the
average down to 5 words per minute. A no-brainer.

Check this out:
http://groups.yahoo.com/group/HamRadioHelpGroup
```

A great group which helps folks get their first ticket and/or upgrade their current ticket. Open to all (including cb, scanner enthusiasts, frs, murs, hams, and whatever. No flames.).

Best regards from Rochester, NY
Jim

One word of advice... don't buy the Radio Shack ball mount for that whip. It has no serrated teeth (like the Antenna Specialists) that hold the ball from rotating under the weight of the antenna if mounted on the vehicle side.

Right now I'm not 100% sure of how long I'll have this car, if I can find someone that would trade something like a 70 to 74 caddy or a station wagon for this thing, I don't want to be pluging a hole in the middle of the roof. Plus if I do keep it, then someday I would want to do what I had on my caddys back in the 70's, a pair of steel whips on the rear. Plus being I've only got an old AM CB, I'll only be talking in the local area or even just listening to the chatter. Plus I do things on the CHEAP, as I live on a fixed income too. And sitting out away from the trailer park, summer time will be when I'd be on the air mostly.

I'm no stranger to CB'ing, got my numbers in Hawaii back in 71.

KAPA 4318

Used to park in the beach parks with the car facing east and shoot skip with a stock 23 channal Sears CB.

>a single 3CX6000 then this may be the ticket.

The problem is that you are getting into a power range that usually
requires custom-built components. It would be much easier to build up
a transmitter around a 10kW transformer, instead of building it up
around the tubes which are pretty much standardized components.

But why are you even messing with triodes? Unless you like to
constantly readjust the neutralizing cap, or you run them grounded
grid and pump in a kW or so, you might be much better off with a
couple large tetrodes. Broadcast pulls are cheap, in regular supply,
are usually 80%+, and will last a long time running them AB1 which
requires almost no drive power at all. Get even bigger tubes and you
can reduce the heater voltage which will make the tubes last even
longer. Plus, if you use resistance coupling then you can open up the
input bandwidth -and- disregard the need for neutralization, with much
better efficiency and longer tube life than grounded-grid triodes.

Just something to think about.

Thanks. That 18 wpm seemed rather quick on the first lesson. It wasn't so much
the speed of the letter, but the lack of gap between words.

But the whip makes such a nice "BONGGGG" when you hit the right object. ;-)

That being said, I think the Wilson is the better choice. If he's driving a Plymouth he'll probably have the same problem I had with my '68 Dodge Coronet. Thin top "skin". I'd worry about that whip ripping right out.

No kidding. In some parts of the country (like where I'm at), we also have to contend with things like 12' clearance under 110,000 volt, uninsulated power lines for interurban trains. Hitting one of those with an antenna would give a whole meaning to putting some fire in the wire. I'd probably get a taller antenna if it weren't for that and parking garages (and as it is, I'm steering around lighting fixtures in parking garages).

Hmm, now who are you supposed to be? You have no posting history
before now, so it's highly likely that you're someone's sock puppet.

But to your last statement, I agree, I do sometimes "do my share", but
it's usually reflexive and in response to an uncalled for personal
attack aimed in my direction.

If one want's to stay focused on the topics, I am more than happy to
remain equally focused. But when the scope of the topic changes, I
will respond in kind.

Yes, you probably should. But periodic speedometer calibration is not
on the list of "maintenance" items in the owner's manuals, nor is it
required as a part of (At least in my state) annual inspection. I'm
not even sure if anyone (other than the dealer) can even perform such
a service. It's clearly not something they advertise.

>estimate a fine from.

That's pretty much what they do here as well. In the state of Pa.,
RADAR is only allowed to be used by the state police (You actually
have to be "certified" to use it). The locals use VASCAR, which is why
there are so many white painted lines across the road (Which also
gives alert drivers a heads-up as to where the speed traps will

usually be).

>They seem to radar everyone in areas where there are actual speed limits
>when I see a speed trap in a limit zone. Though I never see anybody pulled
>over, everybody just slows down for the speed limit and then drops the

That's the whole basis of the "Smokey Reports" that run across the CB.
At first the cops were pissed at this method of circumventing the law
(As they are with flashing headlights). Now the cops use it to their
advantage. Sometimes they park an unmanned car near a busy highway and
let the CB'ers pass the word, and everyone slows down, which is all
they wanted anyway.

>descretion of the cop.

Well, in all honesty, it mostly is at the cop's discretion, and they
know that if they want to really bust someone's stones for 1 or 2 MPH
over, they stand a good chance of losing in court. RADAR has been
taken to court before (I remember a somewhat famous one involved
pointing a RADAR gun at a tree and recording over 100 MPH). Traffic

volume, calibration certification, humidity, weather, terrain and a host of other conditions can affect the accuracy. If you are someone who does his homework, and presents this in court, most judges will throw it out for such a small number.

VASCAR since it is a manual timing device, can be even more prone to inaccuracies.

It's more of an unwritten rule in Pa., that they "give" you 5 MPH, but all of the cops I know pretty much told me the same thing, and that is that they don't start pulling people over until they hit 10 MPH over.

I'm sure it's different in other states.

Oh don't get me wrong Jim, he & JR's been one of the best things to happen
to Nascar for years. It's brought a lot of young
people to help bolster the fan base and it will help carry Nascar
into the future.
He's an excellent driver, he just doesn't do anything for me.
Jr, I feel is more of character along with being a good driver too.
He has all his old man's skills, along with his image, but a style
that personify the modern era.

>Well, in all honesty, it mostly is at the cop's

>discretion,

>It's more of an unwritten rule in Pa., that they

>"give" you 5 MPH,

That's a far cry from you claiming it was a "requirement" the Pa. police *give* you the extra speed of a few miles per hour. Nevertheless, you illustrate once again you speak of things you know nothing of (the law) and do not need Frank to make you reverse your earlier position. Since you realized your error, there is no need to provide you with the Pa. vehicle code. Flip-flop.

I also have seen many amps of class C variety, but I also have seen many
that are not.

>now, anyone who has had even a modicum of

>education in electronics theory knows how

>"Class C" works.

You invoked the class. No one mentioned the class of amps, yet you
referred to "those amps" when no class or brand amp was cited. It was
then I asked you what amps you were referring, as the inquirer mentioned
nothing of the sort.

>unless it is heavily filtered (and most of the

>cheap, garden variety amps in use for the 11

>meter crowd are not)

He said HF, you said 11 meter. Is 11 meter no longer considered HF?

>it will produce excessive amounts of

>harmonics, not to mention extreme distortion

>of the input signal (the reason for this is the

>extremely short on state in "Class C" on the

>transistors).

>The only clean amps I have ever found were

>designed at the outset to be that way ("Class

>A" or "Class AB-1"). These types of amps are

>generally in the professionally made category

>AND they are CERTIFIED for use by the FCC.
There are tons and tons of homebrew amps out there that are
exceptionally clean that carry nor need no certification.

>The only exception to the cert is in the

>Amateur radio community (and most hams

>tend to build with the cleanest possible

>designs available to minimizeadjacent

>frequency noise and harmonic problems.

Well, at least we are are on the same page concerning such. In response
to the assertion you made concerning 4 watts being the rule, I invoked
it was irrelevant to the poster's inquiry.
no, it was not.

> 11 meters is regulated under

>part 95.

Indeed it is. How you draw a connection to such from the poster
inquiring of an HF amp is nothing but assumptuous, conjecture, and
cynicism on your part.

>it states there that the max allowed power for

>mode AM is no more than 4 watts RMS input

>and no more than 12 watts PEP for single

>sideband. the comment itself was a remind

>that such a rule DOES exist and that use of

>any more power than that can (by implication)

>attract unwanted attention.

By your own admission.."it was a "remind"....there you have it...not
relevant at all.

_
I then made to you the radio-friendly
suggestion: Hey Eric, fire up your ears and give a listen. Air-a-zone-a
is loud in my receive for the past couple of days. Some of those guys
get real edgy when the sandpile stations key it up. Tell B-O-B I said
hello. Bayou Charlie is walking all all over him these days.

>really? your client isn't properly configured for

>quoting then. the way you worded it implied I

>stated something I did not.

Yea, I've heard that before, and I also have viewed this group from
afar, such as google. . The manner in which I now quote is perfectly
acceptable to all those who know to configure their own browsers
properly. Check google, it appears just fine. It is operator error,
those who are unable to distinguish such things, but you are an
exception to the rule for obvious reasons. I'll try and remember to
delete other posters when responding to you in the future.
To which you replied:

>quoted someone else and tried to make it look
>like me? try again.

Loosen up, Eric.

>pardon my being slightly anal retentive. I just

>don't like having words attributed to me that I

>did not state.

>meanwhile... back to the radio.

Not a problem. Now that you know that act was never committed,,as you
say,,back to radio.
So fire up your receive,,,I have been in direct contact with the Phoenix
area on an almost daily basis on cb. Had a hoot and holler bunch of fun
over the weekend. Redfish are jumping, and weather is heaven sent.
>--

>DE N7ZZT

>Eric Oyen

Hams have been making contacts with Cuba for many many years.

Also North Korea recently. No operations at the moment tho. Their choice - not ours.

For countries Hams can contact see the DXCC list at URL;
http://www.arrl.org/awards/dxcc/dxcclist.txt
335 entities there -- both countries and islands, etc -- note that Islands such as Guam count as an entity.

I am not aware of any country USA Hams are forbidden to contact including Libya, No Korea, Cuba, Iran, China, Yemen, etc.

Countries may chose to prohibit Ham operations -- their choice not ours. Example Albania and China were off the air for many years -- but are now allowed. Some countries have very restricted license issues making them very rare.

During the cold war, contacts were allowed with the Soviet Union.

Consider getting a Ham license -- pretty easy these days -- there is a no-code VHF license and the HF licenses only require 5 wpm code.

Yep. And as the domain name suggests, the site sucks royally.
First, we get plastered with bullshit graphics and huge text.
After scrolling to the bottom of the page, we now get to enter the site and
are forced to read a court order no less.

IMNSHO, even though "radio shack" is a registered trademark, that does not
give exclusive rights to the words as the term "radio shack" had been around
and established well before the business came into existance.

Problem is, you apparently got nailed for copyright infringement.
Shouldn't be messin with companies who have high priced attorneys.

lol...

Nah, the big green machine was stock and hadn't been "restofied". Great shape and only had about 45k on the clock when I bought it in '90. I sold it in '95 or so with around 65k on it. The guy I sold it to dropped in a 440, I don't know what he did with the 383, and turned it into a Super Bee clone. Ended up being a pretty nice car, I still love the look of that SB hood scoop, but I would have used a "440" rather than a "500". 500's were _heavy_.

Any custom shop or instrument shop can recalibrate your speedometer for hardly more than pocket change. There's really no excuse for not getting it done.

Lucky you. All departments use laser here. Your detector won't go off until the cop is actually checking your speed (in which it's too late). My theory is, if you're driving too fast to see the speed trap, you're driving too fast to spot a real hazard at that speed. Nothing like having rush-hour traffic shut down because some jackass driving 60 in dense fog creams a deer on the freeway.

> That's the whole basis of the "Smokey Reports" that run across the CB.

Yeah, I'm usually the one spotting them, I know how they work. 8:O)

> Sometimes they park an unmanned car near a busy highway and

You must have an amazingly rich police department if they're able to have expensive surplus equipment to play games with like that.

Heh, wishful thinking. I'd think CB is more likely to go to the wayside
given the clearer sound with less interference on amatuer bands. Heck, you
can get a lot of the same traveller information on the right repeaters in
Oregon as you can on the CB, without the tradgedy of the commmons.

From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <1112rdmpld49q0d@corp.supernews.com>
Source record: 196250

Hello Frank:

Yeah ok on the Triodes, there were dirt cheap, so thats what we are using them. They will need a significant driver buts thats easy.

I have the power supply setting in my front yard setting on a pallet, with a tarp over it now. Looooooooooooong story!

The power levels this will generate will be no dought be significant and larger than I care to admit to, and coax and connectors will be used.

This isn't for use as a on the air linear amplifer, but for spectral analyst for mining. In the Mojave Desert of course. Enough said. I don't know what would be used as coax and a matching section for antenna at these power levels. But can only image that it would be big bucks incorporated. With many Capital Dollars signs.

I also have a line on a 10KW radio station in Bishop California. But probably will not need it. If this amp is able to produce the arc for spectral analysts chamber as we think it will, it will allow a new concept in mining. The real ball cruncher here will be the diesel generator that must be flown in or a Bull Dozer will be needed to make a road into the area at a truck load of money.

If the process works as we think it will a professional amp will be bought later on But only after the process is verified, but when starting out cheap and inexpensive methods must be taken.

Jay in the Mojave

Have you always had that lisp or is it a more recent effectation? Musta been tough for you growing up to have to put up with all the beatings and such.

Explains a lot though.

Jeff

2662. FREE MIKE WIRING TIPS & TRICKS

Newsgroup: rec.radio.cb
Date: 2005-02-15 03:46:49 UTC

2663. FREE! "THE CB EPROM DATA BOOK" OF FREQ. MODS

Newsgroup: rec.radio.cb
Date: 2005-02-15 03:46:53 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <b5s211tsii1f9pvmk0v7i9tmc6o3uh22mr@4ax.com>
Source record: 196254

FREE!!

For advanced techs and serious radio hobbyists, we're now offering a FREE copy of our previously published "CB EPROM DATA BOOK" by Martin Pickering. (EPROM = Erasable Programmable Read Only Memory.) We sold it for many years but it's now out of print. This little manual of 60 illustrated pages is an absolute GEM of CB technical knowledge you'll just never find anywhere else. And it's yours for FREE from our Web site.

This book reveals the secrets of advanced channel programming, and picks up where our "CB PLL DATA BOOK" (www.cbcintl.com/pllbook.htm) leaves off. You'll get a thorough background in how these amazing programmable chips can be used to modify many popular CB PLL circuits for expanded frequency coverage. Covers the basic programming techniques, and even includes real PC board artwork for making EPROM circuits. Sample artwork includes EPROM boards for the popular MB8719, PLL02A, ï¿½PD2824, and ï¿½PD858 PLL circuits.

Best of all, the price is right--namely, FREE! Download your FREE copy of "THE CB EPROM DATA BOOK" (948 KB Adobe PDF) at:

www.cbcintl.com/docs/EpromBook.htm

Don't forget to check out all our other CB specialty books, plans, kits, & high-performance accessories at:

www.cbcintl.com

SAVE MONEY! We regularly run EBAY auctions in which you can save up to HALF the cost of our most popular CB books and accessories. To see what's currently on sale, double-click the line below:

2664. CB REPAIR & MODIFICATION BOOKS AT 40% OFF

Newsgroup: rec.radio.cb
Date: 2005-02-15 03:46:59 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <h5s2119hmhf2bshodevktb51gmqi9rjfl6@4ax.com>
Source record: 196256

To learn the technical TRUTH about CB Radio without all the hype from people who are just plain ignorant, check out the following books from CBC International. They're selling right now at a big discounts on our EBAY & AMAZON stores too.

Check it out!

To see exactly what these books look like, plus all the specific, chapter-by-chapter details, see our Web at:

www.cbcintl.com

Some of the books included are:

BOOK #1: THE "SCREWDRIVER EXPERT'S" GUIDE To Peaking Out & Repairing CB Radios. List $25. The most popular "big dummy's" guide ever published on do-it-yourself CB repairs & modifications. Covers peaking of receivers, transmitters, modulation, mike problems, antenna & SWR problems, detailed frequency modifications for both crystal & PLL radios. Loaded with charts, illustrations, and specific instructions for most brands including the new export models. This latest edition also covers slider and broadbanding tricks, FM conversions, and much more!

BOOK #2: THE CB PLL DATA BOOK. List $20. The only complete reference source on CB PLL synthesizer circuits ever published! Detailed PLL theory explained in layman's terms. How they work, and how to modify them for many more channels. Includes specific PLL block mixing diagrams, truth charts, & IC pin function diagrams for nearly every PLL chip ever used. Covers all the most popular U.S. & export chassis, with specific listings of all models using the chip.

BOOK #3: UNDERSTANDING & REPAIRING CB RADIOS. List $42. Giant 370-page technical book for the professional repairman. Picks up where the "SCREWDRIVER EXPERT'S" GUIDE leaves off. Includes circuit descriptions & troubleshooting guide for 23- & 40-Ch., crystal & PLL, solid-state & tube, AM, FM, SSB, CW, American & export models. Covers test equipment (& where to find it), transistor basics, synthesizers, receivers, transmitters, power supplies, T/R switching, antennas, interference, parts & accessory sources. Over 350 illustrations including schematics, charts, and photos. Huge subject index also lets you look up repairs by symptoms. This is "must" reading for any serious CB technician!

For details on our Galaxy-Ranger Service Manual (2nd Ed.) go to:

www.cbcintl.com/galaxy.htm

SAVE MONEY! We regularly run EBAY auctions in which you can save up to

not a big problem
just stop cross posting thesse newsgroups

here is you problem
you want to inflick trucker hate on MAYBE an innocent gay guy with no much
idea, of what is going on

as subtil as a brick

SO A GAY GUY SHOWS UP
with a mouth

god help you idiot

a racist by any other name is a K.K.K.

so just stay off the gay site when u post

i am a trucker, and won't be bothered with your pages
do something worthwhile like what kind of beer do you drink with a slime
burger.

best burger in your state?
why no buddy loves YOU?

never threaten a fag
u8nless u know u can cope.

I'm not clear about your plan, but if you're thinking NMR then it's
already been tried with dismal results. The problem is that most
minerals have enough conductivity to render the results useless. But
if you figured out a solution then go for it.

How about a PTO generator? You can take 10-25kVA right from the truck.

Just for kicks and grins, when I was at the local auto parts/garage
the other day, I asked in a matter-of-fact way if they did speedo
cal's. The guy looked at me like I grew a second head.

Yes, I imagine there are shops who can handle this. But with the newer
OBD-II ECM system on modern cars, the speedo is often a little more
complex than a simple mechanical pointer. Other than the few specialty
shops and the dealer, I doubt if the typical generic garages that most
people go to can handle it. Most people avoid the dealer once their
warranties expires as they're generally more expensive than the local
garage. It's just not something that anyone talks about.

Detectors are ineffective against VASCAR as there is no "beam". It's
simple mechanical timing. But the manual nature of this technique is
what opens the door to inaccuracy claims when someone is cited for
going a scant 1 MPH over.

It all depends on your perspective. If that parked car prevents
accidents, the money saved on emergency response services more than
makes up for the loss of an "active" patrol car.

True to form, you show up to pick yet another bowl of nits. It is an
unwritten "requirement" in order to avoid the pain of fighting in
court. The courts have a history of throwing out speed citations for
small amounts, due to the potential for inaccuracies in both the car
speedometer and the speed measuring devices. The success rate for
having these fines "stick" increases greatly when the amounts exceed 5
MPH over.

I've gotten the same story from several different cops who work in
different precincts and the state police.

>given the clearer sound with less interference on amatuer bands.

I'm not trying to slam the service, I'm just realistically considering
technological advancements in the wireless world, and the probability
that the current service of ham radio could hope to fit in in that
picture. CB is in the same boat more or less.

> Heck, you
>can get a lot of the same traveller information on the right repeaters in
>Oregon as you can on the CB, without the tradgedy of the commmons.

In 30 years, it will be even more likely that you'll have satellite,
internet, and local sensors giving you instant traveler information,
to display on your vehicle operator's console. You will also have
wireless phone service and/or an internet VOIP chat service available.
All of which will make having an analog 2-way radio superfluous.

Don't get me wrong, I am approaching the age where nostalgic charm
starts to appeal more than technical superiority. But at some point,
things will have to "give", especially when the clamor for bandwidth
heats up as more and more wireless services compete for "air time".

>Vinnie S.

Well, I of the 2 problems is solved. The cutting out on SSB after 3 seconds is solved. The Astron took care of that.

But I am still having that "carrier" problem on SSB. For some reason, as soon as I speak into the mic, the radio holds power, as if it were on AM. The TX meter on the radio shows this, and the SWR/power meter shows this. The power is not fluctuating with modulation. The power is not high, about 20 watts peak. Seem the previous owner had it turned down. Like I said, it seems to do this as soon as I speak into the mic. Even a subtle noise will send it to max, and stay there. Changed mics, and have the same problem.

I am going t try this in the car and see what I get.

Vinnie S.

>much all of them were of the "class C" variety.

I also have seen many amps of class C variety, but I also have seen many
that are not.

>now, anyone who has had even a modicum of

>education in electronics theory knows how

>"Class C" works.

You invoked the class. No one mentioned the class of amps, yet you
referred to "those amps" when no class or brand amp was cited. It was
then I asked you what amps you were referring, as the inquirer mentioned
nothing of the sort.

>unless it is heavily filtered (and most of the

>cheap, garden variety amps in use for the 11

>meter crowd are not)

He said HF, you said 11 meter. Is 11 meter no longer considered HF?

>it will produce excessive amounts of

>harmonics, not to mention extreme distortion

>of the input signal (the reason for this is the

>extremely short on state in "Class C" on the

>transistors).

>The only clean amps I have ever found were

>designed at the outset to be that way ("Class

>A" or "Class AB-1"). These types of amps are

>generally in the professionally made category

>AND they are CERTIFIED for use by the FCC.
There are tons and tons of homebrew amps out there that are
exceptionally clean that carry nor need no certification.

>The only exception to the cert is in the

>Amateur radio community (and most hams

>tend to build with the cleanest possible

>designs available to minimizeadjacent

>frequency noise and harmonic problems.

Well, at least we are are on the same page concerning such. In response
to the assertion you made concerning 4 watts being the rule, I invoked
it was irrelevant to the poster's inquiry.

>no, it was not.

>.11 meters is regulated under

>part 95.

Indeed it is. How you draw a connection to such from the poster
inquiring of an HF amp is nothing but assumptuous, conjecture, and
cynicism on your part.

>it states there that the max allowed power for

>mode AM is no more than 4 watts RMS input

>and no more than 12 watts PEP for single

>sideband. the comment itself was a remind

>that such a rule DOES exist and that use of

>any more power than that can (by implication)

>attract unwanted attention.

By your own admission.."it was a "remind"....there you have it...not
relevant at all.
–

I then made to you the radio-friendly
suggestion: Hey Eric, fire up your ears and give a listen. Air-a-zone-a
is loud in my receive for the past couple of days. Some of those guys
get real edgy when the sandpile stations key it up. Tell B-O-B I said
hello. Bayou Charlie is walking all all over him these days.

>really? your client isn't properly configured for

>quoting then. the way you worded it implied I

>stated something I did not.

Yea, I've heard that before, and I also have viewed this group from
afar, such as google. . The manner in which I now quote is perfectly
acceptable to all those who know to configure their own browsers
properly. Check google, it appears just fine. It is operator error,
those who are unable to distinguish such things, but you are an
exception to the rule for obvious reasons. I'll try and remember to
delete other posters when responding to you in the future.

To which you replied:

>quoted someone else and tried to make it look
>like me? try again.

Loosen up, Eric.

>pardon my being slightly anal retentive. I just

>don't like having words attributed to me that I

>did not state.

>meanwhile... back to the radio.

Not a problem. Now that you know that act was never committed,,as you
say,,back to radio.
So fire up your receive,,,I have been in direct contact with the Phoenix
area on an almost daily basis on cb. Had a hoot and holler bunch of fun
over the weekend. Redfish are jumping, and weather is heaven sent.
--
>DE N7ZZT

>Eric Oyen

>Phoenix, Arizona

>e-mail: n7zzt(at)hotmail(dot)com

>the difference between intelligence and

>stupidity is that intelligence has its limits.

I like that saying. It reminds me of my most-favored status ng pets who insist on testing theirs daily.

>I hate to say it, but you are just nitpicking

>now......

>you didn't get the point the first time

You had no point, You attempted to make the thread about legalities. Stay on topic.

>and I am not going to go through this again for
>you.

Excuse you, Eric, but you are the one invoking class C amps and legalities when the poster asked nothing of either.

>either take what I said at face value or shut up
>about it.

Oh wow, a nasty, confrontational line of tripe from you..gee Eric, at elast you admit you are "anal retentive".

> harping on it further will not get you a

>response you want anyway.

Your emotional response is all yours, Eric, please don't try and blame others for your feelings of inferiority. There is enough of that going on from those who have a great deal to learn about communications.

2691. Impedance mismatch affecting sideband?

Newsgroup: rec.radio.cb
Date: 2005-02-15 14:57:06 UTC
From: "Vinnie S." <none@coldmail.com>
Message-ID: <4434111ami59gen1s5q8p073j94co8suca@4ax.com>
Source record: 196281

While I solved one problem on SSB, another continues.

I am still having that "carrier" problem on SSB. For some reason, as soon as I speak into the mic, the radio holds power, as if it were on AM. The TX meter on the radio shows this, and the SWR/power meter shows this. The power is not fluctuating with modulation. The ALC was not cranked up. The power is not high, about 20 watts peak. Like I said, it seems to do this as soon as I speak into the mic. Even a subtle noise will send it to max, and stay there. Changed mics, and have the same problem.

So then I tried this.

I took this radio and put it in my car (it's my only radio). When I connect it directly to the Wilson 1000 barefoot, I get the same problem on SSB. However, when I go thru the amp, it works perfectly, no power unless I modulate. This is also true if the amp is turned on or off. It appears to be an impedance mismatch. Since the amp input is a perfect match, the problem goes away, whether or not the amp power is on or off. Here is the kicker. The SWR on my home antenna is about 1.3-1.5 across the band.

Any suggestions?

Vinnie S.

This is a common problem. In many cases, if you remove the cover the
problem will go away. The final stage is going into oscillation and
the "carrier" you see is that oscillation. Usually (and unfortunately)
the oscillation falls in the 29 Mhz area.

Sometimes this problem is caused by added mods that people add to try
to squeeze a few more watts out of it. There are added capacitors on
the bottom side of the board that can cause this. If you see an extra
cap (or two in parallel) on the underside of the board connected to
the final, remove it and that should cure your problem.

You're right. I shouldn't have deviated from my original stance since,
as it turns out, I was right about it.

See:

http://members.aol.com/StatutesP1/75PA3368.html

Pay particular attention to 3368 (c) number 4., which states:

"No person may be convicted upon evidence obtained through the use of
devices authorized by paragraphs (2) and (3) unless the speed recorded
is six or more miles per hour in excess of the legal speed limit.
Furthermore, no person may be convicted upon evidence obtained through
the use of devices authorized by paragraph (3) in an area where the
legal speed limit is less than 55 miles per hour if the speed recorded

is less than ten miles per hour in excess of the legal speed limit.
This paragraph shall not apply to evidence obtained through the use of
devices authorized by paragraph (3) within a school zone"

So what were you saying about knowing the law?

Thanks. I have not added any mods. I wanted to add some Schottkey diodes for the
receive. However, I have not gone thru the radio to see if the previous owner
added any mods.

Damn !!!!

I was hoping I didn't have to use a DMM. The DMM I have doesn't have current measurements. Well, it's not mine. Mine was actually (Fluke 77). stolen. I have a scope, and freq counter. But to way to adjust bias current. I will ne to get a hold of another DMM.

I have seen the same situation you are describing in a 2510. The guy never used it SSB, and it worked fine on AM. He later sold it to someone who did use SSB. Turned out the "Tech" who did the frequency mod on the radio was also asked to tune it for maximum. He did so, but never noticed it went into oscillation on SSB. After resetting the bias to the correct level, the

problem went away.

Hope this helps.

>hour in excess of the legal speed limit.

Why did you snip the obvious? I'll tell you why, it directly contradicts what you claimed.

>Furthermore, no person may be convicted

>upon evidence obtained through the use of

>devices authorized by paragraph (3) in an

>area where the legal speed limit is less than

>55 miles per hour if the speed recorded is less
>than ten miles per hour in excess of the legal

>speed limit. This paragraph shall not apply to

>evidence obtained through the use of devices

>authorized by paragraph (3) within a school

>zone"

That there is no rule, unwritten or written that requires the officer to ignore a speeder. To wit...the portion you conveniently snipped shows how your claim is not across the board and is an exception, as it pertains ONLY when traveling in areas with posted speeds LESS than 55, whereas the the posted interstate (65 MPH) speeds, of which Pa. finally raised from 55 not too long ago, are the speed LIMITS imposed by the state of Pennsylvania. Once again, so you are no longer confounded and suffering and blaming me for your ignorance,, Pa. has no rule OR law, that requires a LEO to give a window of 5 mph (or ANY speed) to speeders in excess of the state speed limit, which happens to be 65 MPH.

>So what were you saying about knowing the

>law?

>David T Hall Jr.

>"Sandbagger"

Just that you have a devil of a time comprehending it and blame others for your ignorance.

>bowl of nits.

So sorry you feel persecuted again, Junior, yet, illustrating your self-contradictory claims has a rather unnerving effect on you. Call it whatever your bruised ego dictates, you talk sideways.

>Nonetheless, you are picking nits. As you

>always do.

Pay attention. Pointing to your inability to discuss a topic without focusing on the poster is presenting an obstacle you have yet to overcome. Such is the way with those suffering massive communication deficits.

-
Not relevant. Your claim that is was a requirement degraded to your current claim it is now a "unwritten" requirement, yet, according to you, 'friends' of yours are cops who affirmed both your claims. Well, Dave, you are full of shit again. I posed your question to several LEOs in a traffic forum and you are wrong. Need the
URL? Care to join me where you can be educated by actual Pa. leos?

>That's interesting. Your adoration with me has

>made you go through the trouble of actually

>seeking out and finding these mythical LEO's,

>just to pose this question.

Adoration is you invoking my name over the weekend no less than seven times when speaking to other newsgroupies about topics of which you are unable to focus. As you stated
last week, you "prefer" to focus on the chatter as opposed to the topic. You would "rather" talk about me as opposed to radio, as I fascinate

you, so. Adoration, indeed.

>Which you did and got a reply back in less

>than a day. Wow.

Actually, I think it came the same day.

>I'm sure this "group" in the same place as that

>fictitious military group that you tried to snow

>Frank with.

But of course, This is the same manner in which you are "sure" roger beeps are illegal, and that other people among these pages suport such a learned ignorant contention.

> But sure, go ahead and give it to me.

Tell ya' what, Dave..just to keep you honest (and screaming like a school girl), I'm going to give it to anyone in this group that emails me and requests it. Of course, you are free to provide for your claim first, and I will provide for my claim, secondly, to you. I know you have problems with proper etiquette and communications, but that is the manner in whcih society operates. Stomping your foot and throwing tantrums about "twisted did this to me" and "twisted did that to me" don't cut it, junior. You want claims provided for when you demand, provide for your own claims you amde first.

>If nothing else, it'll be good for a laugh or two.

Not nearly as good as the one that all of amateur radio is enjoying with you maintaining roger beeps are illegal and that others agree with you...only, you are struggling with providing for a single person who agrees with you.

–
No, you haven't been told that by any Pa. cop, and the LEO forum serves to illustrate your degeneration caused by pathological lies.

>Prove it.

You initiated this "prove it" game, you provide for your claim, first.

> Provide the URL.

>Prediction: nothing will result.

You know yourself, well, Dave, now if only you could learn to like yourself, you may have a chance at living like normal society does.

>whereas the the posted interstate (65 MPH) speeds, of which Pa. finally
>raised from 55 not too long ago, are the speed LIMITS imposed by the
>state of Pennsylvania.

There are still many limited access roads which are posted at 55. In fact, the majority of places where they allow 65 are those areas where the highway is not in a "congested" (meaning densely populated) area. In most others, it's still 55.

Now, Read the statute again, slowly this time:

"No person may be convicted upon evidence obtained through the use of devices authorized by paragraphs (2) and (3) unless
the speed recorded is six or more miles per
hour in excess of the legal speed limit."

That applies to all speeds.

The following paragraph applies specifically to speeds below 55:

"Furthermore, no person may be convicted upon evidence obtained through the use of devices authorized by paragraph (3) in an area where the legal speed limit is less than 55 miles per hour if the speed recorded is less than ten miles per hour in excess of the legal speed limit."

Which means (for the cognitively impaired), that when using a method other than RADAR (Which usually means VASCAR) on a road where the posted speed is less than 55, they must give you 10 MPH leeway, or an additional 5 MPH over what the previous paragraph called for..

The minimum that they have to give you on any road and with any speed measuring device is 5 MPH. On certain other roads and with non-RADAR speed devices, they have to give MORE.

The only exception to this rule is:

"This paragraph shall not apply to evidence obtained through the use of devices authorized by paragraph (3) within a school
zone"

A school zone is the only place where they can pop you for less than 5 MPH over.

> Pa. has no rule OR law,
>that requires a LEO to give a window of 5 mph (or ANY speed) to speeders
>in excess of the state speed limit, which happens to be 65 MPH.

I just posted it. If you can't comprehend it, that (as usual) is your comprehensive deficiency showing.

Now go ahead and try to spin the school zone angle in another feeble attempt to prove me wrong.

Don't fret though. The statistical probability is that you'll eventually find something you can ding me with someday. It's just that today isn't it.

Now where is that LEO group?

>antenna is about 1.3-1.5 across the band.

The final oscillation is most definitely related to output load
impedance. When I first stumbled onto this problem (In some older dual
final Galaxy radios), the problem would never show up on the bench
when I used my dummy load. It also didn't show on my base antenna. But
the problem would happen on the customer's antenna. I managed to force
the problem on my antenna by using a tuner and de-tuning the match
until the oscillation occurred.

The cover of the radio acts like a capacitor, and it's very sensitive
to it.

Did you see any bottom mounted caps connected to the final
transistor? If not then you might have to mount a piece of grounded
shield plate over the final or experiment with bypass caps until you
kill the oscillation. But try setting the bias first. If I remember
right, the bias for the final should be set at somewhere in the 30 -
40 mA range. I'll check the manual and give you the exact value.

I kinda figured oscillation also. Bad bias can cause it. Make sure that's correct. See if any one had hinkeyed around in there, Check serial numbers, did these not use 2 different finals at different times? When changing finals did they change drive components? Unfortunately I do not have a schematic here to look around. Did anyone do any "coil spreading"?

LOL "coil spreading". See this is exatcly what I was talking about.
Someone is ALWAYS inside a keyclown radio to try and get it to do more
power, more channels. The result is all kinds of problems. You would
never have these problems if you ran legal gear.

But hey it makes more power!!!!! (right where you don't want it) sometimes even lessens the fundamental freq output, but hey it looks good on a meter. (sound of head hitting desk)

I also forgot to mention looking for grounding problems internally, Check all points where the circuit board would ground to the chassis. If it was used mobile they may have worked loose/corroded. Pull those screws out, clean with deoxit and reassemble.

Chad

You certainly did. You snipped paragraph (1), which authorizes the use
of "a mechanical or electrical speed timing device", devices that are
-not- limited by paragraph (4). IOW, if the cop -can- bust for doing
56 in a 55 zone if he uses a mechanical speed timing device (e.g, the
speedometer in his own vehicle).

So what were you saying about knowing the law?

<snip>
>I snipped nothing from that passage.

After reading it again I noticed that you also snipped part D from
that subsection, which requires proper calibration of all speed timing
devices, and declares that proof of such calibration "shall be
competent and prima facie evidence of those facts in every proceeding
in which a violation of this title is charged". So if there the device
has been calibrated as required under that part, there can be no legal
challenge of its accuracy. This is in direct contradiction to your
claim that "The courts have a history of throwing out speed citations
for small amounts, due to the potential for inaccuracies in both the
car speedometer and the speed measuring devices."

Maybe -you- should read it again.....S-L-O-W-L-Y.

We've now added all our crystal charts for free download/printing
(PDF) on our site. These 36 charts cover about 95% of all American
mobile & base CB models, and show exactly which crystal(s) affects
which mode or channel. Very useful for troubleshooting "dead
channels" symptom, or for modification to 10M or other freqs.

Check 'em out at: www.cbcintl.com/xtals/xtals.htm

We specialize in CB books, plans, kits, and high-performance CB
accessories. Please visit our Web site to see all those "goodies" you
just can't find anywhere else!

www.cbcintl.com

You can also download our complete CB catalog, or just the Order Form
from that page. We've also got a new Email Order Form (for VISA/MC)
if you're in a hurry.

SAVE MONEY! We regularly run EBAY auctions in which you can save up to
HALF the cost of our most popular CB books and accessories. To see
what's currently on sale, double-click the line below:

http://stores.ebay.com/id=2993436&ssPageName=L2

You said that "politics transcends logic". Unfortunately that's the
truth because there are too many people like you who ignore logic
whenever it conflicts with their beliefs. For example, it is your
belief that I "implied" something different than what I said. Yet my
statement implied nothing of the sort. Your mistaken beliefs are the
result of what happens when reality collides with your own distorted
perceptions, Dave.

>>>Politics is a matter of deciding which "side" makes the most sense to

>>
>>
>>To some it's based on faith.
>
>To most it is based on faith to some degree. To believe in a
>particular ideology, you have to have some faith that it is the
>"right" choice.

Faith is the belief in the unknown. When it is known that some
policies work and other policies don't, then adopting the policies
that are known to work is not an exercise in faith, but rather a
logical conclusion based upon past performance. And past performance
is a perfectly valid reason to logically conclude that Bush is a poor
choice for president. It's also consistent with your electronic

troubleshooting technique; by your own admission, if a specific component is commonly the cause of a specific type of failure, the failure is most likely due to that component.

>> To some it's based on logic.
>
>Logic can help bolster your core beliefs,

Logic is not an enhancement of a foundation -- it -is- a foundation. It is the process of rational thought. To ignore or abuse logic is, by definition, to think irrationally. You can use logic to rationalize your "core beliefs" all you want, but if those beliefs ultimately conflict with logic then all your rationalizations fail. And that's what's causing your current meltdown, Dave.

> but there is little about
>the whole political process that can be explained by logic alone.

Actually, most (if not all) of the political process -has- a logical explanation. The problem is that some of the motivations happen to be irrational, emotional, or based on "core beliefs".

>>To some it's
>>based on physical appearance, or emotional manipulation, or advice
>>from the psychic friends network. To some it's based on the sound of a
>>name, like "ray-gun" or "Busch". And to some it's based on the power
>>of suggestion, gullibility, or vulnerability to carefully devised
>>propoganda campaigns.
>
>Sort of like your blind refusal to consider "the other side" and the
>discarding of any testimony to that end, as "propaganda"?

Testimony is fine as long as it's supported by facts. None of your offered "testimony" has ever been supported by facts. On the contrary, you defend your testimony based upon the -absense- of facts, which has no more validity than declaring the existence of God because I can't prove he -doesn't- exist. Show me some facts, Dave, and I'll consider your position.

>Really? Wow, I'm impressed.

No, you're concerned, hence the long diatribe that follows (which I will snip for brevity). You give yourself away because you have inadvertently conditioned yourself to give specific responses to specific stimuli, just like Pavlov's dog. You salivate whenever someone rings your bell. For example:

>>>I am probably the most straight-up honest person on here.
>>
>>
>>HAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!! I love early-morning humor!!!!

Translated: =-ding-=

>You find that funny? Then I suppose you have some evidence to disprove
>it?

>I am a right leaning conservative, and I accept that my viewpoint is
>polarized to some degree according to my political slant. But you
>still try to portray yourself as objective, which is the really funny
>part.

I -am- objective simply because logic is unbiased. It favors no political ideology, cannot be distorted by "core beliefs", and does not have different definitions for different people. I most certainly -do- have biases, but those biases are shaped by facts and logic, not the other way around as is the case with yourself.

>> I'm making progress but it would help if you could
>>open your mind and quit kicking and screaming whenever I state a fact
>>that threatens your faith-based perceptions.
>
>Your "facts" have already been demonstrated to be little more than
>extrapolated conclusions based loosely on factual information, but
>twisted to fit a particular political bias.

My facts can be verified by yourself whenever you are willing to
accept the possibility that reality doesn't give a rat's ass about
your "core beliefs".

Typical "Dave" response: someone says something he doesn't like and he
attacks the person.

>But to your last statement, I agree, I do sometimes "do my share", but
>it's usually reflexive and in response to an uncalled for personal
>attack aimed in my direction.

In case your memory has faded so soon, our recent arguments started
when you did exactly what you now deny: I made no "uncalled for
personal attack" in "your direction" yet you responded as if I had.

>If one want's to stay focused on the topics, I am more than happy to
>remain equally focused. But when the scope of the topic changes, I
>will respond in kind.

Save the rhretoric, Dave. You deviate from the topics so often that
it's impossible for even -you- to keep them all straight.

Hello all,
I want to signal 5 years of notes of Electronic Engineering
at the University of Rome Tor Vergata
proposed to you in the shape of questionnaire with answers,
I spend really much effort at that time and also now for the
publication on Internet,
I would be happy if these notes could be of aid to other persons,
you can find them at the link:

http://www.etantonio.it/EN/Universita/Universita.aspx

and for the electronics in particular:

http://www.etantonio.it/EN/Universita/3anno/ElettronicaApplicata/index.aspx
http://www.etantonio.it/EN/Universita/4anno/DispositiviElettronici/index.aspx

Again, I snipped nothing from the passage that I was excerpting to
make my point. I provided the link to the whole statute, but I only
copied paragraph 4, since that is the one which pertains to this whole
subject. For the sake of brevity and bandwidth, I chose not to copy
the WHOLE thing. That's why I also posted the link. If, as you are
implying, I was attempting subterfuge, would I have provided the link?

>So what were you saying about knowing the law?

I can at least READ it.

>has been calibrated as required under that part, there can be no legal
>challenge of its accuracy.

The reason why this part is included is precisely as a result of such
legal challenges. People still challenge this though, as you might be
surprised at how many police departments allow their speedo cal's to
expire. For this reason, most of the cops that I know do not use
moving speedo timing as a means to catch speeders. They'd much rather
"stake out" a particular road and time people as they pass by. The
degree of violation is such that even when required to give 10 MPH
(Paragraph 3 devices) they still nab a good deal of speeders.

> This is in direct contradiction to your
>claim that "The courts have a history of throwing out speed citations
>for small amounts, due to the potential for inaccuracies in both the
>car speedometer and the speed measuring devices."

There's no contradiction. The fact that part "D" was created was a
result of that history of court challenges. I never said that every
challenge wins or that the percentages of those challenges who won
today is any greater than they were 20 years ago. But that "history"
does exist.

Sigh.

Tweedle-dum goes down for the count with his foot firmly planted in
his mouth, and in comes you to take up the cause. Did you two sign
some sort of a pact?

Are you now attempting to "spin" this as well?

The law is clear. In certain circumstances, the state of Pa. requires that LEO's give AT LEAST a 5 MPH grace when running speed traps.

The greatest majority of speed traps are conducted with devices that fall within the guidelines of paragraphs 2 and 3, and this rule clearly applies

Are you through picking nits?

Quite a few according to many of the more recent FCC enforcement
actions. It would seem that the FCC is more likely to pop a licensed
ham for operating out of their assigned bands, than they are in
popping an unlicensed radio pirate.

If you are going to freeband, having a ham license may actually be
detrimental.

The reason freebanding is as rampant as it is is that the FCC is
simply not affecting all that many people. The chances of getting
popped are very slim, and they usually give you a warning first, which
gives you a chance to pull the plug.

Freebanding is a violation of federal radio law, but without effective
enforcement, that earns very little respect among those who pursue it.

Assuming freebanders have ham licenses. Most don't.

Any ham who works H.F. knows that conditions vary between the bands.
If DX is the name of the game, those who are rabid about it, will seek
out whatever avenues exist to achieve that goal.

From a propagation standpoint, there is little difference in
conditions between 10, 11 and 12 meters. But there are far more
operators on 11 meters at any given time, so there are more chances to
make that "rare" contact.

That doesn't make it right, but it does explain why.

>That doesn't make it right, but it does explain why.

You are clueless, Dave. 11 meters can be wide open when 10 and 12
meters are totally dead. That's the nature of the band and that part
of the spectrum. And that's one big reason why many hams operate
illegally on the CB.

I can make the same claim about your beliefs Frank, and around we go
again. There's a reason why people say that you shouldn't argue
religion and politics. There just isn't enough real "facts" to make a
definitive decision one way or another.

>>>>Politics is a matter of deciding which "side" makes the most sense to

Exactly. And when deciding something like the war on terror, the
outcome is an unknown, and therefore you have to have faith that the
method that our leader has chose stands the best chance of "winning".

> When it is known that some
>policies work and other policies don't, then adopting the policies
>that are known to work is not an exercise in faith, but rather a
>logical conclusion based upon past performance. And past performance
>is a perfectly valid reason to logically conclude that Bush is a poor
>choice for president.

Based on what facts? What specific policies has Bush performed badly
in as president?

The war against terror, while slow to progress, IS progressing.
Afghanistan has had free elections, Iraq has had free elections. Saudi
Arabia, has just decided to have free elections. There's hope for the
Palestinian issue. Libya has discontinued it's WMD programs, There is
a movement in Iran toward democracy. I'd say that the Bush doctrine
has had a positive effect on the region, despite how the nay-sayers
try to spin it.

To consider that as"performing badly" says much about your
perspective, and even more about your (lack of) objectivity.

> It's also consistent with your electronic

>irrational, emotional, or based on "core beliefs".

Human beings are driven by emotions. There is no logical reason for many of the things that we do. We are not "Vulcans" or "Androids" on Star Trek.

Is it logical to defy federal communications law by running power and freebanding on 11 meters? Is it logical to blow up buildings? Was logic running through Saddam Hussein's mind when he murdered thousands of his own people?

>>>To some it's

There is plenty of evidence to support my "side" of the issue. You have just as much chance of verifying it as you do the "facts" that you feel are irrefutable on you "side". You just refuse to consider it.

> On the contrary,
>you defend your testimony based upon the -absense- of facts, which has
>no more validity than declaring the existence of God because I can't
>prove he -doesn't- exist. Show me some facts, Dave, and I'll consider

You don't believe what I presented to you was based on fact, therefore you discarded it. It's ironic that you trash my evidence as propaganda, while your sources, which have equal credibility, are considered as fact. Can you verify your "facts" from any other source

other than websites?

>>>You have a 'tell', Dave.

Please, you've over your head now. You're trying to play my game on my
turf. You're way out of your league. I've been pushing Twisty's
buttons for years now just for fun, (Think: "federal criminal") and
now it looks like I've managed (inadvertently at first) to push a few
of yours. You still haven't recovered from your P.E.S.T..

That's true in theory, but as evidenced by your becoming unglued since the election, is evidence that there is a lot of irrational emotion driving your continued attempts to "educate" me on what you perceive as "wrong".

> I most certainly
>-do- have biases, but those biases are shaped by facts and logic, not
>the other way around as is the case with yourself.

There are none so blind as those who refuse to see.....

At least you're honest enough to admit that you do have biases. But as you just stated before, logic is unbiased and impartially objective. So you need to resolve the difference between what you feel are biases and how it might affect your ability to remain truly impartial and objective.

>>> I'm making progress but it would help if you could
>>>open your mind and quit kicking and screaming whenever I state a fact
>>>that threatens your faith-based perceptions.
>>
>>Your "facts" have already been demonstrated to be little more than

>
>
>My facts can be verified by yourself whenever you are willing to
>accept the possibility that reality doesn't give a rat's ass about
>your "core beliefs".

History is full of cases which support my ideology. History has a habit of repeating itself. But just like you discard my using historical failure statistics to help shorten the troubleshooting process, you ignore the lessons of human history, and the primal emotions which drive people.

No, it's not that people are getting dumber, it's just that electronic
forums like the internet (And public two-way radio) allows people to
disregard the rules of common courtesy and decency when they interact
with people in a way that they would never do in a face-to-face
exchange.

Anonymity also plays a large role. Sociopathic people hold their peers
in contempt, and like to use them as "toys" in a big head game. They
feel safe because no one knows who they really are, and that just
enables this behavior.

I don't recommend any aftermarket performance mods. Too often they do
more harm than good. The exception to that is the final transistor mod
where they replace the original transistor with a stud mount MRF 455.
I accept that mod, not for performance enhancement, but because the
MRF 477 is no longer being made and if one needs to be replaced, this
mod may be the best alternative.

I checked the factory service manual last night. They recommend
setting both the driver and final bias to 50 mA. That seems a bit
high, as the driver stages in many other radios are set around 40 mA.

My 2510 is set to factory specs and I've never added any "mods" to it,
and it doesn't oscillate.

Thats why they moved the capacitors to the bottom of the radio, more room to spread the coils.

I haven't found any mods on this yet. I was going to to that Schottky diode mod
for the receive. Not sure if it will improve that much for a base use unit, as
opposed to mobile.

I need a DMM that measures current. any recommendations on one that is good, without breaking the bank? The Flukes run abour $150 on ebay. I didn't want to spend that much.

Dave,

I do not have a RF VTVM or AF VTVM for the slignment. I do have a Tek 2235 scope and freq counter. I am ordering a DMM. My friend told me instead of the VTVM, use a DMM with a scope probe. That should work for critical voltages. If not critical, I can use a scope. Does that sound right?

That would be great, except for the problem that you have no idea what
my "core beliefs" are. And there are plenty of facts regarding
religion and politics -- some people (such as yourself) tend to ignore
the facts in favor of their "core beliefs".

That's easy -- the terrorists. They will always win because the "war
on terrorism" is a war on an abstract concept. People like you are
suckers for stuff like that.

>> When it is known that some
>>policies work and other policies don't, then adopting the policies

>
>Based on what facts? What specific policies has Bush performed badly
>in as president?

I provided a long list of facts about Bush that you disregarded as
"irrelevant" simply because you ignore the same logic you now invoke.

>The war against terror, while slow to progress, IS progressing.
>Afghanistan has had free elections,

Bullshit. Afghanistan had elections but they weren't "free", no more
than elections in the US are "free". The country is run by drug
producers and warlords, which isn't much different than the US -- the
differences being that US drug producers advertise during "liberal"

media broadcasts, and the warlords control congress through lobbyists.

Like Helen Keller said, you are "free to choose between Tweedle-Dum and Tweedle-Dee". That's not a free election. It's more like what happened under the communist regime in the USSR. In the US you get a couple candidates, but it doesn't matter which one you choose because neither one will accomplish anything significant. So you -do- have two choices when you vote: vote for the status quo or don't vote at all.

> Iraq has had free elections.

Bullshit. Iraq had elections but they weren't "free". The election was for people who are to write their constitution, few Iraqi's knew who was running (let alone what the elections were to determine), very few candidates publically admitted that they were running for the position because of the fear of assassination, and many Iraqi's didn't even vote for fear of terrorist attacks. That wasn't a "free election" in any sense of the word -- it was a sham. In fact, Bush declared the election a success -before- it was held because, as he said, Iraqi's "want to vote", and to him that was enough to declare the election a success. But by that logic, every election in the USSR was a success simply because the people "wanted to vote".

> Saudi
>Arabia, has just decided to have free elections.

They held elections but they weren't "free". Women still don't have the right to vote, and the candidates were severely limited. It was more a show of effort to silence criticism than a true election.

> There's hope for the
>Palestinian issue.

Never gonna happen. Israel will always hate the Palistinians because they are on Palestinian land and the Palestinians won't ever let them forget it.

> Libya has discontinued it's WMD programs,

Sure, and so has the US.

> There is
>a movement in Iran toward democracy.

HAHAHAHAHAHA!!!!! Do you get your information from comic books, Dave? Iranians are very nationalistic. While some may have a fascination with Western culture, there is no way in hell that they are ever going to accept the ideologies of the US because they consider the American Experiment to be a failure.

> I'd say that the Bush doctrine
>has had a positive effect on the region, despite how the nay-sayers
>try to spin it.

By "nay-sayers" do you mean the people of the region? Because that's what they think, regardless of what you have been told by the Bush propoganda machine.

>To consider that as"performing badly" says much about your
>perspective, and even more about your (lack of) objectivity.

The argument was in context with Bush's track record of business administration; which, by all accounts, shows that he is a pathetic loser. It was -your- argument that past experience is an indicator of the cause of problems. I simply applied your own priciple to politics. If you don't like the conclusion then that's -your- problem because it's -your- logic.

>> It's also consistent with your electronic

>
>The election must have affected you far more than you realize.

I'm not the one who has aligned myself with a criminal president, defending him with every logical fallacy at my disposal, trying to spin any criticism against him to look like a liberal whine-fest. Bush won the election -- so why are you still defending him?

And BTW, I didn't get spun -- you still haven't addressed the fact that you defend yourself against political criticism by disregarding the same logic that you use to support your ideological beliefs and electronic troubleshooting techniques. Instead you spin the topic by accusing -me- of spinning the topic. What a hypocrite.

>>> but there is little about

>
>Human beings are driven by emotions. There is no logical reason for
>many of the things that we do. We are not "Vulcans" or "Androids" on
>Star Trek.

Just because we are human isn't an excuse to ignore logic. I should
remind you that Star Trek is fiction, just like Sherlock Holmes.

>Is it logical to defy federal communications law by running power and
>freebanding on 11 meters? Is it logical to blow up buildings? Was
>logic running through Saddam Hussein's mind when he murdered thousands
>of his own people?

Was it logical to hand biological weapons to Saddam? To buy the
freedom of American hostages by handing weapons to Iran? To tuck tail
and run when we got blown up in Beirut? The "war on terror" started a
long time ago, Dave, and since then the US has been busy arming the
enemy with the very same weapons we now claim are a threat. Is that
logical? If it isn't, then take a good hard look at who is making that
argument -- Bush & Co. If it -is- logical then maybe you should
explain your logic to the rest of us because I don't think that any
reasonable person would agree with you.

>>>>To some it's

I never refuse to consider facts. But you haven't provided any. So
where are -your- facts, Dave?

>> On the contrary,
>>you defend your testimony based upon the -absense- of facts, which has

>>no more validity than declaring the existence of God because I can't
>>prove he -doesn't- exist. Show me some facts, Dave, and I'll consider
>>your position.
>
>You don't believe what I presented to you was based on fact, therefore
>you discarded it.

You presented arguments that you -claim- were "based on fact" but you
never provided the facts. All you provided was a website with a forged
document.

> It's ironic that you trash my evidence as
>propaganda, while your sources, which have equal credibility, are
>considered as fact. Can you verify your "facts" from any other source
>other than websites?

You mean like the fact that Blackwell ignored a subpoena to testify to
the process and procedure of the Ohio election process? Or the fact
that Kerry's service records clearly state that his character of
service was nothing less than honorable? Or the fact that every
serviceman who served from the end of WWII until 1979 was obligated
for 7 years of inactive reserve -after- active duty? How about the
fact that Bush was convicted of a criminal offense?

You don't like the facts. I don't either. But at least I can accept
them as facts.

>>>>You have a 'tell', Dave.

>as "wrong".

My emotional reactions have nothing to do with the validity of my
arguments, none of which you can logically dispute (or else you would
have done so by now). All you can do, and all you have done, is call
me names, recite your "core beliefs", and hope that someone falls for
your 'truth by repitition' fallacy.

>> I most certainly
>>-do- have biases, but those biases are shaped by facts and logic, not
>>the other way around as is the case with yourself.
>
>There are none so blind as those who refuse to see.........

Then open your eyes, Dave. The facts have been handed to you on a
silver platter, yet you refuse to even consider them because, by your
-own- admission, they conflict with your "core beliefs". That's called
"blind obedience", and it's not even the characteristic of a good
soldier let alone a spokesperson for a political ideology.

>At least you're honest enough to admit that you do have biases. But as
>you just stated before, logic is unbiased and impartially objective.
>So you need to resolve the difference between what you feel are biases
>and how it might affect your ability to remain truly impartial and
>objective.

Where have I not been impartial and objective? I used to support Bush,
yet when I learned the facts I withdrew my support. And believe me, it
wasn't easy for me to dismiss my previous position and accept the fact
that Twisty was right all along. Now how is that -not- impartial and
objective?

>>>> I'm making progress but it would help if you could

>History is full of cases which support my ideology.

History is full of cases that support Hitler's ideology. What's your
point?

> History has a
>habit of repeating itself. But just like you discard my using
>historical failure statistics to help shorten the troubleshooting
>process, you ignore the lessons of human history, and the primal
>emotions which drive people.

Who said anything about history? I said you can't address the facts.
You can't. You have been spoon-fed the facts and you refuse to even
admit they exist, let alone consider their importance. And if you
think that human "primal instinct" is what drives the political
process then maybe you should explain what it means to be civilized. I
don't think that's beyond your capability -- assuming, of course, that
you are willing to admit certain facts.......

You posted at 4:07 in a thread:

>I wonder how many freebanders have ham licenses...

Your response to the question was:

"Quite a few according to many of the more recent FCC enforcement actions.
It would seem that the FCC is more likely to pop a licensed ham for
operating out of their assigned bands, than they are in popping an
unlicensed radio pirate."

4 minutes later you post again, same thread, different post:

>Those with any sense do not do "free banding" since it is
> limited by comparison to legal Ham bands privileges.....

"Assuming freebanders have ham licenses. Most don't.

Any ham who works H.F. knows that conditions vary between the bands. If DX
is the name of the game, those who are rabid about it, will seek out
whatever avenues exist to achieve that goal.

From a propagation standpoint, there is little difference in
conditions between 10, 11 and 12 meters. But there are far more
operators on 11 meters at any given time, so there are more chances to make
that "rare" contact.

That doesn't make it right, but it does explain why."

Now you asked Dave, please don't attack the messenger.

I've watched the speed thread and contrary to what you
interpret, there is no written or "Unwritten" (to which no-one
could prove... Because it's unwritten) law saying a Cop can't
write you a ticket for going 56 in a 55 MPH zone.
Will the cop win in court? Probably, not enough people

know that they can ask for certificate of calibration on his
gun or clocking device or that they should go and get "their" own speedo
calibrated.
By the way, Vascar is illegal in California, it's considered
entrapment, so there's another defense.

Dave, you type this above, then type this 4 minutes later.
Make up your mind:

Assuming freebanders have ham licenses. Most don't.

Any ham who works H.F. knows that conditions vary between the bands.
If DX is the name of the game, those who are rabid about it, will seek
out whatever avenues exist to achieve that goal.

From a propagation standpoint, there is little difference in
conditions between 10, 11 and 12 meters. But there are far more
operators on 11 meters at any given time, so there are more chances to
make that "rare" contact.

That doesn't make it right, but it does explain why.

>Post your source, Dave.

Common sense, and statistical probability. At the time CB was at it's
biggest peak, the number of licensed CB'ers outnumbered hams by nearly
10:1. With that many CB'ers it stands to reason that the greatest
source of freeband activity comes from CB.

>>Any ham who works H.F. knows that conditions vary between the bands.

>meters are totally dead. That's the nature of the band and that part
>of the spectrum. And that's one big reason why many hams operate
>illegally on the CB.

Pure B.S. Frank. There is no way that 11 meters can be "wide open" and 10 meters not be equally open. They're only 1 Mhz apart, so propagation characteristics are virtually the same. Even if you try to use the MUF argument, then how would that explain 12 meters? Surely you aren't going to argue, just for the sake of arguing, that the conditions on 27.555 are all that much different than what's on 28.005?

What IS different though are the amount of operators present. The old; "If a tree fell in the woods and no one was there, did it really make a noise" analogy holds here. If the 10 meter band was wide open but no one was using it, were the conditions really different?

The plain truth is that 12 meters is a lightly used ham band. 10 meters is pretty much only active when the sunspot cycle is high, and people look there for DX. Otherwise hams tend to flock to 15 meters and lower to make their DX contacts. If a sporadic band opening happens on 10 meters, most would miss it. But with millions of CBers flooding the legal channels, you have an instant beacon that tells when the band is opening. Just listen to the noise level rise.

Is your zeal to argue with me overriding the illogic of your position? Besides, I though you had a new job? Isn't it time you got to work?

Google pretty much answered that question. There WAS no posting
history by the person known as "elmer". That brings about two
possibilities:

1. He was a long term lurker who just happened to choose this moment
to introduce himself.

2. "Elmer" is a pseudonym for another person.

Considering the proliferation of name-calling sock puppets in the
recent past, what is the statistical probability that choice 1 is more
likely than choice 2.

You made the statement, now you provide the proof. When have I
deviated from the topic at hand, other than to defend against a

That's because in Pa, only the state police can be certified to use
RADAR. Local cops have to rely on other methods like VASCAR.

For current settings, I use a simple 15 year old Radio Shack VOM. It's
analog, but it's not that critical, and they (At least they used to
be) cheap, and available.

I also have a Textronix DMM that does current, but it's not as
portable.

A DMM is not necessarily more accurate than a scope, it's just more
precise. If you need to make a voltage reading that goes out 2 decimal
places, the DMM can indicate that (even if it might be beyond its

calibrated accuracy in some cases).

A scope is nice. The TEK 2235 works well. I have one of those and it's great for doing two tone and modulation tests. You can actually "peak" a radio with the scope by simply tuning for tallest amplitude of the waveform. Remember when looking at a scope that it measures in voltage. Twice the voltage equates to about 4 times the power in watts. So when you set for 100% modulation, I usually set the carrier wave for two divisions in amplitude, and then 100% modulation will increase that to 4 divisions.

A scope is also high impedance so it should not affect circuits all that much. A scope is basically a voltmeter that displays in the time domain, so anything you can measure with a DMM can be measured with a scope.

I also prefer having a spectrum analyzer (I have an HP 8558). It is real nice for checking spurious emissions and oscillations. Many times aligning a radio by meter alone will not give the cleanest output. I usually align with the analyzer for cleanest output.

The really sad part is that you don't see that you do this. That is
why it is pointless to argue with you. You feel that your "sources"
are completely factual, while mine are "propaganda". What you call
"facts" are nothing more that reports written by other people. The
credibility and agenda of those people call into question the validity
of your "facts". You can't verify any of it. You are trusting that
other people are telling you the truth. Who says that they are?

The fact that Bush was once busted for a minor traffic offense is a
diversion. Ted Kennedy was responsible for the death of Mary Jo
Kopechne, and he's still in office, so the point is irrelevant.

You choose to believe what you want to believe. The national Enquirer
isn't losing subscriptions any time soon either.

The Christian religion defines God as omnipotent, a "supreme being"
without limits. Yet according -your- explanation, the mere fact that
God is defined as omnipotent necessarily contradicts itself -- both
cannot be true because if God is 'undefinable' then it is impossible
to define God as -anything-, let alone 'omnipotent'.

Doyle's argument does not set any practical limitations. On the
contrary, it's an argument that establishes the literal possibility of
the impractical.

>what I mean by statistical probability.

Doyle's argument is a proof -against- statistical probability. The
mere fact that such things are possible, regardless of statistical
improbability, puts them on the list of possibilities that must be
excluded before resolving to another statistical improbability.

Time is the passage of events. Change is the effect of an event. So as
long as time continues, changes will occur. And time will continue as

long as things continue to change. So like I said before, unless the
Universe locks up and freezes solid, change is both continuous and
infinite.

Considering that most electrolytics have a tolerance of -20 to +80%
(or something similar, but usually quite large), maybe you need to
either find a magnifying glass or a different cap tester.

Caps don't "shift tolerance". Either they are within the rated
tolerance or not. If they are outside the tolerance then they are bad,
but I have yet to see a mylar that was outside it's rated tolerance
(unless it was wide open). Since you have run into the problem several
times and you keep your bad parts, how about sending me one? I would
like to see it for myself, and would also like to know what brand so I
can avoid them in the future. I'll even pay shipping.

>components had failed?

It can happen when the low level audio isn't low level anymore, for
whatever reason. It can also happen when there is an oscillation in
the circuit, or in a previous circuit prior to amplification. It can
also happen if a filter fails, allowing an unwanted AC to be amplified
into the stage. There are many more possibilities. List?

>In your example, that is a blatant case of poor design. If the circuit
>is routinely expected to see the conditions you've described then the

>>>
>>>
>>>>Now..... since you want to invoke semantics, I'll state this more
>>>>clearly for you: A pure DC current has an AC component with a value of
>>>>zero, and a pure AC current has a DC component with a value of zero.
>>>>
>>>>Feel better?
>>>
>>>I should ask you if that tap dance felt good. What good is stating
>>>that D.C. has an A.C. component of zero? It's the same thing as saying
>>>there is no A.C. on a pure D.C. current.
>>
>>
>>Yes it is. What's your point?
>>
>>
>>>It's misleading to state that one type of current has another type of

>>>current as well, and then back pedal and state that that component is
>>>zero. Then why bring it up at all?
>>
>>
>>Because you can't comprehend the concept as it relates to the topic,
>>which is the AC resistance of a capacitor.
>
>Of course capacitors have A.C. resistance. That's what allows them to
>act as coupling caps in audio circuits. But that characteristic is not
>of primary importance in a power supply filter, as the amount of
>ripple neither exceeds the voltage rating of the cap, nor does it
>reverse the polarity of it, assuming good engineering practice.

The current reverses polarity. Alternating Current. Are you going to
play dumb with this one, too?

>>>I know the basics. 120 hz is the fundamental frequency of a full wave
>>>rectification, not a harmonic of it.
>>
>>
>>Wrong. 120Hz is a harmonic of the 60Hz source after being affected by
>>a non-linear function. And for the sake of mentioning it, rectified AC
>>contains a multitude of harmonics of the source -- it is not a 120Hz
>>"fundamental" frequency. If you have a spectrum analyzer you can prove
>>this to yourself. Begin with a sine of any frequency, put it through a
>>full-wave rectifier, then look at the spurs.
>
>Been there, done that. 120 hz is the largest component. There are 60
>Hz harmonics spacing out from there. There is also a 60 hz component,
>but it is at a much smaller amplitude than the 120 hz signal.

The fundamental is -not- the largest spur. By definition, it is the
lowest harmonic; i.e, the 1st harmonic. That's a basic electronic
priciple, Dave. You didn't learn -that- in tech school, either? And if
you didn't, why haven't you learned it in the 35 years hence?

>> You will no doubt see a
>>large spike at the 2nd harmonic of the source, but because the
>>rectifiers in the bridge can never be perfectly matched you will also
>>see a spur at the FUNDAMENTAL! If the 120Hz after rectification -was-
>>a fundamental then it would NOT have harmonics -below- it!
>
>You can't have a negative harmonic. Yes there will be some leak
>through of the primary 60 hz frequency. But the fact that the 120 Hz
>frequency is the strongest, means that it is now the fundamental,

Leakage? LOL!

>>>>Twice asserted. Again, as you say, "apology accepted".
>>>
>>>For what? Providing a reason why the term ripple has been replaced by
>>>a newer term and establishing the parameters by which that term came

>>>to be, and illustrated why those parameters are irrelevant for the
>>>linear supplies we are currently discussing?
>>
>>
>>No, for twice asserting the fact that terminology changes, a fact that
>>you refuse to admit when addressing the term 'Alternating Current'. So
>>again, I accept your apology.
>
>Alternating current behaves the same today as it did 50 years ago.

So do you, Dave.

>>>>A capacitor -does- store a charge, and the amount of that charge -is-
>>>>a function of it's capacitance. But it's ability to -accept- and
>>>>-deliver- that charge leaves a gaping hole in your explanation. As I
>>>>said before, the value in capacitance is -only one- factor of its AC
>>>>resistance -- i.e, its ability to "filter" AC from a DC current.
>>>
>>>It "filters" by charging and discharging, against the ripple.
>>
>>
>>See below.
>>
>>
>>>>And for a better perspective, dust off your book on basic electronics
>>>>and look up the page that covers simple LC filters -- low-pass and
>>>>high-pass. Notice that a high-pass filter has the cap in series with
>>>>the source, while the cap in the low-pass filter is an AC -shunt-. Now
>>>>you have already admitted that a power supply cap is nothing more than
>>>>a component of a filter, and I think it's safe to conclude that you
>>>>meant a low-pass filter (since the intended output is DC).
>>>
>>>True.
>>>
>>>> Now unless
>>>>you intend to argue that the capacitor in an LC low-pass filter does
>>>>-not- shunt AC to ground, you have once again shown that you don't
>>>>have a firm grasp of the basics.
>>>
>>>The problem is that while what you say about low pass filters is 100%
>>>true, when you start talking about power supplies, the job of the
>>>filter caps becomes more like small temporary batteries than filter
>>>components. I can turn off my 30 amp supply, and it will continue to
>>>supply 12V for about 30 seconds (unloaded) before the caps finally
>>>bleed off.
>>
>>
>>Well, that's in total contradiction to your explanation of the
>>operation of your battery charger when you claimed that the battery
>>acts as the filter capacitor. So which is it, Dave -- is a capacitor a
>>capacitor or a battery?

>
>I said "like a small temporary battery" Place a battery across an
>unfiltered power supply and it will also act like (Oh my god!) a
>battery and filter as well. Is the battery also "shunting A.C. to
>ground"?

Yep. Batteries have an AC resistance just like capacitors. But -you-
made the distinction because you don't understand the basics.

>>>>You're stalling with semanitcs, but even -then- you are wrong. Say
>>>>your PS cap is charged to a DC voltage. When the power supply pulls
>>>>the ripple to it's peak then current is flowing -out- of the cap. When
>>>>the ripple bottoms out then current is flowing -into- the cap.
>>>
>>>You've got that backwards. When ripple peaks, the cap charges. When
>>>the ripple ebbs, the cap discharges.
>>
>>
>>You are right, but it's not backwards at all.....
>>
>>When the ripple peaks the cap -does- charge because electrons are
>>flowing -out- of the cap (assuming we are both talking about a
>>positive supply and the negative end of the cap is grounded). When the
>>ripple bottoms out the cap is discharging, meaning that the current is
>>flowing in the opposite direction; i.e, electrons are moving -into-
>>the positive plate.
>
>Hole theory versus electron theory again.

No, it's called "charging" and "discharging", which is exactly as you
explained it before. Current (regardless of your definition of current
as long as it's the same for both) flows one way while charging and
the other way while discharging. The current alternates. Alternating
Current. AC. Simple concept, and you are an idiot if you can't figure
out what it means after going to tech school, 35 years in the biz, and
having it spoon-fed to you no less than eight times by none other than
myself.

>>The result is that the current does indeed alternate. The capacitor
>>passes an Alternating Current; i.e, AC. Is any of this sinking in yet?
>
>Sure. You and I just have a different way of describing the same
>thing.

Seems I said that myself a few posts ago..... except I added that your
explanation is devoid of an understanding of the basics. I still hold
that opinion. But your grades are improving so all is not lost.

>>>>Oh, gee, I don't know..... How about:
>>>>
>>>>A battery & a resistor;
>>>>Resistors in series and parallel;

>>>>and mathematical descriptions of how electronic components and
>>>>circuits work in "real life". If you didn't learn these fundamental
>>>>concepts because electronic theory "bores you to tears" then you
>>>>probably shouldn't be discussing the subject with an EE who -did-
>>>>learn the basics (and in much more depth than they are covered in any
>>>>"tech school").
>>>
>>>I am an engineer Frank.
>>

>>
>>Not an electrical engineer. Are you a train engineer? Sanitation
>>engineer? Or do you just work on a road crew? The latter might explain
>>why you think a "short break" from work lasts over an hour.
>
>I wear many hats these days. Software quality engineer, system
>integration engineer, product support engineer, Field engineer,
>applications engineer.

But not an EE. It's obvious that you were trying to imply you -are- an
EE in your response to the fact that I am an EE. And I doubt that you
have any education beyond your tech school.

>I take many small breaks Frank. I may respond to one message in one
>hour, and another an hour or so later. While I'm waiting for tests to
>complete, I often surf the net while I keep tabs on UUT. Nothing
>strange there.

.....uh huh. Sure.

>>> Tech school was my first taste of formal
>>>education, which I attended starting when I was 15 years old. Theory
>>>was a part of the curriculum, but it was closely accompanied by lab
>>>experiments where we could "put the theory to work" in actual
>>>practical circuits.
>>
>>
>>So you built a color organ in a high-school industrial arts class.
>>Whoop-dee-doo, so have lots of other people.
>
>No, this was not high school industrial arts class. This was a three
>year electronics program. I built far more than a "color organ". I
>built AM and shortwave radios, and my first 2 tube grounded grid "CB"
>amplifier. There was only so many parts I could scrounge though.

So what's the name of that tech school, Dave?

>>Alright, since you want to compare resumes:
>>
>>I started with a dry-cell and a spool of wire when I was 7yo.
>
>I was 9.
>
>>
>>I got an old Heathkit 19-in-1 kit when I was 9.
>
>I was 10, and it was a Radio Shack 100-1 project kit.
>
>>I was mentored in electronics by Stan the Speaker Man (here in
>>Spokane) until I was 14, when he died and I started my own TV/radio
>>repair business.
>

>I was 14 when I started tuning and repairing CB radios for the locals.
>By the time I was 16, I was earning enough to buy my first car and pay
>for gas and insurance.
>
>>After high-school I went into the USMC where I was trained as a Ground
>>Radio Repairman (2841) at 29 Palms (MCCES). I worked on anything from
>>the diminutive PRC-68 (VHF walkie-talkie) to the MRC-110 (1kW mobile
>>HF), as well as wired comm systems (mostly TA-312's), power supplies
>>(including the one in Ollie North's office), and just about anything
>>else that conducted electricity.
>
>I chose to further my education and started working full time as a
>quality technician and then later a production troubleshooter
>
>
>>After the USMC I worked in two different commercial radio shops until
>>I went back to college (I got some credits from UNC while in Lejeune).
>
>I was always enticed by commercial radio. My tech school had a radio
>station (WVVE - We're the Voice of Vocational Education) at 91.3 Mhz.

>>manufacturers (probably even one that's in your own computer).
>>
>>Worked as a quality control engineer at HP for a couple years.
>
>I've worked at a few different places as both technicians and later as
>an engineer. I've done everything from product design to support to
>test to quality. I've worked with RF, analog and digital video,
>digital audio, software and many other things I've forgotten about.
>Sorry if I don't reveal where I'm working now, but frankly (no pun

>intended) it's no one's business.
>
>>
>>Worked as a BE at a local radio station until last fall.
>>
>>All the while I have been in the hobby of CB radio, including being a
>>part of the original Jacksonville keydowns in the early 80's while I
>>was stationed at Lejeune.
>
>Yet you decry illegal operation now? Shame Shame. ;-) Now I know why
>you've never called my a hypocrite for basically doing the same thing.
>See, we are more alike that you thought. And we do change when we
>grow up Frank.

Some of us more than others.

>>>No kidding.
>>>
>>>>Second, the power transformer is a
>>>>source impedance with an inductive reactance that changes with the
>>>>load. Third, the load can be (and frequently is) reactive to some
>>>>extent.
>>>
>>> Not if the load is purely resistive.
>>
>>
>>If it isn't reactive then it's purely resistive, right? Duh...!!!
>
>That's what the Smith Chart would show.....
>
>
>>>A power supply is not an oscillator (Well, it's not supposed to be), a
>>>doubly balanced mixer, a PLL circuit, or a transmitter. It is a simple
>>>A.C. to D.C. converter. Why try to make it more complicated than it
>>>truly is?
>>
>>
>>Which is -exactly- the point that I'm trying to get through to -you-!
>>You don't need to play with RC time constants because such an analysis
>>is compounded by more issues than are in your vocabulary. OTOH, the
>>function of the cap is better described as a function of it's AC
>>resistance, a much simpler and broader concept that you seem bound and
>>determined to debunk!
>
>If you say so. I find just the opposite to be true.

Oh, that's right -- you don't know the difference between a battery
and a capacitor.

>>And BTW, the oscillator, transmitter, and double-balanced mixer
>>circuits are much simpler than a power supply.

>
>Not to me. There is nothing simpler than a simple linear power supply.
>I guess that's because it's the first thing I ever studied in any
>great detail.

For some strange reason I can believe that you find a power supply to
be a simpler circuit than a flashlight -- you haven't even mastered
the fundamentals of a lightbulb!

>>>Isn't that what I just said?
>>
>>
>>No. Let's try this again, and this time wear your glasses: "The RC
>>curve.... assumes that both the resistance and capacitance are
>>constants." Now, Mr. Engineer, what part of that don't you understand?
>>
>>
>>>> And because it is not a constant
>>>>the RC curve does -not- follow the same path that it would if the
>>>>capacitance -was- a constant. And BTW, the RC curve becomes a straight
>>>>line when the current is constant because the charge rate of the cap
>>>>is a fuction of current, not voltage. This is yet another example of
>>>>your inability to distinguish current and voltage.
>>>
>>>Are you trying to say that an R/C time constant is a straight line? I
>>>sure hope not.
>>
>>
>>Put on your reading glasses again, Dave. I said the curve was straight
>
>How can a curve be straight Frank? You're talking in riddles. I sure
>hope you never take up teaching. You have a tough time explaining what
>you're trying to say.

Because it's called a curve even if it's straight, and if you knew
anything about electronics -or- mathematics you would know that much.
Either you are really ignorant or you are lying. Which is it, Dave?

>>>Perhaps it is not me that needs a refresher course in electronic
>>>theory. It would seem that real life experience has paralleled my
>>>understanding of the hows and whys and has contradicted what you have
>>>said. In other words, I have seen nothing in my 35+ years of playing
>>>with and repairing radios that goes along with your observations. But
>>>I have seen many that have agreed with mine. Now, unless you want to
>>>make the case that the laws of physics works differently on the left
>>>coast, I would tend to question your depth of "knowledge".
>>
>>
>>Everything I have said can be easily verified by anyone who can read.
>>You can't read, which explains your pathetic understanding of basic
>>electronics.

>
>I can read just fine. But you seem to have trouble 'splainin your
>self.
>
>You are full of straight curves, and sing of A.C. components on D.C.
>voltages which are present, but equal zero.
>
>In other words, a lot of doubletalk.

It sounds a lot like you are adopting Bush's campaign tactics to make
your arguments; i.e, dumbing down an issue to nothing but a buzzword
or catch-phrase. At the very least you could -try- to be more mature
than Bush by addressing the issues instead of trying to spin them with
simplistic jargon. Or do you really prefer the ignorant approach?

>>>> Maybe you think you can leaf
>>>>through a few textbooks, speed-read a few concepts, paraphrase them
>>>>and try to pass them off as if they were integrated into your
>>>>education.
>>>
>>>That's what it seems you have been doing. Only you forgot to read the
>>>part about caps drying out.
>>
>>
>>Where's that book, Dave?
>
>If I tell you, will you read it, or while you toss it aside as "right
>wing propaganda"?

Only if it -is- right-wing propoganda. But what kind of technical
publication can be considered to be right-wing propoganda?

>>>> Well, you can't. I've been in the field long enough to
>>>>recognize that scam and it doesn't work. It didn't work for Skippy, it
>>>>didn't work for Toll, it didn't work for Eitner and it won't work for
>>>>you. But please don't stop trying because I find it very entertaining.
>>>
>>>Maybe you are the one who doesn't know what you are talking about
>>>Frank. You've gotten into "discussions" with other people before and
>>>tried to play that game. In some of those cases the stuff you brought
>>>up was a bit off-the-wall, and contrary to accepted practices. The
>>>whole "coax length" debates come to mind.
>>
>>
>>You mean when CLP falsely claimed he had a copy of the book I used for
>>a reference? Sure, why not. You have already pushed this discussion
>>well beyond the boundries of the original topic, so why don't we
>>revisit the coax length debate? But just know that it's not going to
>>detract from the fact that your electronics education is woefully
>>lacking, your claimed experience is probably 'overinflated', and your
>>troubleshooting skills have no logical or scientific methodology. So

>>yeah, let's do the coax thing again. Just what was it I said that you
>>consider to be "a bit off-the-wall"?
>
>I don't remember exactly, and I don't care enough to revisit it.

Gee, what a suprise.

> But
>suffice to say that you were the first person to offer up some very
>"unique" explanations for some givens that many hams take for granted.

For example?

>>>>>That's why I chose it. Redundant would fit too.
>>>>
>>>>
>>>>I'll give you another opportunity to look up those words.
>>>
>>>Why? I am fully aware of the definitions of both.
>>
>>
>>I don't think so, Dave.
>>
>Sigh..... Ok you asked for it.....

>reiï¿½duniï¿½dant (P) Pronunciation Key (r-dndnt)
>adj.
>Exceeding what is necessary or natural; superfluous.
>Needlessly wordy or repetitive in expression: a student paper filled
>with redundant phrases.
>Of or relating to linguistic redundancy.
>Chiefly British. Dismissed or laid off from work, as for being no
>longer needed.
>Electronics. Of or involving redundancy in electronic equipment.
>Of or involving redundancy in the transmission of messages.
>
>
>Gee Frank, redundant is synonymous with superfluous.
>
>Are you now going to pull another Twisty and attack the accuracy or
>completeness of my dictionary?

Why? You have proven that you -can- address facts. So why can't you
address facts that conflict with your "core beliefs"?

>>>>Another flip-flop. Make up your mind -- is it easy or not?
>>>

>>>Depends on the equipment and the application.
>>
>>
>>That's a cop out.
>>
>>
>>>Not easy does not mean impossible, or even improbable. It is easy to
>>>eliminate the majority of common practical causes. In most cases, the
>>>cause will be found during this process. In those rare cases where the
>>>cause is not part of the statistically probable causes, a little more
>>>investigative time may be involved. Troubleshooting is all about
>>>knowing the statistics. If you get in a piece of equipment that shows
>>>a common failure that you've seen before, would it make sense to check
>>>unrelated parts, or would it make more sense to go where the previous
>>>faults have been found?
>>
>>
>>You said, "it's easy to eliminate practically every potential cause".
>>When I said that it's not always easy you replied with, "No, but it is
>>doable." Now you say it "depends" and obfuscate your flip-flop by
>>getting all wordy and begging for vindication with a loaded question.
>
>The object is to not eliminate *all* possibilities, but to eliminate
>the most probable ones. You may disagree, but if there was some way to
>demonstrate, I'd bet you $100 that I can find and correct a typical CB
>flaw before you're done studying the schematic.

Maybe you should have read Doyle's argument before you quoted it.
Regardless, you still can't address the fact that you flip-flopped on
the issue. Very Kerry-esque of you.

>>Despite your wishy-washy position, I'll answer your question by saying
>>this: Troubleshooting by playing the odds (statistics) is for people
>>who do not understand the purpose and function of the circuit and all
>>it's components, because if you -do- know how they work then there is
>>no need to make guesses.
>
>That right there proves that you have not the faintest clue about what
>I'm talking about. It's not "guessing", it's looking for the most
>likely place to start looking. The process to be able to make these
>intelligent "guesses", is based on years on analytical analysis and
>repetition.

Uh-huh..... How about applying that logic to your political arguments?

>> As a perfect example, read the early posts in
>>this thread again. You will note that both Lance and myself asked to
>>see a schematic. OTOH, you blurted out that the cause of the problem
>>is "almost always" a capacitor. That's not troubleshooting. That's
>>troubleguessing.
>

>Frank, as has been becoming an increasing staple for you, you totally
>misunderstood and misread the concept.
>
>I offered a sample of my experience which covered similar problems in
>other radios as a place to start looking. Having the schematic adds
>almost nothing, without the ability to see the radios and make
>measurements.

Yet measurements mean nothing without a functional representation of
the circuit, which is what is provided by the schematic.

> Your suggestions were also little more than guesses as
>you knew nothing more about the radio than I did. The difference is
>that you looked at the schematic and offered a potential problem based
>on generic theory and what you thought to be true based on your
>experience. I offered the same based on specific situations which had
>similar symptoms

You assumed. I didn't. That's what it boils down to.

>Now we never heard back fro the original poster as to whether he found
>the problem or not. So for you to condemn my suggestion as wrong
>before even knowing what was right, smacks of pompous arrogance.

It's pompus arrogance only if you made an assumption about the cause
of the problem. Even if you were right it's nothing more than playing
the odds.

>>>Never seen it happen. A breakdown of transformer insulation will
>>>usually result in a short and a blown fuse.
>>
>>
>>A shorted winding usually results in an overheated transformer because
>>most people defeat the purpose of the fuse and replace blown fuses
>>with bigger ones so the equipment will keep working.
>
>That's their problem.

It's -your- problem if you don't realize that it's a common occurance,
which, apparently, you don't.

>> But the isolation
>>I was referring to was between the primary and secondary windings.
>>Many cheap power transformers have poor isolation between the
>>windings, and some have none at all. Primary shorts to the secondary
>>and you get lots of unwanted EMF on the secondary. You -have- worked
>>on Pyramid supplies, haven't you?
>
>Yep, and I've never seen what you've described. The one I currently
>have once belonged to a local CB'er who tried to jump start his car
>with it, and he ended up taking out all the series pass regulators as
>well as the LM723.
>

>>>>Actually, it was a design flaw. The diode was supposed to be thermally
>>>>connected to the heatsink, but was mounted such that the thermal link
>>>>was nothing more than a blob of heatsink grease. The grease dried out
>>>>and the redidue became a very good insulator. Regardless, my point was
>>>>that the failure is not always intrinsic to the circuit or device;
>>>>many times the problem is caused by outside influences, such as
>>>>improper operation or maintenance, poor design, manufacturing flaws,
>>>>etc. And many of those faults are not always evident; i.e, they don't
>>>>leave evidence of the cause of the failure. The fact is that there was
>>>>no evidence of the cause of the failure in the Peavey. I learned of
>>>>the cause after harassing Peavey tech support until they forked over
>>>>the info (I really think they try to keep faults like that a secret
>>>>because they make so much money on spare parts, but I suppose that's
>>>>just one aspect of modern business practices).
>>>
>>>So you finally found the source of the problem. You simply found
>>>another possibility to consider. It was nothing magical.
>>
>>
>>I never said it was.
>>
>>
>>> The next time
>>>you see an amp like that with the same problem, will you not then
>>>check that diode first? That's what I mean about experience and
>>>statistical probability.
>>
>>
>>I check the diode, but not first, and I don't assume that the diode is
>>the problem.
>
>But I'll bet (unless you really out there) that before you power up
>that amp after replacing the chain of audio transistors, that you'll
>check that diode just to be safe.

Actually, I replace it regardless of whether it's good or not. Like I
said before, the problem is not the diode but the design. If I can
prevent a failure then I will -- it's no different than a car company
making a recall because of a faulty component or design flaw.

>>Quite the contrary; the problem is usually a power
>>transistor that shorts.
>
>Are you willing to bet a set of transistors that that's the only
>problem?

Gambling is -your- troubleshooting technique, not mine.

>> And for the sake of anyone reading this for
>>info on the amp, I highly suggest replacing the MJ15024 and MJ15025
>>with those Korean-made transistors. When they go bad they blow open;

>>almost every other brand (including Motorola and Peavey in-house
>>stock) will short and blow the rest of the amp.
>
>A good tip. But do those Korean transistors match up equally in noise,
>gain and power?

Yes. But it's a 2000 watt amp -- do you really think anyone would
notice if there -was- any difference?

>>>You might have half a leg up on me in pure theory, but you are
>>>seriously lacking the proper mindset to be an effective
>>>troubleshooter, as you don't seem to grasp the analytical mindset
>>>that's required or the practical application of your theory.
>>

>>that the spec is a typo.
>
>Then conversely, for my manual to be wrong, then all of my other
>manuals would be wrong as well. What was that again about that single
>bullet?

Like I said several times before, I can scan the page for you.

>>>>Not like Sams which
>>>>got their info from reverse engineering.

>>>
>>>And you know this how?
>>
>>
>>Because that's how they made their manuals. You've been using them for
>>35 years and you didn't know that? TAB books did the same thing for a
>>while.
>
>I use both SAMS and factory manuals. SAMS claimed to used factory
>specifications for their alignment.

Apparently they didn't, not if the only authorized manual for the
radio has different specs. And you obviously don't have the factory
manual.

>>>Well, the issue becomes, one of our manuals is wrong.
>>>
>>>And once again Frank, the fact is that I can find NO other reference
>>>in any of my other numerous manuals (Some are factory) for dozens of
>>>radios which calls for such a low level of mike input. So now that
>>>leaves 2 possibilities. Either:
>>>
>>>A. You are wrong.
>>>B. Every one of my test procedures are wrong.
>>>
>>>Now what is the statistical probability of either of those choices?
>>
>>
>>You left out a few other choices:
>>
>>C. At least one of your alignment procedures is wrong. - Not possible as they are all
consitant with each other.
>>D. You are making this a personal issue instead of a technical issue. - Not at all.
>>E. You don't know as much as you think you do. - Actually, I probably know more.
>>F. I am not a liberal. - Yea, and the Pope's Jewish
>>G. Bush is a criminal. - Then so are you, based on your shakey criteria.
>>>>CB is not intended for high-fidelity. Passing the higher freqs widens
>>>>the bandwidth of the channel and makes it more likely to bleed into an
>>>>adjacent channel. That's one reason why CB mods are illegal.
>>>
>>>No kidding. But the audio BPF also cuts back on the very low
>>>frequencies as well. All I know is that the radio is more pleasing to
>>>the ear when the BPF is removed. From a purely legal standpoint, you
>>>are correct.
>>
>>
>>If your high-fidelity operation is creating a bandwidth that exceeds
>>the allowed bandwidth for CB channels then you are a criminal.
>
>Did that bother you when you were "keyclowing" in the early 80's?

Nope.

>>>300-3000 hz is commonly referred to as "communications quality" audio.
>>>This is why most AM rigs have 6 Khz filters in them and SSB rigs have
>>>3 Khz filters. But people like to run D-104's on their rigs, and the
>>>BPF mod makes the radio sound better on those mikes.
>>>
>>>You and I can debate on which method makes more sense, and from a
>>>puritanical standpoint I would probably agree with you. But you have
>>>to remember, that when you are in business working on radios for other
>>>people, they don't want to hear that their mikes are junk, or that
>>>they should do this or that. They want the cheap and easy fix.
>>
>>
>>Maybe that's what -your- customers want.
>
>Yes, that's what they want.
>
>
>>> That's
>>>what removing the BPF gives them. It makes the rig sound as good as
>>>their last one on the same mike.
>>
>>
>>How about just aligning it according to factory specs?
>
>Aligning it properly has no effect on the overall fidelity.

If you have never aligned it according to authorized specs, how do you
know what it sounds like? You don't.

> There is
>nothing to align in the audio stage with the exception of the mike
>gain (Which is a front panel user control on the Cobra 139XLR version)

>
>
>>>
>>>Probability would suggest that yes, you did.
>>
>>
>>It's far more probable that you can't admit you have been wrong all
>>these years.
>
>I haven't been.

I'm sure you can justify your errors, but it's clear that you haven't
been doing the alignment as prescribed by Uniden (for the RS version
of the radio).

>>>There's "works" and then there's "works better".
>>
>>

>>There's also "legal" and "criminal". Corrupting a sweet radio because
>>you are too arrogant to accept your own mistake is criminal.
>
>Now you are being a hypocrite.

How so?

>>About a dozen or so RS models that use the same mic, as well as
>>several GE radios, a couple SBE's, Tram D-60, etc.
>>
>>
>>>>The only discrepancy is with -your- book. It stands alone in the
>>>>modulation procedure you described.
>>>
>>>No, in fact YOURS stands alone.
>>
>>
>>Now you are starting to sound like a little kid in a school-yard
>>squabble.
>
>When you make a blatently incorrect statement, I'm not about to let it
>pass.

Once again, and probably for the tenth time, I can scan the page for
you if you want.

>>>>The question is, given how your
>>>>own description of the audio is indicative of misalignment, and that I
>>>>have a more authoritative reference that disputes yours, why do -you-
>>>>assume that -your- book is correct?
>>>
>>>Because it agrees with several dozen other books.
>>
>>
>>You should probably read those books a little more carefully.
>
>I have.

Then read them for content instead of looking at the centerfolds.

>> While
>>you might expect the RS manuals have similar specs, I have many other
>>manuals on hand and most of them (radios that use dynamic mics)
>
>Which is the great majority of modern solid state rigs.
>
>
>>only
>>have specs for 80 to 100% modulation, which is typically set at 8 to
>>20mV (this is from the sample group I noted earlier). Since the mic
>>range is quite wide and these specs are for radios that have some sort
>>of compression and/or limiting, that lands the mic sensitivity spec of

>>the TRC-449 pretty much on par with most other radios. The only real
>>difference is that the RS service manual has an alignment to set the
>>AM mod at 50%, a procedure that is somewhat out of the ordinary.
>
>My Midland 13-885 has a similar two step process, as does any radio
>with an internal mike gain pot.

What are the specs, and from what source?

>>Regardless, the issue is the TRC-449. I have the original service
>>manual and you don't. I understand why you are upset because it
>>clearly shows that you have been using incorrect specs all these
>>years, and unnecessarily modified an unknown number of radios because
>>of it. You -could- blame Sams for supplying the wrong information. But
>>you won't because you know as well as I do that the responsibility is
>>ultimately yours -- you noticed a problem and failed to make a correct
>>diagnosis. Instead you jumped to the conclusion that the LPF was the
>>cause because bypassing it cured the malady. That's a 'symptomatic
>>remedy' and is no better than declaring a fire is out because you
>>pinch your nose and can no longer smell any smoke. Bad tech skills,
>>Dave.
>
>You're as thick as Twisty. I told you why I removed the BPF.

Yes you did -- because the audio sounded "mushy and compressed". I
never denied you said that. In fact, I have to remind you constantly
of your own words.

>Regardless the difference between .5 and 5 mV would not make the radio
>sound mushy, considering that the AMC is set with 200mV.

Just for kicks I set the pot for 50% mod at 5mV. It sounded "mushy and
compressed". I set it back to 0.5mV and it sounds fine once again. You
are wrong, Dave. You hacked up radios because you are arrogant and
ignorant. Deal with it.

>You're reaching and getting more sloppy at it.
>
>>>A personal preference. I am an audio purist, like I said before.
>>
>>
>>Then you should probably find another hobby besides CB radio.
>
>I have several including ham radio.

Good. Focus on them because you evidently can't stay focused on any
newsgroup topics.

>>> Other
>>>people may not hear anything wrong. Hell, some people find the sound
>>>of an overdriven class "C" amplifer as "fine".

IOW, you are just guessing.

>10:1.

Post your source, Dave. Or are you guessing about that, too?

> With that many CB'ers it stands to reason that the greatest
>source of freeband activity comes from CB.

Pure conjecture.

>>>Any ham who works H.F. knows that conditions vary between the bands.
>>>If DX is the name of the game, those who are rabid about it, will seek
>>>out whatever avenues exist to achieve that goal.
>>
>>
>>Even if it means illegal operation.

Despite your claim that it can't happen, it does.

> Even if you try to
>use the MUF argument, then how would that explain 12 meters? Surely
>you aren't going to argue, just for the sake of arguing, that the
>conditions on 27.555 are all that much different than what's on
>28.005?

Maybe you should take this from the scientific perspective: Make the
observations and -then- formulate your theory on how and why such
things occur.

>What IS different though are the amount of operators present. The old;
>"If a tree fell in the woods and no one was there, did it really make
>a noise" analogy holds here. If the 10 meter band was wide open but no
>one was using it, were the conditions really different?

You're hopeless, Dave. The "analogy" you poorly quoted is an exercise
in existentialism, not radio-wave propogation.

>The plain truth is that 12 meters is a lightly used ham band. 10
>meters is pretty much only active when the sunspot cycle is high, and
>people look there for DX. Otherwise hams tend to flock to 15 meters
>and lower to make their DX contacts.

Maybe that's what happens in your neck of the woods (where trees fall
without making a sound).

> If a sporadic band opening
>happens on 10 meters, most would miss it. But with millions of CBers
>flooding the legal channels, you have an instant beacon that tells
>when the band is opening. Just listen to the noise level rise.
>
>Is your zeal to argue with me overriding the illogic of your position?

Is your zeal to argue with me overriding the fact that you never
noticed how sometimes half the CB is dead while the other half is
skipping like a kid playing hopscotch?

>Besides, I though you had a new job? Isn't it time you got to work?

I have the day off. Isn't it time you got a job?

>why it is pointless to argue with you.

Yet another cop out.

> You feel that your "sources"
>are completely factual, while mine are "propaganda".

I don't "feel" that my sources are factual -- they are. You simply
refuse to verify them. For example, when I do nothing more than repeat
a statement made by Bush himself, you make the automatic assumption
that my quotation -must- be biased without even verifying the source.
OTOH, you have provided absolutely NOTHING in the way of facts that
can be verified..... except for a forged document.

You're pretty lame, Dave.

> What you call
>"facts" are nothing more that reports written by other people.

Reported by other people but verifiable by anyone, including yourself
if you had the willingness to do so. You said from the beginning that
you rely on facts, but when presented with facts that you can verify
you simply ignored them. You are a hypocrite, Dave.

> The
>credibility and agenda of those people call into question the validity
>of your "facts".

The credibility and agenda of those people is irrelevant when the
facts can be verified from other sources, which is something you are
clearly unwilling to do.

> You can't verify any of it. You are trusting that
>other people are telling you the truth. Who says that they are?

YOU can verify ANY of the facts I have shoved down your throat, Dave. But you DON'T! You CAN'T, because admitting those facts would be an admission that you were WRONG, and that's just something you can't do even when Bush himself DID make such an admission!

>The fact that Bush was once busted for a minor traffic offense is a
>diversion. Ted Kennedy was responsible for the death of Mary Jo
>Kopechne, and he's still in office, so the point is irrelevant.

No, it's not irrelevant. At least not according to you. If you are going to hold Kennedy and Kerry to crimes long ago for which they were never indicted, then you should also hold Bush to the same standard. Even more so, since Bush was CONVICTED of a crime, not just accused. Yet you have a double-standard that follows your political bias. And you have the gall to accuse -me- of having political bias -- you're a real prize, Dave.

>You choose to believe what you want to believe. The national Enquirer
>isn't losing subscriptions any time soon either.

Go toot your own horn in another newsgroup. Oh, that's right, nobody buys your bullshit in rec.boats either, do they? Well, maybe you should take that as a clue.

2766. Need New CB Earn Extra $$$$

Newsgroup: rec.radio.cb
Date: 2005-02-16 16:37:54 UTC
From: have_faith_61@yahoo.com
Message-ID: <1108571874.130153.112420@z14g2000cwz.googlegroups.com>
Source record: 196406

Yes the internet is flooded with get rich quick schemes and different
ways to make money, but I found something that is fool-proof! Why
don't you be apart of it. It's perfectly legal, and risk free.
Follow these instructions to the letter and you will see:
SEND $2.00(US) TO NAMES ON A LIST AND POST IT TO 200 VARIOUS NEWS
GROUPS
AND BULLETIN BOARDS... (ALLTHENEWSGROUPS.COM AND COLLEGECLUB.COM HAVE
PLENTY). AND THAT WAS IT AND THE MONEY STARTED ROLLING IN BY THE WEEK`S
END.

I MEAN THE MONEY JUST KEEPS COMING AND COMING IN. NOW I AM SURE YOU ARE
THINKING THAT THIS HAS GOT TO BE ILLEGAL BUT IT`S NOT
BECAUSE THERE IS NO WAY I WOULD RISK GETTING BANNED FROM ANY GROUP OR
HAVE
THE COPS PICK ME UP FOR SOMETHING ILLEGAL.

BELIEVE ME, THIS IS SO REAL. YOUR INVESTMENT IS $12 MEASLY DOLLARS AND
6
STAMPED ENVELOPES. AND YOU ONLY HAVE TO SEND OUT THIS MONEY ONE TIME!!!

NOW I AM SURE YOU ARE THINKING THAT THIS HAS GOT TO BE ILLEGAL BUT IT`S
NOT
BECAUSE THERE IS NO WAY I WOULD RISK GETTING BANNED FROM ANY GROUP OR
HAVE
THE COPS PICK ME UP FOR SOMETHING ILLEGAL.

BELIEVE ME, THIS IS SO REAL. YOUR INVESTMENT IS $12 MEASLY DOLLARS AND
6
STAMPED ENVELOPES. AND YOU ONLY HAVE TO SEND OUT THIS MONEY ONE TIME!!!

THIS IS NOT A RIP-OFF, IT IS NOT INDECENT AND THERE ARE NO MISLEADING
PROMISES OR CLAIMS OR ANYTHING TO SELL. AND IT IS SO LEGAL. YOU CAN
HAVE
THOUSANDS OF DOLLARS IN LESS THAN A MONTH.

THIS PROGRAM REMAINS SUCCESSFUL BECAUSE OF THE HONESTY OF IT`S
PARTICIPANTS.
PLEASE CONTINUE ITS SUCCESS BY CAREFULLY FOLLOWING THE INSTRUCTIONS.
YOU
WILL BECOME PART OF A MAIL ORDER BUSINESS. IN THE BUSINESS, THERE IS
NEITHER
SOLID NOR TANGIBLE, IT`S A SERVICE. YOU IN THE BUSINESS OF DEVELOPING
MAILING LISTS. MANY LARGE CORPORATIONS PAY BIG MONEY FOR QUALITY LISTS.

HERE ARE THREE EASY STEPS TO FOLLOW, REMEMBER TO FOLLOW THEM EXACTLY:

STEP 1.

GET 6 PIECES OFPAPER AND WRITE OR TYPE THE FOLLOWING:

PLEASE PUT ME ON YOUR MAILING LIST

YOUR NAME

YOUR ADDRESS

YOUR CITY STATE AND ZIP

NOW GET 12-- $1.00(US) BILLS AND FOLD THE PAPER AROUND THE BILL AND PUT ONE
BILL IN EACH ENVELOPE AND SEAL THEM. NOW THAT YOU HAVE 6 ENVELOPES WITH

$2.00 WRAPPED IN PAPER IN EACH OF THEM, SEND THEM TO THE FOLLOWING ADDRESSES:

1. T. CORTEZ, 919 VINEYARD VINE WAY, LAS VEGAS, NV 89032

2. L.STEVENSON JR, 595 PIEDMONT AVE NE#356, ATLANTA, GA 30308

3. T.THOMPSON, 5280 LITTLE MOUNTAIN DR #K4, SAN BERNARDINO, CA 92407

4. M.Strickland, 934 s. Oakley Blvd., Chicago ,IL 60612

5. Marianne Crist, 1680 21st Ave. SW, Vero Beach, Fl 32962

6. R.Projecty, C/O P.O. Box 80659. St Clair Shores, MI 48080

STEP 2
NOW, FOR THIS TO BENEFIT YOU, TAKE THE TOP NAME OFF THE LIST YOU SEE ABOVE
AND PUT YOUR NAME AT THE BOTTOM OF THE LIST. CHANGE ANYTHING YOU FEEL NEEDED
KEEPING IT CLOSE AS POSSIBLE.

STEP 3.
NOW POST THIS MESSAGE, WITH YOUR NAME ADDED TO THE LIST, TO 200 NEWS GROUPS
THAT YOU CAN FIND ALMOST ANYWHERE. DO NOT TRY TO MOVE YOURSELF UP THE LIST
BECAUSE YOU CAN MAKE THIS MONEY EASILY BY FOLLOWING THE INSTRUCTIONS EXACTLY.

IT REALLY DOES WORK, DO IT TODAY, GET YOUR
SHARE!!!!!!!!!!!!!!!!!!!!!!AND
ENJOY ALL THE MONEY POURING IN!

REMEMBER THIS IS ABSOLUTELY LEGAL. WHEN CHECKING WITH THE POSTAL SERVICE FOR
FRAUD, THEY CONFIRMED THAT IT TRULY IS LEGAL!!!!!!!!!!!!!!!!!!!

GREAT OPPORTUNITY! MAKE MONEY--SPEND IT ON WHAT YOU WANT

Is that a rhetorical question? I'm asking because I know you already
have an answer that's based upon your "core beliefs". And I know that
because you didn't include the possibility that he -isn't- a "long
term lurker", but merely someone who found the newsgroup, read your BS
and decided to introduce himself as a proponent of truth. But you and
your crystal ball already have excluded that possibility, haven't you,
Dave?

How is that changing topics? It's the same topic. You evidently did
not understand what was saying, and it comes off looking like a
contradiction. Perhaps I didn't word it quite right, but in essence
the two major points that I made were:

1. That out of the recent FCC busts for freebanding, that a
significant percentage of them were licensed hams.

2. Out of the TOTAL amount of freebanders, those with ham licenses are in the minority. Hence the term "most don't".

>
>I've watched the speed thread and contrary to what you
>interpret, there is no written or "Unwritten" (to which no-one
>could prove... Because it's unwritten) law saying a Cop can't
>write you a ticket for going 56 in a 55 MPH zone.

Did you not read the statute that I posted? It states just that in black and white. When using electronic or electro- mechanical speed measuring devices the cops in the state of Pa. MUST give AT LEAST a 5 MPH grace. The only exception is in a school zone, or when being pursued by a cop car with a "certified" speedometer.

http://members.aol.com/StatutesP1/75PA3368.html

Read it again, and pay particular attention to 3368 (c) paragraph 4.

> Will the cop win in court? Probably, not enough people
>know that they can ask for certificate of calibration on his
>gun or clocking device or that they should go and get "their" own speedo
>calibrated.
> By the way, Vascar is illegal in California, it's considered
>entrapment, so there's another defense.

But RADAR isn't? They're two different methods for doing the exact same thing.

All that shows is that states vary in their methods toward traffic enforcement.

Dave Hall <nojunk_n3cvj@ptd.net> wrote:

| Quite a few according to many of the more recent FCC enforcement
| actions. It would seem that the FCC is more likely to pop a licensed
| ham for operating out of their assigned bands, than they are in
| popping an unlicensed radio pirate.

It's probably because it's a lot easier to track down -- after all, if
the licensed ham is properly IDing himself, it's trivial for anybody
who listens to look up that call sign and find that his ham class
doesn't let him transmit there.

| If you are going to freeband, having a ham license may actually be
| detrimental.

Freebanders don't generally ID themselves at all. To actually track
one down would be a lot harder.

(4 minutes later you post again, same thread, different post:)

>"Assuming freebanders have ham licenses.

>Most don't.

(Now you asked Dave, please don't attack the messenger.)

>How is that changing topics? It's the same

>topic. You evidently did not understand what

>I was saying,

NOBODY understands what you say Dave, and you *always* blame it on the
other person, when in fact, it's you. In one day, you have accused three
people of not understanding you. Perhaps you can now take a look at what
you have been told by what is becoming more and more people on a regular
basis: you have a problem making your feelings known and conveying what
you mean, which is a commnication issue and it's NOT with everyone else,
Dave, it's with you.

>and it comes off looking like a contradiction. P

You *are* a contradiction, Dave,,trouble is, you are the only one unable
to see it, which leads us to the other fact you refuse to grasp: no one
views you the manner in which you view yourself. Your issues lead to you
blaming the other person (not their topic) in all your posts.

>Perhaps I didn't word it quite right, but in

>essence the two major points that I made

>were:

>1. That out of the recent FCC busts for

>freebanding, that a significant percentage of

>them were licensed hams.

That wasn't the point everyone else took from what you claimed, as what you claimed is NOT what you are now attempting to redefine. What you claimed was "quite a few freebanders have licenses"

>2. Out of the TOTAL amount of freebanders,

>those with ham licenses are in the minority.

Which is yet another topic, as it doesn't negate your first claim, and that is that quite a few hammie have licenses".

>Hence the term "most don't".

Conjecture based on logic you can not even define, let alone explain. Tell us agin how you use forensics in your reasoning. Remember, your original calim was that you USED forensics in your reasoning and work, yet when you were instructed by Frank as to the proper usage of the word, you came back adn (as always) tried to explain what you really meant by misusing the term. Only then did you say the reasoning you employ is "like" forensics, completely disregarding your earlier and incorrect claim, yet you refused to acknowledge you were wrong, a pattern that is becoming evident and screamingly obvious in the majority of your posts, regardless who you choose to blame, next.

Source record: 196417

From: nojunk_n3cvj@ptd.net (Dave Hall)
On Tue, 15 Feb 2005 11:53:23 -0500,
>as it turns out, I was right about it.

See:
http://members.aol.com/StatutesP1/75PA3368.html
Pay particular attention to 3368 (c) number 4., which states:
"No person may be convicted upon evidence obtained through the use of devices
authorized by paragraphs (2) and (3) unless the speed recorded is six or more miles per hour in excess of the legal speed limit.
Furthermore, no person may be convicted
upon evidence obtained through the use of devices authorized by paragraph (3) in an area where the legal speed limit is less than 55 miles per hour if the speed recorded is less than ten miles per hour in excess of the legal speed limit. This paragraph shall not apply to evidence obtained through the use of devices authorized by paragraph (3) within a school zone"
-
There is no rule, unwritten or written that requires the officer to ignore a speeder. To wit...the portion you conveniently snipped shows how your claim is not across the board and is an exception, as it pertains ONLY when traveling in areas with posted speeds LESS than 55, whereas the the posted interstate (65 MPH) speeds, of which Pa. finally raised from 55 not too long ago, are the speed LIMITS imposed by the state of Pennsylvania.

>There are still many limited access roads

>which are posted at 55.

You're roving. There are also many local and city roads where the speed is 35. Not relevant to the maximum speed limit imposed by the state.

> In fact, the majority of places where they

>allow 65 are those areas where the highway is
>not in a "congested" (meaning densely

>populated) area.

Regardless, you are citing the exception. Once again, you can cite no rule requiring the officer to give a window of ANY speed in regards to the states maximum imposed speed limit.

>In most others, it's still 55.

On the interstates in Pa, the maximum speed is 65 MPH. See above.

>Now, Read the statute again, slowly this time:

> "No person may be convicted upon evidence

>obtained through the use of devices

>authorized by paragraphs (2) and (3) unless

>the speed recorded is six or more miles per

>hour in excess of the legal speed limit."

>That applies to all speeds.

It doesn't. It applies only as described below.

>The following paragraph applies specifically to
>speeds below 55:

The "following" paragraph was part of the one you presented, in fact,
directly followed the last sentence above.

>"Furthermore, no person may be convicted

>upon evidence obtained through the use of

>devices authorized by paragraph (3) in an

>area where the legal speed limit is less than

>55 miles per hour if the speed recorded is less
>than ten miles per hour in excess of the legal

>speed limit."

>Which means (for the cognitively impaired),

>that when using a method other than RADAR

>(Which usually means VASCAR) on a road

>where the posted speed is less than 55, they

> must give you 10 MPH leeway,

That's NOT what it says. Here is the interpretation for you,
Dave,,,,where the POSTED speed limit is 55 or LESS is the ONLY manner
where it applies.it is a specific exception. Once again, the maximum
posted speed limit on Pa interstates is 65. There is NO law or rule, or
even "unwritten" as you claim, that REQUIRES the officer to GIVE any
leeway at all.

>additional 5 MPH over what the previous

>paragraph called for..

>The minimum that they have to give you on

>any road and with any speed measuring

>device is 5 MPH.

Not ANY road, Dave, ONLY those roads where ythe posted speed is LESS
than 55, which rules out the number one place the STATE police are using
radar,,,the interstates where the speed is ..taadaaa..65.

>On certain other roads and with non-RADAR

>speed devices, they have to give MORE.

>The only exception to this rule is:

>"This paragraph shall not apply to evidence

>obtained through the use of devices

>authorized by paragraph (3) within a school

>zone"

>A school zone is the only place where they

>can pop you for less than 5 MPH over.

Wrong, The interstate is where they ARE popping people, and the number
one place the State Police patrol (who, incidentally, are the only cops
in Pa permitted to use such devices), where the maximum posted speed
is....again,,,65.

_
Pa. has no rule OR law,
that requires a LEO to give a window of 5 mph (or ANY speed) to speeders
in excess of the state speed limit, which happens to be 65 MPH.
>I just posted it.

And you are still wrong.

>If you can't comprehend it, that (as usual) is

>your comprehensive deficiency showing.

Just like you maintain roger beeps are illegal,
and claimed that others believed that as well, you were unable to cite
a single person that maintained such.
Again, cite a single person that misinterprets this to read as you
claim...just one.

>Now go ahead and try to spin the school zone

>angle in another feeble attempt to prove me

>wrong.

Feeble is your insult above whenever you realize you are wrong. In fact,
the moment youbegin to comprehend you are wrong, you attack the person
pointing out your incompetence. The pattern is the same all through your

posting history,,,once you are shown your errors, you insult the person you are debating and try to drop the topic and make your topic of the person. In fact, you have admitted on several occasion, you like nothing more than to make me your topic.

>Don't fret though. The statistical probability is

>that you'll eventually find something you can

>ding me with someday. It's just that today isn't

>it.

"Ding" you? My goodness, David, you have been made to "ding" yourself so many times, not one person can hold a straight face when you accuse others of trying to "ding" you. You manage that all by your lonesome.

>Now where is that LEO group?

Where's one of those folks you claimed agreed with you that roger beeps are illegal? When asked to cite one, you retreated faster than greased lightning and haven't touched the subject again. Of course, nobody expected you to cite anyone, Dave, as NO ONE agrees with ypu..no one! Tell ya' what, Davie, since I'm a nice guy and feeling generous and you're an angry guy feeling bad ..,,cite someone that agrees with you on your claim regarding the 55 law in your state as pertaining to your claims that a Pa State Cop (as only State Cops in Pa have radar) is REQUIRED to give a window to ALL speeders, and I'll post the URL right here.
Take all the time you need.

Dave
"Sandbagger"
Dave,
yeah, I seem to notice that this is true for a rather large percentage
of the human race these days (is it me or have IQ's dropped recently?).

>No, it's not that people are getting dumber, it's

>just that electronic forums like the internet

>(And public two-way radio) allows people to

>disregard the rules of common courtesy

>and decency when they interact with people in
>a way that they would never do in a

>face-to-face exchange.

Exactly. recognized in your unprovoked insults to those you disagree.

>Anonymity also plays a large role. Sociopathic
>people hold their peers in contempt,

That explains your behavior of accusing all you disagree with of not
understanding what you "meant". Of course, your communication deficits
play a large role,,

> and like to use them as "toys" in a big head

>game. They feel safe because no one knows

>who they really are, and that just enables this

>behavior.

Which would explain your constant paranoia of sock puppets (of which
only YOU continue to invoke), and continued use of such puppets.
Classic. Your projection is illustrated by your constant paranoia and
accusing those you disagree of ganging up on you, not understanding you,
taking sides...hell, that's the best part yet. You are so screwed up
inside, when another challenges your idiocy, you accuse them of taking
"sides" with,,,,who else..TWISTEDHED!

>David T. Hall Jr.

>N3CVJ

>"Sandbagger"

Your poor family.

Same here, going to a nascar party for it..time to dust off the #40 cap
and shirt. Hope it's not a snooze fest like those restrictor plate
races can be sometimes.

Forgive me Dave, I should've said EST, which was
7:07 & 7:11, Is that better? Does EST or PST have anything
to do with the time frame?

It was a contradiction, word it as you want, but on one
post you put that "quite a few hams are busted".
Next post you say not many, that is a contradiction.

Perhaps I didn't word it quite right, but in essence
> the two major points that I made were:

Why? speeding is speeding, no matter how the evidence was
gathered. You made a statement that cops don't write tickets
in Pa unless they are over 5 MPH, that's not true.
Otherwise, there wouldn't be a law saying exceeding the
speed limit is against the law. Not exceeding the speed limit
by 5 to 6 MPH is against the law.

I prefer this website for info:
http://www.pacode.com/secure/data/067/chapter211/s211.71.html

> enforcement.

Of course, that's a give me. But you say that Cops won't
give you a ticket unless you are going over the posted
speed limit by 5 to 6 MPH, that's not correct.

But having a ham license gives freebanders access to equipment that
normally would not be available to unlicensed individuals. Some
retailers will not sell gear to unlicensed persons, nor will some
hamfests award prizes to those who hold no license, offering an
equivalent cash value instead.

I doubt if the hams who freeband are dumb enough to use their calls
there (but you never know). But I wouldn't be surprised to learn that
they are "recognized" there by other people who turn them in.

>| If you are going to freeband, having a ham license may actually be

Yes, I agree. It just seems funny that the latest freeband bust seem
to be hams running out of band over unlicensed operation.

It would seem that Riley H. is much more concerned with keeping
"honest" hams honest, rather than eradicating the freeband.

Read the FCC web site of recent enforcement actions for an accounting
of who was busted.

Surely you are not about to suggest that the majority of freebanders
are actually hams are you? I'd like to see your logic for backing that
one. There are more freebanders than there are US hams (at least there
used to be)

>Why? speeding is speeding, no matter how the evidence was

>gathered.

Read it. It CLEARLY states that when using any electronic or
mechanical speed measuring device (With the exception of a calibrated
moving speedometer) that they HAVE TO allow at least 5 MPH (RADAR) and
up to 10 MPH (VASCAR). It's in there in black and white. Yet you guys
insist on continuing to argue with me. Don't argue with me, argue with
the state, they wrote it.

>You made a statement that cops don't write tickets
>in Pa unless they are over 5 MPH, that's not true.

I live here, you would think I'd have a little more knowledge in this
area, than someone who lives 2000 miles away.

> Otherwise, there wouldn't be a law saying exceeding the
>speed limit is against the law. Not exceeding the speed limit
>by 5 to 6 MPH is against the law.

The speed limit is the law, but the courts would be full of people
challenging the citation on the basis of the accuracy of the devices,
especially VASCAR as it is a manually triggered device. It's a waste
of taxpayer's dollars to see cases that will most likely get thrown
out. Pa code 3368 (c) (4) specifically addresses this issue by
allowing a reasonable tolerance. It's a lot harder to make a
convincing argument to a judge that it's a "mistake" if you were
found running 10 MPH or more over the limit.

>
>I prefer this website for info:
>http://www.pacode.com/secure/data/067/chapter211/s211.71.html

That site doesn't tell you anything specific. It only defines terms
and points people to specific codes (And Pa. 3368 is one of them) for
specific rules.

>

That's not the point. Regardless of the accuracy, why would one method
(VASCAR) be considered "entrapment" while another (RADAR or LIDAR)

not? Perhaps you can explain?

It is correct. 3368 (c) (4) says so in the great majority of cases.

Wrong:

==========
(c) Mechanical, electrical and electronic devices authorized.--

1. Except as otherwise provided in this section, the rate of speed of
any vehicle may be timed on any highway by a police officer using a
mechanical or electrical speed timing device.
2. Except as otherwise provided in paragraph (3), electronic devices
such as radio-microwave devices (commonly referred to as electronic
speed meters or radar) may be used only by members of the Pennsylvania
State Police.
3. Electronic devices which calculate speed by measuring elapsed time
between measured road surface points by using two sensors and devices
which measure and calculate the average speed of a vehicle between any
two points may be used by any police officer.
4. No person may be convicted upon evidence obtained through the use
of devices authorized by paragraphs (2) and (3) unless the speed
recorded is six or more miles per hour in excess of the legal speed
limit. Furthermore, no person may be convicted upon evidence obtained
through the use of devices authorized by paragraph (3) in an area
where the legal speed limit is less than 55 miles per hour if the
speed recorded is less than ten miles per hour in excess of the legal
speed limit. This paragraph shall not apply to evidence obtained
through the use of devices authorized by paragraph (3) within a school
zone.
============

Not on all of them. I live and travel them on a daily basis. You can
expect me to tell you how the fish are running inTampa Bay so don't
you try to tell me about the roads in my state. You know nothing about
it.

>That's NOT what it says. Here is the interpretation for you,
>Dave,,,,where the POSTED speed limit is 55 or LESS is the ONLY manner
>where it applies.it is a specific exception. Once again, the maximum

>posted speed limit on Pa interstates is 65. There is NO law or rule, or
>even "unwritten" as you claim, that REQUIRES the officer to GIVE any
>leeway at all.

Read it again. I realize that comprehension has always been your weak spot, but try separating the paragraph into parts.

The first part:

"No person may be convicted upon evidence obtained through the use of devices authorized by paragraphs (2) and (3) unless the speed recorded is six or more miles per hour in excess of the legal speed limit."

Nowhere in that sentence is there a specific speed limit listed. That means that this applies to 65 MPH roads and using RADAR. This statute states that LEO must give a 5 MPH grace. How much more clear can it be?

The next part is a FURTHER restriction:

"Furthermore, no person may be convicted upon evidence obtained through the use of devices authorized by paragraph (3) in an area where the legal speed limit is less than 55 miles per hour if the speed recorded is less than ten miles per hour in excess of the legal speed limit."

This part specifically refers to the conditions that (a) the road is posted at less than 55, and (b) are using devices authorized in paragraph 3 (normally VASCAR). In this case they have to give you a 10 MPH grace.

"This paragraph shall not apply to evidence obtained through the use of devices authorized by paragraph (3) within a school zone."

This is the only exception to the rule.

Once again, you demonstrate, to people with normal comprehensive ability, that you can't understand what you read. It's no wonder you jump to the wrong conclusions over and over again in the scant 4 years that you have been polluting this newsgroup. Your pattern of habitual incomprehension is all the more apparent if one walks through Google for a few minutes.

This is my last word on the subject. If you won't take Pa. law as evidence that a minimum of a 5 MPH grace exists, then that's not my problem. I've been driving for 29 years now and I've never gotten a speeding ticket. I run right through speed traps while running within the "tolerance" speed and I've never been hassled or pulled over.

I know several cops who confirm this. I could name them, but it wouldn't prove anything since you don't know them. I could just as easily make up names.

But nowhere does it state that any grace is given when the speed
measuring device is mechanical or electrical, as per paragraph (1). So
if they are using a paragraph (1) device then they CAN bust you for
doing 56 in a 55 zone.

My bad. I should have said "shifted value". You are right about
tolerance.

But no, I don't keep my bad parts as a rule, unless the failure mode
is very unusual. If I did, I'd be swimming in them.

Hmm, sounds like a contradiction Frank. You don't assume the diode is
the problem, but then you say you replace it anyway?

Don't worry, I understand what you are really saying, but it's an
illustration of how people who don't comprehend well could spin that
into an accusation of contradiction. In this case, you LEARNED from
experience, and use that learned knowledge to prevent future problems.
That's exactly what I do. But you call that "guessing" or "gambling".

Finally? I've been involved in enough product design, that I fully
understand the idea of planned obsolescence. If you wanted that answer
before, all you had to do was ask, instead of tap dancing around
filament thickness in 12V vs. 120 volt bulbs.

>>My Midland 13-885 has a similar two step process, as does any radio

>Just for kicks I set the pot for 50% mod at 5mV. It sounded "mushy and
>compressed". I set it back to 0.5mV and it sounds fine once again. You
>are wrong, Dave. You hacked up radios because you are arrogant and
>ignorant. Deal with it.

You are lying through your teeth (assuming you have them) Frank.

You are trying to posit that by adjusting VR6 for 50% modulation at
5mV, instead of .5mV (a reduction in gain) the audio became "mushy and
compressed"?
You might be able to make a believable case that by increasing gain
that you might make the audio compressed (driving the AMC too hard
might do that), but reducing the gain? C'mon Frank, you might be able
to sell that swampland story to a truck stop "tech", but it won't fly
with me.

But you see, that's a bunch of hooey, because VR6 is nothing more than
a mike gain control. In fact, on the Cobra 139XLR radio (the
identical chassis) that I now have, the VR6 pot becomes the front
panel mounted "dynamike" control. The operator can adjust that pot at
any point. If the setting was as critical as you are trying to
portray, do you think they would allow that to be a user control?

That radio chassis, in its various forms was all over my local area 20
years ago. Many people hacked them up (as they did with other radios).
Most totally defeated the AMC and cranked the mike gains wide open.
The radio still sounded fine (within the stock BPF limitations), if
the operator was judicious in the application of the mike gain. It's
just not THAT sensitive Frank.

Been there done that. I built an AM broadcast transmitter when I was a
kid, I've built tube and solid state receivers. I've designed computer
interfaces for radio control. I built my own repeater controller and
homebrewed a DTMF decoder.

I don't do it much now as the demands of family life, and being a good parent have taken much of what used to be "hobby time".

Pennsy is not a radar stste by any means

You are completely daft. Every single State
Police Officer with a patrol unit is equipped
with them.

>You are completly a fool, The state Police are

>the only ones who use radar in the state,

>no

>town's or cities or municipalties, deputies none
>use radar. That means it is not a radar state.

By whose definition? Yours? It's wrong.
A non-radar state would mean just what the phrase connotates: the state
is void of radar.

>
>You are trying to posit that by adjusting VR6 for 50% modulation at
>5mV, instead of .5mV (a reduction in gain) the audio became "mushy and
>compressed"?

Actually it's called 'downward expansion', as I stated previously. But
the effect on the audio is just as you described.

>You might be able to make a believable case that by increasing gain
>that you might make the audio compressed (driving the AMC too hard
>might do that), but reducing the gain? C'mon Frank, you might be able
>to sell that swampland story to a truck stop "tech", but it won't fly
>with me.

Of course not, because you can't test the difference for yourself,
just like you keep stalling with putting caps on your battery charger.
You can't because you are afraid that you might be forced to admit
that you are wrong.

>But you see, that's a bunch of hooey, because VR6 is nothing more than
>a mike gain control. In fact, on the Cobra 139XLR radio (the

>panel mounted "dynamike" control. The operator can adjust that pot at
>any point. If the setting was as critical as you are trying to
>portray, do you think they would allow that to be a user control?

So you're telling me that adjusting the mic gain control on any radio
that has it doesn't have -any- effect on the quality of the audio?

>That radio chassis, in its various forms was all over my local area 20
>years ago. Many people hacked them up (as they did with other radios).
>Most totally defeated the AMC and cranked the mike gains wide open.
>The radio still sounded fine (within the stock BPF limitations), if
>the operator was judicious in the application of the mike gain. It's
>just not THAT sensitive Frank.

You are making a big fuss when the solution is so simple, Dave. But
you can't bring yourself to tune the radio according to the spec in
the authorized manual because you can't accept even the -possibility-
that I'm right. That's pathetic.

>>>CB repair did pay the bills for me while my peers flipped burgers at

Who didn't? Radio shack sold the kits, and almost every electronics
magazine published such articles on a regular basis.

> I've built tube and solid state receivers.

From a kit or from someone else's plans? And don't tell me you
designed one from scratch because I wouldn't buy that for a minute,
not with your weak understanding of electronic theory.

> I've designed computer
>interfaces for radio control.

So you tapped the serial port to run Morse. Whoopee. I had a contract
a couple years ago where I designed a GPS navigation system for a
remote-controlled aircraft that is being used for ground penetrating

radar by a local mining company. Wanna hear what else I've done?

> I built my own repeater controller and
>homebrewed a DTMF decoder.

You "homebrewed" a DTMF decoder? Don't you mean that you bought a chip
and hooked it up to a power supply and a few externals?

>I don't do it much now as the demands of family life, and being a good
>parent have taken much of what used to be "hobby time".

That's why you spend so much time on the newsgroups, huh?

Gee,,,that's because only State Cops are
permitted to have them in Pa.

>Gee, then that makes pennsy not really a

>radar state

LMAO,,,"Here comes Davie with his heart in his hand he's a one boy band
and he's off to the rodeo...."

Here you are redefining what you "really" meant.
Now you are back-pedaling with "Pa is not REALLY a radar state". LMAO,
Again,,if it was a non-radar state, radar would not be implemented by
the authorities. In fact, you are the only one I have ever heard ue the
term "non-radar" state when the state does in fact, use radar. Can you
cite a single source where you took this phrase from? Perhaps a link or
provide for it? Of course you can't, Dave, it;s why you are lending
support to yourself.

> and you were bleeding all over yourself on

>point in a previous post.

I love pointing things out like this...once again, you are the only one
not comprehending the gaping wounds responsible for all the blood you
attribute to others are all yours....just like your false and unprovoked
insults and accusations against all who disagree with you, your
projection is classic these days, Dave.

>wealth of Pa

A lawyer interprets the law, they do not make it, so, keeping with that original thought, YOU call the lawyer, as you are the only one suffering great communication problems, evidenced by your need to contact the fcc when everyone else already knows roger beeps are legal. Besides, only you need another to explain and interpret communication law to you, so there is no reasonable manner one can expect you to know much about anything, based specifically on your past and presented ignorance and unprovoked malice. You're a lid, David.

Show the statute.

Pennsylvania has a wierd exception for Speed limits.
Code § 3362
Maximum speed limits. (b) Posting of speed limit.-- 1. No maximum speed limit established under subsection (a)(1), (1.2) or (3) shall be effective unless posted on fixed or variable official traffic-control devices erected in accordance with regulations adopted by the department which regulations shall require posting at the beginning and end of each speed zone and at intervals not greater than one-half mile. 2. No maximum speed limit established under subsection (a)(1.1) shall be effective unless posted on fixed or variable official traffic-control devices erected after each interchange on the portion of highway on which the speed limit is in effect and wherever else the department shall determine.

>Basically if the sign is not posted under the

>conditions above. NO SPEED LIMIT IS IN

>EFFECT. Many people do not know about this
>loophole.

Interesting. Its not relevant to the position N3CVJ maintains (that all Pa State Cops must give a window to ALL speeders) but interesting nonetheless.

On the contrary Dave, it shows the EXACT Law, to which it
states clearly
SPEED LIMIT GROUP, R2 SERIES

§ 211.71. Speed restrictions.
(a) Lawful limits. The numerical speed limit displayed on signs in the speed limit group shall not exceed the lawful limits established in the Vehicle Code.

(b) Study. An engineering and traffic study must be made in accordance with Chapter 201 (relating to engineering and traffic studies) in order to justify establishment of any proposed speed limit, other than the basic 35 miles per hour limit in an urban district or the maximum 55 miles per hour limit in other areas.

(c) Approval. Department approval shall be obtained before any speed limit is established on a State-designated highway, except as follows:

(1) Local authorities may establish the basic 35 miles per hour limit in an urban district without Department approval; however, Department approval shall be required for placement of the signs. In requesting Department approval to erect the signs, local authorities shall provide the Legislative Route number and limiting stations of the speed zone for the records of the Department.

(2) Local authorities which have entered into an agreement with the Department authorizing them to install official traffic control devices on State-designated highways without specific Department approval may establish any speed restriction without Department approval, after the necessary engineering and traffic studies have been completed. However, local authorities shall provide the Department with a copy of the ordinance establishing the speed restriction.

(d) Speed restrictions established under 75 Pa.C.S. §§ 3362-3363 (relating to maximum speed limits and alteration of maximum speed limits), shall be referred to as "speed limits;" except that speed restrictions in work areas shall be referred to as "work area speed limits."

(e) Speed restrictions established under 75 Pa.C.S. • 3365(a) shall be referred to as "bridge speed limits."

(f) Speed restrictions established under 75 Pa.C.S. • 3365(b) shall be referred to as "school zone speed limits."

(g) Speed restrictions established under 75 Pa.C.S. • 3365(c) shall be referred to as "hazardous grade speed limits."

Source

The provisions of this • 211.71 amended October 1, 1982, effective October 2, 1982, 12 Pa.B. 3505. Immediately preceding text appears at serial page (57205).

>
> That's not the point. Regardless of the accuracy, why would one method
> (VASCAR) be considered "entrapment" while another (RADAR or LIDAR)
> not? Perhaps you can explain?

Nope, that method was dropped in the late sixties in Ca.
I have no desire to go looking back through laws from 40 years ago. I will tell you that more & more departments and CHP
are going to Lidar, much more accurate.

>>>
>>> All that shows is that states vary in their methods toward traffic
>>> enforcement.

> It is correct. 3368 (c) (4) says so in the great majority of cases.

This all started when you said that you won't get a ticket for going 1 MPH over the speed limit. You then changed the subject to that the Cops won't do it because their equipment & laws
governing that allow for a +/- grace.

Dave wrote:

That depends on the state. Some states (I believe Maryland is one) have what they refer to as "Zero tolerance" 65 MPH. They can bust you for 66, or so I've been told. I don't know how many cases have been fought over speedometer or other potential speed inaccuracies and how well the "zero tolerance" aspect has held up.

Most car speedometers are not so accurate that a 1 MPH difference is all that hard to believe. Just putting one size larger tires on your car can make that difference.

People have fought a speeding ticket on this basis and have won. That's part of the reason why Pa. gives some leeway. Most cops don't want to have to appear in traffic court when the chances are good the case could get thrown out. However, it's a lot harder to make a case for speedometer inaccuracies when you're 10 MPH or more over.

Dave

You are wrong, speed limits do not have a grace
"well your honor, here's the law stating that he has to give me
a grace of 6 or so MPH over the speed limit"
Judge "Really? OK, here's a fine of 200 to 250 for going
6 or so MPH over the speed limit"

Dave stated, "In Pa. they are required to give 5 MPH to take care of
'Speedometer' and speed measuring inaccuracies." To support his
statement he cited a part of PA law that was consistent with his
statement, but intentionally neglected to cite the part of PA law that
fully disproved his statement; i.e, paragraph (1). And when confronted
with this fact he attempted to exonerate himself by claiming he posted
the link, as if that was enough to excuse his blatant distortions.

You defend this behavior?

On Wed, 16 Feb 2005 17:40:48 -0500, iamnotgeorge@webtv.net (I
AmnotGeorgeBush) wrote:
There is no rule, unwritten or written that requires the officer to
ignore a speeder. To wit...the portion you conveniently snipped shows
how your claim is not across the board and is an exception, as it
pertains ONLY when traveling in areas with posted speeds LESS than 55,
whereas the the posted interstate (65 MPH) speeds, of which Pa. finally
raised from 55 not too long ago, are the speed LIMITS imposed by the
state of Pennsylvania.

>There are still many limited access roads

>which are posted at 55.

You're roving. There are also many local and city roads where the speed
is 35. Not relevant to the maximum speed limit imposed by the state.

>In fact, the majority of places where they

>allow 65 are those areas where the highway is
>not in a "congested" (meaning densely

>populated) area.

Regardless, you are citing the exception. Once again, you can cite no
rule requiring the officer to give a window of ANY speed in regards to
the states maximum imposed speed limit.

>In most others, it's still 55.

On the interstates in Pa, the maximum speed is 65 MPH. See above.

>Not on all of them.

Yes, on ALL of them. If you are going to try and say portions of the
interstates have reduced speeds and try and invoke this as your point of
reasoning for saying "not all of them", you really have issues and can't
stand to be shown you are wrong. ALL interstates have reduced speeds in
some areas.

> I live and travel them on a daily basis.

(snip)

Your personal experiences are null, void, and irrelevant to the facts.
You not only proved this with your claim that you "USED forensics" in
your reasoning and repair approach to radios, but affirmed it by setting
forth the amount of time you spent in radio as some sort of self-styled

litmus test when comparing yourself and knowledge to other ops, then turned around and not only made the claim that roger beeps were illegal, but willfully, stubbornly, and defiantly clung to such ignorance, even when taught better by several other hammies.

>You can expect me to tell you how the fish are
>running inTampa Bay so don't you try to tell

>me about the roads in my state. You know

>nothing about it.

Crystal: BALL,,,there's so many things Dave needs to know,,,Crystal-Ball
-
That's NOT what it says. Here is the interpretation for you, Dave,,,,where the POSTED speed limit is 55 or LESS is the ONLY manner where it applies.it is a specific exception. Once again, the maximum posted speed limit on Pa interstates is 65. There is NO law or rule, or even "unwritten" as you claim, that REQUIRES the officer to GIVE any leeway at all.

>Read it again. I realize that comprehension

>has always been your weak spot, but try

>separating the paragraph into parts.

>The first part:

>"No person may be convicted upon evidence

>obtained through the use of devices

>authorized by paragraphs (2) and (3) unless

>the speed recorded is six or more miles per

>hour in excess of the legal speed limit."

>Nowhere in that sentence is there a specific

>speed limit listed. That means that this applies
>to 65 MPH roads and using RADAR. This

>statute states that LEO must give a 5 MPH

>grace. How much more clear can it be?

>The next part is a FURTHER restriction:

Restriction to WHAT? There must be a prior item in order for it to be FURTHER, and the prior item is exactly what it relates.

>"Furthermore, no person may be convicted

>upon evidence obtained through the use of

>devices authorized by paragraph (3) in an

>area where the legal speed limit is less than

>55 miles per hour if the speed recorded is less
>than ten miles per hour in excess of the legal

>speed limit."

>This part specifically refers to the conditions

>that (a) the road is posted at less than 55, and
>(b) are using devices authorized in paragraph

>3 (normally VASCAR). In this case they have

>to give you a 10 MPH grace.

No argument. Try and remain relevant, Davie. One would think that after each and every person reminding you to stay on topic, you would get an inkling.

>"This paragraph shall not apply to evidence

>obtained through the use of devices

>authorized by paragraph (3) within a school

>zone."

>Once again, you demonstrate, to people with

>normal comprehensive ability, that you can't

>understand what you read.

Normal people do not insist roger beeps are illegal after being taught better. Normal people do not prefer to focus on the personal lives of usenet posters, as you claimed you prefer to do. Normal people do ot accuse all they disagree of taking sides with others and conspiring against them. Normal people do not accuse any and all criticism of coming from conspiratorial plotters.

>It's no wonder you jump to the wrong

>conclusions over and over again in the scant 4
>years that you have been polluting this

>newsgroup.

Your heart is on your sleeve through no fault of your own.

>Your pattern of habitual incomprehension is all
>the more apparent if one walks through

>Google for a few minutes.

Ahh,,the inability to exert control to the point you can remain focused has always haunted you. Get some help, Davie, as your predilection of the nuances of poster's lives has consumed you beyond what you can even comprehend.

>This is my last word on the subject.

Well, that IS you pattern throughout google posg history. When it sinks in to your angry and misguided soul that you are wrong on a matter, you abandon the subject like you do your custody issue.

>If you won't take Pa. law as evidence

Oh, everyone takes the law as evidence, Davie, trouble is, your communication deficits prevent you from processing logic and the law, resulting in claims like "Roger beeps are illegal" based on your inability to locate absence of proof.

>that a minimum of a 5 MPH grace exists, then

>that's not my problem. I've been driving for 29

>years now

(snip)

Again, your personal experiences mean nothing. Hell, you hold the time spent in radio as some sort of weird and twisted badge of honor and have said as much all throughout your permitted usenet life among our fine group, but it hasn;t prevented you from the ignorance that haunts you daily and manifests itself in bizarre and unexplained quotes from yourself such as "roger beeps are illegal" .

>I know several cops who confirm this. I could

>name them, but it wouldn't prove anything

>since you don't know them.

Then why bring up the issue? Oh, that's right, because your desperation dictates you need all the false support you can lend yourself at times like this.

>I could just as easily make up names.

.well go ahead, because these imaginary playmates that you told the group not only exist, but agree with you that roger beeps are illegal, should certainly have names.

> is void of radar.

Mine and any company who proposes to sell radar to Pennsylvania, i didnt say they were devoid of radar or a non radar state. I said penns was not a radar state by any means there are states that use radar in every town municipality and boro, penns is not one of them, that means they are not really a "radar state" that is not thier primary means of speed enforcement. Do the state police use em sure do, but there are more towns and municipalities than state police by a large stretch hence it is not really a radar state... Now go twisty some more words around since you dont understand.

NOBODY understands what you say Dave, and you *always* blame it on the
other person, when in fact, it's you.

>Most intelligent people have no problem

>understand what I say.

Oh, that's right, you maintain the majority of everyone else is not
intelligent compared to you. Your anger has resulted in you accusing
three people in one day of not comprehending what you say. With your
confusion over the law, a fourth person came into the mix to try and
gently tell you that you are contradicting yourself, yet you still don't
get it and are blaming everyone who comes into contact with you of not
understanding you. The problem is you, Dave, not everyone else who all
tell you the same thing.

>You problem

(snip)

When you grow up, you
may understand another's world is none of your business, regardless HOW
much you prefer to make them your topic. This is a direct result of your
personal issues.

>I can see why you thought there was a

>contradiction

You *are* a contradiction, Dave,,trouble is, you are the only one unable
to see it, which leads us to the other fact you refuse to grasp: no one
views you the manner in which you view yourself.

>Once again you proclaim to speak for the

>silent majority.

Only they are not silent, Davie, they have been very vocal telling you
for days that you are wrong, hypocritical, void of reason, and
contradicting yourself, yet, you continue to blame each and every one
who tells you the same thing. Issues, Dave, you have a great many.

> A claim that most people find amusing, for the
>sheer narcissistic value alone.

Most people have already schooled you, Dave. Only you see yourself as an accomplished communicator and informed citizen. The rest see you as you have always been informed by these others..as a hypocrite and liar.
-
Your issues lead to you
blaming the other person (not their topic) in all your posts.

>People make mistakes.

>Topics do not.

Attacking people for their mistakes is childish, Davie, and holding that as some sort of justification for your childish acts is just what we would expect from you.

> If someone (like you) acts like an idiot, why

>should the topic be blamed?

As it stands, you are alone in your approach, as a well rounded individual versed in communication knows the person is not to be attacked, the topic is.

>Do you kiss yourself in the mirror in the

>morning, or before you go to bed?

Hahaha,,you really are feeling low, Davie.
Tell us again how you use forensics in your reasoning. Remember, your original calim was that you USED forensics in your reasoning and work,

>That's a lie. I did not state that I "used

>forensics in my reasoning and work".

Oh, brother. You are whacked out, You most certainly did say it.
_
yet when you were instructed by Frank as to the proper usage of the word,

>Frank never "instructed" anything. He merely

>asked if I knew the meaning of the word

>which, of course, I do.

you came back adn (as always) tried to explain what you really meant by misusing the term.
Only then did you say the reasoning you employ is "like" forensics, completely
disregarding your earlier and incorrect claim, yet you refused to acknowledge you were wrong, a pattern that is becoming evident and screamingly obvious in the majority of your posts, regardless who you choose to blame, next.

>Google will prove me right.

Nothing has ever proved you right. Not a thing,

>Go ahead and eat

>a little more crow. That is, if you finished with

>your foot first.

At least you can admit that much.

> but intentionally neglected to cite the part of PA law that
>fully disproved his statement; i.e, paragraph (1).

How can that be? If one part of the law supports it (which you
agreed), and another refutes it, that would be a contradiction.

I believe the word you need to use is "conditional".

Paragraph 1 only applies to cops following someone in a moving car
using a calibrated speedometer. Virtually none of the cops, and the
departments that I know do that. Most use other means of conducting a
"speed trap", and in those cases, the rules I cited fully apply. Your
continuing to argue only makes you look stubborn and either unable or
unwilling to admit your mistake.

>And when confronted
>with this fact he attempted to exonerate himself by claiming he posted
>the link, as if that was enough to excuse his blatant distortions.

There was no distortion. The applicable part was posted. The rest could be had by looking at the link. Paragraph 1 is rarely applicable in this state.

>You defend this behavior?

Why not? It's far more intellectually honorable than what the "axis of obfuscation" is pulling as they try to spin snippets of the law to say things that it doesn't in a vain attempt trying to prove me wrong.

It's funny how you try to beat me over the head with so-called "facts" in political discussions and get steamed when I don't accept your testimony as fact, yet when faced with real factual law, you cannot accept it. Hypocrisy comes to mind.

The simple fact of the matter is that your chances for getting a speeding ticket for less than 5 MPH over the limit is extremely small in the state of Pa..

I don't know anyone who ever got one. Every person, except one, that I know who ever got a speeding ticket has been for 10 MPH or more. The lone exception was a school zone violation for doing 22 in a 15 zone.

That exception is covered under paragraph 4 in 3368 (c).

Other states may be different. I offer no opinion on any states other than the one I live and work in.

>Really, what survey said that?

S9 magazine ran such a survey in the early 80's. It was based on
actual licenses processed (Ham vs. CB), and also took into
consideration that a certain (admittedly hard to quantify accurately)
percentage of CB'ers did not have a license.

This simply defines the "what"," where" and " by whom".

This part of the code does not address enforcement of the speed limit.
That is done in ï¿½3368.

>> That's not the point. Regardless of the accuracy, why would one method

I didn't change anything. I started out by stating that cops had to
give people a 5 MPH grace (in Pa.) to take care of speedometer and
speed measuring inaccuracies. I backed off a little and conceded to
the possibility that this may only be an unspoken "rule" at the
individual cop's discretion. I then located the law which backs up my
original assertion. The subject NEVER changed.

"Conditional"? No, I don't need to add conditions to a statement after
the fact -- a practice you are using more frequently as more and more
of your statements are disproven as stated originally. The terminology

I used in my statement was correct. If you can't comprehend what those
words mean then that's -your- problem.

>Paragraph 1 only applies to cops following someone in a moving car
>using a calibrated speedometer.

Where does the law specifically identify any paragraph (1) device?

> Virtually none of the cops, and the

>in this state.

......"rarely"? I don't recall reading the word "rarely" in your
statement. Here, I'll post it again:

"In Pa. they are required to give 5 MPH to take care of 'Speedometer'
and speed measuring inaccuracies."

Do -you- see the word "rarely" in there anywhere? Or the word
"mostly"? Or "in the great majority of cases"?

Or "almost always"?

>>You defend this behavior?
>
>Why not?

Because it's idiotic.

Yes, but none of the police that I'm aware of use any methods other
than ELECTRONIC means. RADAR and VASCAR, as well as the old tape
strips across the road (which have all but disappeared) are all
considered electronic devices.

Unless you can come up with a "mechanical" or simple electrical speed
measuring device in common use in Pa., then you can't prove that I'm
wrong. You are attempting to disprove the majority of cases, by citing
a small exception.

>
>Vinnie S.

Hi Vinne,
Over the years, I have seen this problem a number of
times, and I found one of the wire wound coils in the back of the
radio was overcoupled, and causing the nasty parasitic you speak of.
You key the mike on SSB, and, after you unkey, there is a full scale
carrier being transmitted... Resetting the bias didn't help, however,
streching the coil, reducing the inductance always worked.
Unfortunately, Its been a few years since I have worked on a HR-2510,
but can tell you it is the coil is all the way in the back, near the
middle, right by the heat sink, and as I remember, parallel to the
rear panel, and has a ceramic cap in front of it, making it a little
hard to strech the coil. After you take the top off, key the mike on
ssb, and when the parasitic shows up, strech the coil until the RF
power meter drops back down to zero. After you do this, the parasitic
will go away forever. I have fixed at least 10 HR-2510s in this

manner, and never had a problem again. One more point worth mentioning though. As I recall, I had at least one or two that the parasitic "went away" when you took off the covers.. You still strech the coil, and this will fix it, however, a little harder to identify the coil... I'm sorry I can't recall off the top of my head which coil it is exactly, but its not hard to find.. If I had a 2510 in front of me, I could look and tell you, but I don't... As there are just a few coils that you can strech, you can do it trial by error, and if you choose the wrong coil, just push the windings back. Anyway, best luck! es 73 Tony..

A car speedometer can be a mechanical device used for measuring speed.
And pacing a speeder is probably the simplest, easiest, most reliable
and most widely used method of catching speeders. That's hardly a
"small exception". And I'm sure that there are other devices that fall
into the category of paragraph (1) or they would have limited the
paragraph to just speedometers.

You need to define this "downward expansion" term, as I've never heard
it. Perhaps it's your version of caps drying out.

>>You might be able to make a believable case that by increasing gain
>>that you might make the audio compressed (driving the AMC too hard

>that you are wrong.

No chance of that happening. And BTW, the caps are on the battery
charger. I'm only drawing about 2 or 3 amps though. I'll have to find
a better load.

>>But you see, that's a bunch of hooey, because VR6 is nothing more than

>
>
>So you're telling me that adjusting the mic gain control on any radio
>that has it doesn't have -any- effect on the quality of the audio?

Other than amplitude, no. It should not affect either the tone or
"compression". Regardless, I tested mine (without even having to
remove the cover (Nice thing about external mike gain). I varied the
control and other than the amplitude level, nothing else changed.

>>That radio chassis, in its various forms was all over my local area 20
>>years ago. Many people hacked them up (as they did with other radios).

>that I'm right. That's pathetic.

There's no point because the adjustment is not that critical as
demonstrated by the Cobra 139XLR and the external "user adjustable"
pot.

>
>
>Who didn't?

Most of the other kids in my neighborhood. They preferred other "non
geek" activities like endless games of baseball/football and
basketball.

I, on the other hand, was rebuilding single cylinder engines and then
moving on to electronics.

>Radio shack sold the kits, and almost every electronics
>magazine published such articles on a regular basis.

Yep. Mine was a 2 tube unit. With a 100 foot wire antenna, I could
cover about 1/2 mile. My first and only experience as a pirate radio
operator, at the ripe age of 11.

>> I've built tube and solid state receivers.
>
>
>From a kit or from someone else's plans?

Other plans. I had to gather my own parts (most of which were
scavenged from other bonepile candidates). That was the nice thing
about point-point wiring of tube circuits. Just punch a few holes in a
piece of sheet metal, and you had an instant "chassis".

>And don't tell me you
>designed one from scratch because I wouldn't buy that for a minute,
>not with your weak understanding of electronic theory.

I never designed a full receiver from scratch (why bother when the
plans for others were already there). But I have designed things like
an op-amp high-pass filtered noise squelch circuit for use with a
president Jackson on FM.

>> I've designed computer
>>interfaces for radio control.

>So you tapped the serial port to run Morse.

Did I say that? No. So why jump to a (wrong) conclusion. BTW, I
despise morse code. No, actually I designed an interface that linked a
Commodore 64 (in 1984) to a Realistic TRC-459, and created an
automated scan/channel/mode/TX/RX control program.

>Whoopee. I had a contract
>a couple years ago where I designed a GPS navigation system for a
>remote-controlled aircraft that is being used for ground penetrating
>radar by a local mining company.

Ooohhh. high level design. Take a few established building blocks and
make them play together. I do that at work.

> Wanna hear what else I've done?

Collecting unemployment, it would seem. Which reminds me, is this yet
another day off? That takes brass when you first start a new job, to
take off so many days, so soon.

>> I built my own repeater controller and
>>homebrewed a DTMF decoder.
>
>
>You "homebrewed" a DTMF decoder? Don't you mean that you bought a chip

>and hooked it up to a power supply and a few externals?

More than a "few" externals. The DTMF "chip" decodes DTMF tones and outputs a non-latching 4 bit binary word. I had to incorporate a binary to 1 of 16 decoder, as well as flip-flops for state latch circuits, and a 555 timer for button time-out.

>>I don't do it much now as the demands of family life, and being a good

What angle are you trying to work now?

If a cop is staking out a posted 55 zone with either RADAR or VASCAR,
they must, by law give you 6 MPH minimum. So you won't get a ticket
for doing 56 in a 55 zone.

I don't think I would be quite so bold as to make that statement. Some
states do have what they call a "zero tolerance" speed limit. But I do
wonder what the rate of success in court challenges are in those
states.

It's one thing to get the ticket. It's another to make it stick.

Most car speedometers are not accurate within +/- 1 MPH

Not as a rule. It takes too much trouble, and are easily spotted.
Those municipal license plates and antennas stick out like a sore
thumb even on unmarked cars.

That is implied. Few things in life are 100% absolute.

Past experience would dictate that I shouldn't even bother with the
diode because I have only seen the problem once in all the amps I have
ever worked on, Peavey or otherwise. So, according to my experience,
the diode is a non-issue. But the design flaw remains, leaving open
the possibility of future failure (which, in a Peavey, is usually
quite expensive). It's just another fault in need of repair.

>>the effect on the audio is just as you described.
>
>You need to define this "downward expansion" term, as I've never heard
>it. Perhaps it's your version of caps drying out.

You can look it up on google. Regardless, it's a term used to describe
what happens to compression -below- the average audio level. IOW, when
you push the average audio level (i.e, mic gain) into compression, the
audio above that level is compressed while the audio below that level
is 'expanded'. When intentional, downward expansion is used for gating
and noise reduction. But when -not- intentional the result is audio
with a very unique quality that could be characterized as "mushy and
compressed" by someone unfamiliar with the effect.

>>>You might be able to make a believable case that by increasing gain
>>>that you might make the audio compressed (driving the AMC too hard

>>>might do that), but reducing the gain? C'mon Frank, you might be able

>remove the cover (Nice thing about external mike gain). I varied the
>control and other than the amplitude level, nothing else changed.

It would depend on where compression begins. For CVA circuits it
usually begins quite low. For limiters it will be high. Regardless,
there was a noticable difference in my TRC-449 (which still has the LP
filter intact).

>>>That radio chassis, in its various forms was all over my local area 20
>>>years ago. Many people hacked them up (as they did with other radios).

Absense of evidence, Dave. When are you going to learn that
fundamental concept?

>Besides, for someone who supposedly got a "new job", you seem to be
>putting in a good amount of time yourself.

I would think that you would be more careful with your assumptions and
speculations lately -- but then again, perhaps not.

More conditions, Dave? You didn't say anything about RADAR or VASCAR
in your original statement. Or are you just playing dumb again?

>>>using a calibrated speedometer.
>>
>>
>>Where does the law specifically identify any paragraph (1) device?
>
>How many other "mechanical" speed devices, still in use, do you know
>of?

Well, there's a neat little mechanical device that was invented even
before the automobile that does a very good job at measuring speed.
It's called the 'camera' (no batteries required). When the shutter is
set for a specific length of exposure and the distance from the camera
is known, then the resulting blur can be measured to determine the
speed of an object. I would guess that cameras are used in other ways
as well. Regardless, you avoided the question: Where does the law
specifically identify any paragraph (1) device? And what was the name
of your tech school, Dave?

>>> Virtually none of the cops, and the
>>>departments that I know do that.
>>
>>
>>Cops in PA don't pace speeders?
>
>Not as a rule. It takes too much trouble, and are easily spotted.
>Those municipal license plates and antennas stick out like a sore
>thumb even on unmarked cars.

So if I were to contact, say, a hundred people in PA that have had
speeding tickets in the past year, almost none of them would say that
they were popped by a cop pacing them in their blind spot? And since
they don't use their speedometers to ticket speeders, the high-tech
cars with the video cameras have all the speedometer data recorded on
tape only for posterity?

>>> Most use other means of conducting a
>>>"speed trap", and in those cases, the rules I cited fully apply. Your

In this case it's common sense. No gives a 1 mph speeding ticket, not
even in a school zone.

AES in Wickliffe, OH did this for a while in the late 1980s, but they
may have discontinued the practice.
There was also a hamfest in Pittsburgh that had a license requirement
to claim any radio prizes. If you didn't have a license, you got cash.

They do some smaller speed-traps here in WA. I can't remember if it
was Bellingham or Chelan, but one of those two towns has speed boards
in the school zones, and you better be driving -under- the speed limit
or they'll pull you over.

They'll take a check or credit card too. It's not at all difficult
to buy whatever you desire, license or not.

That's covered in part D, as I noted in an earlier post. But the fact
remains -- contrary to Dave's statement, you CAN get a speeding ticket
in PA for going 56 in a 55 zone.

Man, I'd take a 1 mph speeding ticket to court every time, wouldn't you?

I'd lay odds on me getting it tossed, and the cop being bitched out
by the magistrate too.

I did answer the question, and quite a long time ago.

My turn:

I have not strayed from my position against illegal radio operation.
But for some reason you have recently decided to turn your agression
towards me, and it's usually when Dave is getting severly raked over
the coals for his arrogance, ignorance and/or downright stupidity. So
what is the motivation behind your recent attacks -- are you defending
Dave's ignorance? or do you think that I've secretly defected over to
the dark side?

I don't know..... I've driven through a lot of small towns and some of
them are real anal about anyone breaking their local ordinances. Some
places even have signs under the speed limit marker saying "Strictly
Enforced", and around these parts that's usually the truth. Even
Spokane has "emphasis patrols" that they publicize on the news
-before- the fact just to give people warning, but they end up writing
gobs of tickets anyway. So as far as I'm concerned, if the speed limit
is 55 I'll stay below it so there won't be any doubt.

AFAIK, there's no rule requiring a license to BUY
equipment. There are rules about using it though.....

Some might ID by mistake out of habit before they realize that
they are out of band.....

WOuld it be illegal to use my callsign as my "cb handle" on
CB using legal CB equipment? Or would I be using my ham
license out of band? Not that anyone would really care, but....

I've heard second hand of hams, bored of regular ham bands,
doing "freeband" for a change of pace.

I picked up an 8558 a couple of years ago.....nice unit. I did hear
mention of an RF voltmeter.....this is handy if you are aligning the
PLL or the low level exciter stages, but a 'scope does fine.

Pete

>Tony..

I will take a look. Togerbird also emailed me, and said to put a mica insulator between the final and chassis. Since the transistor was not using the chassis as common, having it ground to the chassis causes this problem.

Here is his comment:

"You need to add an insulator between the final and the Heatsink.
Simply unscrew the final mounting screw, and you should be able to slide a mica insulator between the final and heatsink.

Make sure to use heatsink compound on both sides of the insulator.

Now for the reason: Uniden chose not to use an insulator. The mounting tab of the final is Power ground. (emitter)
The heatsink is Chassi Ground. Connecting the final emitter to chassi ground (at the mounting Screw) can sometimes cause an RF Ground loop."

Anyway, I will take a look at your solution too. Thanks.

Vinnie S.

It's the MO with 2 or 3 ham radio jagoffs that enjoy harassing anyone
that will pay attention to them.

If we set a filter for google-groups posts they'd all but disappear.

Oh, it almost would be tossed, but how much time
did you spend? How much pay did you lose?
It all adds up, that's the reason an A-hole cop
would write you a ticket like that.

Yup. My dad in 1971 in his Cadillac El Dorado going
over the Donner Summit, 66 in a 65 zone, by CHP.
My mom going over the San Mateo Bridge 56 in a
55mph zone, CHP.
My mom was furious, she had never gotten a ticket
before or since then, she's strict law abiding person
while driving. She went to court and lost, the judge
had said if she showed up with a certificate showing
her speedo was off and it was repaired, she would have
been found not guilty, but she didn't know that crap.

A 25 year old survey? Don't you think things might
have changed just a little bit since then? Just a little?
I mean come-on, there's not even half the amount of
cb'ers on the air today compared to back then.

I didn't, you said that cops don't write tickets for 1 mph over
the speed limit, you didn't clarify yourself until a number of posts later
after you were called on it.

>
>>> I live here, you would think I'd have a little more knowledge in this
>>> area, than someone who lives 2000 miles away.

Just because you live there doesn't make you anymore or less
knowledgeable on anything state related. You could be a State
university professor on agriculture, but does that make you

a person of knowledge on traffic laws?
If you claimed to be a police officer, justice of the peace,
lawyer it might carry more weight, but one can research the
internet just as easy as you and find all sorts of state laws
regard the subject of traffic enforcements.

>>
>>Nope, that method was dropped in the late sixties in Ca.

>>> It is correct. 3368 (c) (4) says so in the great majority of cases.
>>
>>This all started when you said that you won't get a ticket for
>>going 1 MPH over the speed limit. You then changed the subject to that the
>>Cops won't do it because their equipment & laws
>>governing that allow for a +/- grace.
>
> I didn't change anything. I started out by stating that cops had to
> give people a 5 MPH grace (in Pa.)

NO, you did change it. Originally you posted:

"That depends on the state. Some states (I believe Maryland is one) have
what they refer to as "Zero tolerance" 65 MPH. They can bust you for 66, or
so I've been told. I don't know how many cases have been fought over
speedometer or other potential speed inaccuracies and how well the "zero
tolerance" aspect has held up."

No where did you say Pa. in that post. Then a couple of post
later you posted with a statement that it was an unwritten rule
that in Pa the officers had to give you a grace speed. Then a
post or two later you stumbled upon the law that you are clinging too as
gospel, that's when you changed the parameters
to suite yourself.

> to take care of speedometer and
> speed measuring inaccuracies. I backed off a little and conceded to

Keep a hold of that piece of paper, because make
sure to take it with you when you go to court. Take that
day off, loose that pay just to fight a stupid ticket.

Keep that focus dude, it's a bitch to get older......
Going in to get glasses on Saturday.
Watch out for that Brown truck on Sunday, Harvick
& Rudd are the ones I'll be watching.

Yup, my dad was pissed because it was only a 1mph over.
My mom's gig was complete BS, but you know as well as I,
sometimes it doesn't matter to the courts, it's revenue you
know.

Did you watch Harvick wreck Johnson in the 125's today? That plate
racing sucks unless you enjoy the high-speed wrecks.

That's not racin'.

Nah, was working. It sometimes can get boring, but
when they start doing some fancy passing, that's when it
peaks your attention.

Holy crap, that might have done it. While I did not spreak the coil, it appeared to be pushed or slanted to one side. I just straightened it out a bit. Seems to work. Will still do alignment. I will get back to you !

Nope, never. But try telling that to those who insist on arguing the
point.

Some states may handle things a bit differently, but at least in Pa,
the vehicle code actually contains verbiage that addresses specific
speed tolerance.

Once again, you are trying to take a relative situation and trying to
make it into an absolute. You're trying to disprove the valid point
which applies in the majority of the situations, by a statistical
minority.

While there might be a greenhorn rookie cop, who's out to make a name
for himself as a hardass, and might try to pull stuff like that. But
it won't take long before he gets tired of appearing in court only to
have the cases thrown out.

The law is clear and it applies to the great majority of cases and
situations, as well as the majority of the speed measuring equipment
used by PA. cops.

My statement stands. Cops will give at least a 5 MPH grace for
speeding violations.

Small exceptions do not invalidate the rule.

>in your original statement. Or are you just playing dumb again?

I didn't think I had to spell out every single condition. I figured
(evidently incorrectly) that most intelligent people are aware of the
common speed checking devices in normal use.

The law is clear. Experience and common sense covers the rest. What's
left is a small number of cases which does not invalidate what I said
for the great majority of cases.

It's not an all or nothing world we live in Frank. Stop treating it as
such.

Wrong. You made a definitive statement that was wrong and are now
trying to squirm out of it by adding conditions and claiming that
something else was "implied". That's a Twisty-tactic.

> You're trying to disprove the valid point
>which applies in the majority of the situations, by a statistical

Your statement mentioned nothing about statistical probability.

>While there might be a greenhorn rookie cop, who's out to make a name

>The law is clear

Yes it is. It states that leeway must be given when the measuring
device is electronic, but that leeway -doesn't apply- for measuring
devices that are mechanical or electrical. It's yet another in a long
list of facts that you refuse to accept.

> and it applies to the great majority of cases and

ANY exception is enough to invalidate your statement, Dave.

Exactly. That's the meat of the point. Most people understand that.
That's why most experienced cops don't even try to write them. But
Frank just wants to argue because *I* made the initial statement. I
could say that the sun sets in the west and he'll argue the point.

He just doesn't like the fact that I am a proud conservative
republican......

Once again, you didn't say "for the great majority of cases". You said
they are "required" to allow some leeway, and you gave no conditions
under which that rule may not apply.

>It's not an all or nothing world we live in Frank. Stop treating it as
>such.

You made the claim, Dave, not me.

I also specified "still in use". I know of no camera in use to clock
speed in the state of Pa.

> I would guess that cameras are used in other ways
>as well. Regardless, you avoided the question: Where does the law
>specifically identify any paragraph (1) device?

It doesn't. But considering the fact that there are few strictly
mechanical speed measuring devices available, the choices are limited.

Just because a cop CAN use a mechanical device, doesn't mean that they
do. There's theory and there's practice. You're trying to argue based
on theory, I'm basing my points on practice.

>>>Cops in PA don't pace speeders?

Go for it. Be sure to provide verifiable data. And make sure you find
out if they were popped for less than 5 MPH over.

> And since
>they don't use their speedometers to ticket speeders, the high-tech
>cars with the video cameras have all the speedometer data recorded on

>tape only for posterity?

You are asking me to speculate about all the possible uses for that information. I'm not about to do that. Mostly the video cameras are to provide evidence that the cop acted "appropriately" during a car chase or stop. Beyond that and you're speculating.

>>That is implied. Few things in life are 100% absolute.

I don't argue facts, Dave. But alas, you rarely provide any facts. I
do, however, argue your assumptions and speculations; for example:

>He just doesn't like the fact that I am a proud conservative
>republican......

That's nothing more than speculation. I can tell you were never really
paying attention to our political discussions, because if you had you
had you would know that my point was to teach you how you and other
conservative republicans were suckered by the Rove administration.

But you just keep making inaccurate statements based on conjecture,
unsupported by facts, bolstering your "core beliefs".

I have yet to "raked" over any coals. Just because you argue with me,
(and manage to look pathetic doing it as in this case of speed
tolerance) does not make me wrong.

>So
>what is the motivation behind your recent attacks -- are you defending

It's no secret. Your axis has shifted. Instead of referencing
legal/illegal radio, it's now based on political affiliation.

Dave
"Sandbagger"

It's based on the fact that you initiated this discourse, argue your
positions without regard to facts or logic, project your deficiencies
on me, and are so arrogant that you can't admit when you are wrong
even on the smallest, most insignificant issues. No, my axis hasn't
changed -- it only seems that way ever since you started providing me
with a closer look at your hypocrisy.

>No I dont like your tactics,

And I don't like yours -or- Dougs. But I don't attack you for it, and
I don't defend anyone against them. If you get into an argument with
somebody then it's between you and them, not me. I stay out of it. You
should do the same.

> Dave is not a bad guy,

Of course he isn't. If he -was- a bad guy he would be in the killfile.
He has great potential, he's just a little mixed up right now.

> your now doing the
>twisty charade of telling people what they meant. It is your method that
>has me defending Dave, and In fact i agree with much he has to say, he
>doesnt lie in my opinion. Just because you dont agree with him re:
>politics, and I know you will have some excuse of daves behaviour or
>whatever other ryhme or reason. I dont buy it Frank.

I have agreed with Dave on many things, including politics. But it's
not that I disagree with the other issues so much that many of his
opinions, right or wrong, are founded on misinformation, propoganda,
or poor qualitative reasoning skills. For an intelligent person like
him (or yourself, for that matter) to fall back on "core beliefs" as
an excuse to dismiss facts and logic is bogus, and it undermines the
credibility of any argument against keyclowns who use the very same
tactics.

> I never fooled with
>you before Frank we both co existed when I see you attack someone and use
>the same tactics as twisty someone you have been round and round with,

I have adopted -some- tactics used by Twisty, as well as from others in this newsgroup from all three sides of the fence. I have also -rejected- some tactics used by Twisty, such as his pop-psychology and his diversionary topics game (the latter, BTW, is being used by Dave quite frequently these days, so if you are going to admonish me for using Twisty's tactics then you should do the same to him). I also have rejected many of -your- tactics, such as attacking those who support or defend another -- otherwise, both Vinny and yourself would be included in the scope of this discussion. But you aren't because my discussions with Dave have nothing to do with either of you. And frankly, I'm a little disappointed that Dave hasn't asked you to butt-out because he is capable of speaking for himself.

>sorry I wont sit idle.... btw I am dave Hall.......
<snip>
>Just ask Twistedhed

Do what you have to do, and so will I.

>zone.

I dunno know about that. From what I can read, it's called "Zero
Tolerance" and has been practiced in just about each state at one time
or another. I found several articles referencing it in California on the
very first search, especially San Francisco to Reno.
Also, check out Waldo or Lawtey in Florida along with Speedtrap on
google. They are the nations only designated speed traps by AAA AND ABC
National News. Peter Jennings did a story, as did numerous other
media....check it out. Waldo most certainly hands tickets out for what
you would THINK is ridiculous speeds. But wait.....the majority of those
ticketed are out of state drivers, as 301 is a main artery for vehicles
from 95 coming to the west coast of Florida. So when the ticket is
received,,your ONLY recourse, is coming back to Florida to fight the
ticket in this back, jerkwater town, or paying it. Care to guess what
happens in just about every single ticket ever written in this town?
Lawtey is the same way.

Only a "lean"? Considering the large disparity between the number of
hams/CB'ers, there would have to be a very high percentage of hams who
disregard the rules. I'm not sure I'm ready to buy that just yet.

Well, I'm sure that there are a lot less people on CB. But the ones
who left, for the most part, were not the true radio hobbyists. Those
were more of the casual "social fad" users. Based on my own personal
experience, I'd be willing to bet that most of the CB'ers who are
currently on the air have some sort of freeband capability.

Ham radio has grown as well, but not in leaps and bounds. It's harder
to attract young people to ham radio when there are so many more new
technologies to sink their teeth into.

Cops do not, as a rule, write tickets for 1 MPH over. It's too hard to
make them stick here, and they are specifically prohibited by law to
write them when using electronic speed measuring devices, which is the
great majority of the time.

I didn't think I had to pick nits about minute little details. If one
person gets a ticket (and is too clueless to fight it) for 1 MPH
over, it does not invalidate the fact that the rest of the people
didn't.

>>>> I live here, you would think I'd have a little more knowledge in this

>a person of knowledge on traffic laws?

Bad analogy. I live here, and am bound by the laws here, so I have an
incentive to know them. Likewise, you live in California, and you have
an incentive to know the law there. I would not even begin to try to
tell you what the law in California is. Sure, I could access statutes
on the web, but that does not reflect the attitude of the LEO's and
the people of the area which adds a little color to an otherwise black
and white rule.

> If you claimed to be a police officer, justice of the peace,
>lawyer it might carry more weight, but one can research the
>internet just as easy as you and find all sorts of state laws
>regard the subject of traffic enforcements.

I know cops here. I'm personal friends with 6 of them. One of them
(retired now) is a partner in our ham radio repeater. They tell me how
they do things. I tend to believe what they say. After all, they are
doing the job of enforcing the rules.

Try researching other sites such as:

http://www.berksweb.com/users/dmv/padriving.html

Which exposes all sorts of loopholes in the law, which can be used to
"beat" a traffic ticket. When you understand this (PA. has some
strange laws), your perspective might be a little different.

>>>Nope, that method was dropped in the late sixties in Ca.

>
>http://www.jesbeard.com/s12.htm

Interesting link. Thank you for posting it. It would seem that
California is just as weird (in a different way) than Pa. Judging from
that link, they consider many methods of speed timing, in which the
speeder is not aware, to be a "speed trap", and illegal in California.
Interesting since the term "speed trap" is a common term here and is
widely accepted as "just the way things work".

>>>>>> All that shows is that states vary in their methods toward traffic

No, not in THAT post. That post followed my original post where I
stated that they give 5 MPH to account for inaccuracies.

> Then a couple of post
>later you posted with a statement that it was an unwritten rule
>that in Pa the officers had to give you a grace speed.

I backed off a little because I didn't (at that time) have the exact
verbiage of the law in front of me. Knowing how literal some people
are on here, I decided to play it safe and call it "discretionary".

> Then a
>post or two later you stumbled upon the law that you are clinging too as
>gospel, that's when you changed the parameters

>to suite yourself.

Well the law is the law..... Bummer that it deflates the egos of those who have now made it their life's mission to prove me wrong at every turn.

No, I returned to my earlier assertion that they are required to give a 5 MPH grace (Turns out my memory was not so foggy as I suspected), when they are using the most probable methods of timing speed currently in use in Pa.

I was first made aware of this "law" when I was studying for my driver's test in 1976. In the little book that they gave us to study traffic law, it stated that 61 (in a 55 zone) was the point where a citable violation would occur. But some here do not take someone's word, so I needed more definitive "proof". I have since gotten it, yet some are still attempting to argue the point.

>>>You are wrong, speed limits do not have a grace
>>>"well your honor, here's the law stating that he has to give me
>>>a grace of 6 or so MPH over the speed limit"
>>>Judge "Really? OK, here's a fine of 200 to 250 for going
>>>6 or so MPH over the speed limit"
>>
>> Pa. ï¿½3368 (c)(4) would seem to disagree with you.
>
> Keep a hold of that piece of paper, because make
>sure to take it with you when you go to court. Take that
>day off, loose that pay just to fight a stupid ticket.

I'm a salaried employee. I wouldn't lose any pay.

Why are you so sure that I'd lose? Why do you not believe the law as it is stated?

If a cop times me (or anyone else) with any of the popular electronic measuring methods, the law clearly states that they have to allow at least 5 (and sometimes 10 under certain conditions) MPH to account for inaccuracies. The chance that I would be "timed" by a simple mechanical device (and therefore potentially exempt from the 5 MPH exemption), is about as great as my getting hit by lightning. I've almost been struck by lightening (a strange feeling in itself). I've never gotten a speeding ticket.

Even when using a mechanical device, which is supposedly exempt from the 5 MPH rule, based on what my cop friends tell me, the cop will likely still not pull anyone over until at least 5 over. They just don't want the hassle of going to court, which is a lot more likely with such a small degree of violation. It opens all sorts of accuracy questions. Since an automotive speedometer is not required to be calibrated, you cannot be held responsible if it's not (how would you know?). If you go to court with proof that the speedo is off (and had it fixed), chances are you'll walk. Cops hate going to court. They

like it even less if their case is tossed.

If 99% of people have 2 legs, does the fact that 1% of the people do
not, diminish the accuracy of describing a human being as a biped?

I don't know anyone who ever got a 1 MPH over ticket. That does not
mean that it can't happen. But it's clearly the exception, not the
rule.

My statement is true in the majority of cases.

Be careful if you choose to insulate the transistor from the heatsink.
Be sure to use a plastic screw (or a smaller metal screw with a
plastic washer), or you won't really be insulating it.

You are correct, there is no such written rule. However some merchants
take it upon themselves to enforce this "rule". IMHO, if they make
enough money that they can afford to turn away potential customers,
more power to them. Most ham stores though, aren't exactly busting at
the seems with buyers......

Many hams used to be CB'ers/Freebanders, and like to "return to the
roost" once in a while.

Yet, you said David T. Hall Jr. (N3CVJ) gave you specific permission in
a private email between the two of you to forge him in this group in
order to make another "think" you were him. In addition to polluting and
prostituting the group for your own childish games, you admittedly
collude with David T. Hall Jr. to cause intentional strife to the pages
of rec.radio.cb. Then again, you two of you have been at it for quite a
long time. You're both loser lids.

> I'm a salaried employee. I wouldn't lose any pay.
>
> Why are you so sure that I'd lose?

I never said you would lose. I said that you lose
because you have to take time off of work, lose
pay (or in your case, the company loses productivity
of one of it's workers), all to deal with a BS ticket.

> Why do you not believe the law as
> it is stated?

Because, if you break a vehicle code, no matter
what YOU say, a cop can write you a ticket.
Whether or not he's right or wrong he can still
ticket you. Then you have to take the time out
to deal with it or pay it, which most people would
probably do in society today.

>
> If a cop times me (or anyone else) with any of the popular electronic

Lucky you, I'll admit I've had close to a dozen, but all that done in my
late teens very early 20's.

>
> Even when using a mechanical device, which is supposedly exempt from
> the 5 MPH rule, based on what my cop friends tell me, the cop will
> likely still not pull anyone over until at least 5 over. They just
> don't want the hassle of going to court, which is a lot more likely
> with such a small degree of violation.

Who's says he has to go to court? If he wants to write
you he can, if he wants to go to court he can, if it's
a BS ticket, he'll ignore the court date and the case will
be dismissed, but YOU still had the hassle just because
you went 1mph over the speed limit.

It opens all sorts of accuracy
> questions. Since an automotive speedometer is not required to be
> calibrated, you cannot be held responsible if it's not (how would you
> know?). If you go to court with proof that the speedo is off (and had
> it fixed), chances are you'll walk. Cops hate going to court. They
> like it even less if their case is tossed.

Of course they do, especially if they think their right.
If he wants to just boost his quota, there's the answer.
You say you know some cops, I have stated before and
say it again, I have family that are cops and the mentality
is pretty amazing depending on the type of department they
are with.

Well I'm done with this thread, you keep believing
that cops don't write tickets for 1mph over (even in your
state dude, no matter what you think), I know they do.

Have a good one.....

>does the Sams spec compare to the factory spec?

Not odd at all. Both radios use a dynamic stock mike, with about a
600 ohm impedance. The output of such a mike is pretty consistent.

I do not have the factory specs for this radio as it was made in 1971.
The SAMS is as good as it gets, and consistent with other radios.

>with a very unique quality that could be characterized as "mushy and
>compressed" by someone unfamiliar with the effect.

In other words a reduction of dynamic range.

Ok, I found the term. It would seem that the term is used primarily in
the recording industry (Which explains why you know it so well). Your
explanation is valid, but for downward expansion to be applicable,
the audio must be already driven into compression, which it would not
be the case at 50% modulation. It is also not applicable in the case
of this CB, as the VR6 pot is after the mike compression stages.
That adjustment does not affect the amount of audio compression that
might occur before the pot (As a result of the TR18 and 19 mike AGC).
So it has no effect on the amount of compression the audio may have at
that point. The AMC clipping (compression) happens after VR6, but at
the time the 50% modulation point is set, the AMC is adjusted to
maximum so it should have no effect.

>>No chance of that happening. And BTW, the caps are on the battery
>>charger. I'm only drawing about 2 or 3 amps though. I'll have to find

Any compression downstream of the VR6 pot would be the result of the
AMC circuit where D21 and D22 are the variable attenuators (clippers),
which should have been adjusted for max when setting the 50% point.

Hmm.. The words "Welcome to Wal-Mart" don't apply to your new job do
they?

Not that there is anything wrong with anyone who's gainfully employed.
But most engineering jobs follow a fairly regular 40 hour full time
work schedule. Note the use of the word most, to avoid the mistaken
appearance of another absolute.

>Which chip are you talking about?

That would be "chips", as there were about 6 or so. I don't remember
exactly as I built it in 1988. But I still have it in the bin at home.
I retired it after splurging on a fancy bells and whistles voice ID
controller.

That may be true in many states (Like I said, I believe Maryland is
one) but not, as a rule, in Pa..

the presence of 3368 (c)(4) pretty much negates any notion of "Zero
Tolerance". Zero Tolerance is exactly that. There would be ZERO
exceptions.

My statement from a few posts back:

"Projection has really become your defense of choice. Accuse others of sock paranoia when you blatantly display it. Accuse others of "communications deficits", when you can't understand plain English words. Accusing others of not having any support, when you have never gotten a single vote of confidence on any of your deluded points".

Your statement:

> Projection has really become your defense of choice.
> Accusing others of sock paranoia when you blatantly display it
> and Geo admits forging you is our folly.

You can't even be original. THAT is your folly, and our entertainment.

No, I did not. I stated that they have to give 5 MPH for measurement
inaccuracies. The fact is that they do. The fact that it is not 100%
across the board does not invalidate what I've said.

> and are now
>trying to squirm out of it by adding conditions and claiming that

You should have learned by now Frank, few things in life are absolute. Most things are relative or conditional. For you to assume the absolute case is your problem not mine.

>> You're trying to disprove the valid point
>>which applies in the majority of the situations, by a statistical
>>minority.

>Your statement mentioned nothing about statistical probability.

I made a blanket statement which is true in the vast majority of cases. You are claiming I'm wrong based on a potential minority of cases. Who's being ridiculous here?

>>While there might be a greenhorn rookie cop, who's out to make a name

>
>
>ANY exception is enough to invalidate your statement, Dave.

No it's not, as I never used the words "all", "100%", "always", "never", or any other word that precludes any possible exception. I spoke for the majority of cases. In that case, my statement is correct.

Most poor debaters,who cannot rationally counter the point, tend to
use ad-hominem tactics to attack the opposition's methods instead.
This case is no different.

Calling my analogy "bad", simply because you can't counter it is
especially revealing.

I didn't think I needed to. Most people understand that statements are
not universal, unless expressly noted, and based on the majority of
cases.

Had I said that the police are required to give 5 MPH in ALL cases,
you would have proven me wrong as it only takes one contrary case to
prove an absolute statement wrong. That's exactly why I avoid
absolutes.

You seem to feel that I should qualify my statements as not absolute.
I feel the opposite. It's the "glass is half full versus half empty"
comparison.

I am glad to see that your person crusade to trash me has pushed you
into researching sites that you otherwise would have no interest. I
hope the experience has been educational. But after all that trouble
it must be a bit disappointing to find that in addition to
aforementioned speedometers, that a common stopwatch is the only other
mechanical device you could find.

Considering that a stopwatch has to be stopped and started manually,
how long do you think a 1 MPH over ticket would last in court when you
consider the error introduced by reaction time? A stopwatch suffers
from the same basic limitation that VASCAR does.

But keep digging. It's fun to watch you grasp at straws.

>>Just because a cop CAN use a mechanical device, doesn't mean that they

When I speculate on something, it is based on either knowledge of, or
experience in, a particular subject. You may (and seem to be making a
habit of) dispute my knowledge and experience, but that's another
matter. When I have no solid information about a subject, I will not
speculate about it

I enjoy my study of human behavior. It's fun to watch people fit into certain categories. Sorry if the truth hurts certain insecure and narcissistic people.

> I also
>have rejected many of -your- tactics, such as attacking those who
>support or defend another -- otherwise, both Vinny and yourself would

>butt-out because he is capable of speaking for himself.

This is a public forum not e-mail Frank. Everyone is welcome to participate. If you wanted a private exchange to honestly discuss methodologies, you could have e-mailed me at any time. The fact that you chose instead to attempt to belittle me in a public forum invalidates any right you may claim to exclusivity in these discussions.

Well, yea, I guess someone loses. That's why in Pa, the cops wait
until the offense is serious before they issue the ticket. Most people
will be less likely to fight a ticket when it's 10 MPH over the posted
limit. The common defenses start to dry up at that point.

>
>> Why do you not believe the law as
>> it is stated?
>
>Because, if you break a vehicle code, no matter

If that were true, then 3368 (c)(4) would not be necessary.

>Whether or not he's right or wrong he can still
>ticket you. Then you have to take the time out
>to deal with it or pay it, which most people would

Most police department supervisors will "get on" the backs of
patrolmen who habitually write "bad" tickets. It reflects poorly on
the department.

I had the misfortune (or fortune in retrospect) of having a grossly
underpowered car during my formative driving years. It made really
speeding a bit more difficult.

Ok, I think I see where you are going here. But if the cop
deliberately ignores 3368(c)(4), then he will be in line for a talking
to by his superior.

> It opens all sorts of accuracy
>> questions. Since an automotive speedometer is not required to be

No argument there.

> Well I'm done with this thread, you keep believing
>that cops don't write tickets for 1mph over (even in your
>state dude, no matter what you think), I know they do.

If they do here, unless they use an approved mechanical device to measure speed, then they are in violation of 3368(c)(4). Sure I guess they COULD still do it, but most are not so ignorant/arrogant/desperate.

I got my start in radio with a legal CB radio back in 1976.
Then got a ham license and never went back. If I wanted
to "freeband" I can legally use the 10 meter band as a ham
for the same operations. But with the sunspots out, I
can use 20 or lower just as legally.

>That should stroke Dave's ego a little bit -- he needs it right about
>now.

Frank, I have nothing against you or Dave. Dave has helped me quite a lot. I
appreciate that, who ever the person is that helps me.

But I would like to point out one thing. There in an underlying feeling in this
group, that there is some sort of prize, if you know more than someone. Almost
like there is a contest to one up someone else. I just don't get it. Are people
that insecure? With a couple of killfiles, I have cleaned most of the garbage of
this group. I don't kill file you or anyone, that can be informative or helpful.
Regardless of what side of the line you fall on.

But this is a perfect example. Dave did nothing but try to solve a problem for
me, and you take a swipe at him. Maybe you know more than him, or maybe he knows
more than you. But once you leave the area of the keyboard, who the hell really
cares? Does you wife care, do you friends care? Probably not. So why is it so
important that everyone here knows?

That would have been the last try. I was going to bias as soon as a DMM came in
thru mailorder. But this coil think blows my mind. I still am not sold there
isn't another problem. I barely moved the thing, but Jim was right. It made
enough of a difference.

Sorry Shark..it would make any cop a laughing stock if he did that. If he wrote me a 1mph ticket, I'd be sure to find some time to stalk him at the courthouse and call him Barney Fife several dozen times a week.

Paybacks are a bitch.

Don't matter. I still need it. Mostly for current. My company DMM doesn't measure current. But it appears everyone is right in some sense. I have narrowed it down to the back area, by moving and removing the cover.

I find it just good practice to keep records of all my work, and those
records include any bad parts (assuming the customers don't want them
back, which hasn't happened yet). I even kept that diode from the
Peavey. Keeping bad parts (with a record of what equipment they came
from) helps to identify low-quality components and manufacturers,
gives me a reference for comparison to suspect components, etc. There
are several other reasons, and I find a new reason every now and then.

>>>>There is no contradiction in my statements at all. There is a fault in

>>does the Sams spec compare to the factory spec?
>
>Not odd at all. Both radios use a dynamic stock mike, with about a
>600 ohm impedance. The output of such a mike is pretty consistent.

That's interesting, since I have dynamic mics with impedances from 100
to 50k ohms, and with output levels from -60 to -10dB. The stock mic
for the TRC-449 is 600 ohms but the output level is not specified. Are
they specified for the Midland?

>I do not have the factory specs for this radio as it was made in 1971.
>The SAMS is as good as it gets, and consistent with other radios.

Yet radios have their differences.

>>>>Actually it's called 'downward expansion', as I stated previously. But

>>>
>>>You need to define this "downward expansion" term, as I've never heard
>>>it. Perhaps it's your version of caps drying out.
>>
>>
>>You can look it up on google. Regardless, it's a term used to describe
>>what happens to compression -below- the average audio level. IOW, when
>>you push the average audio level (i.e, mic gain) into compression, the
>>audio above that level is compressed while the audio below that level
>>is 'expanded'. When intentional, downward expansion is used for gating
>>and noise reduction. But when -not- intentional the result is audio
>>with a very unique quality that could be characterized as "mushy and
>>compressed" by someone unfamiliar with the effect.
>
>In other words a reduction of dynamic range.

No, a reduction of dynamic range is called compression; i.e, the
dynamic range is compressed. Expansion is just the opposite. (And yes,
I can hear you whining already: ".....that's a contradiction, Frank!
So before you get bent out of shape, notice that 'expansion' is not
the same as 'downward expansion', as the latter can occur during

compression -or- expansion.)

>Ok, I found the term. It would seem that the term is used primarily in
>the recording industry (Which explains why you know it so well). Your
>explanation is valid,

No kidding.

> but for downward expansion to be applicable,
>the audio must be already driven into compression, which it would not
>be the case at 50% modulation.

Wrong. This is a classic case of how screwing up one thing leads to a cascade of consequences......

If the reference level is intended to be 0.5mV but you feed it 5mV then you are forced to compensate by decreasing the gain of the mic amp. Because the mic gain is low, you need to drive the mic with more audio (literally, ten times more audio power) in order to push the radio to 50% modulation. But in order to drive the output of the mic higher you must either talk louder or move the mic closer to your mouth. Assuming that your subconscious mind made the compensation automatically (as the subconscious mind usually does), you moved the mic closer. But your conscious mind failed to consider one of the basic characteristics of the dynamic mic -- when you move the mic closer to your mouth you increase the spectral lows -much- more than the highs. So by changing the audio equalization you subsequently screwed up the proper operation of the AMC, because lower frequencies have a greater power level and will subsequently drive the AMC into limiting more often than normal.

The net effect was a combination of reduced mic sensitivity and increased AMC limiting; i.e, a nearly textbook case of downward expansion, with some extra 'mush' due to the AMC limiter working overtime.

Yet you, after 35 years of loud-n-proud expertise in the biz, didn't realize what was really happening, didn't care to find out, and jumped to the conclusion that the best way to compensate for the increased low freq response was to bypass the low-pass filter. Didn't anybody ever teach you that two wrongs don't make a right?

If you set the mic gain properly then you don't need to hold the mic with your teeth, the mic isn't overdriven, the spectral response of the audio is normal, there is no need to bypass the LP filter, and the AMC works as intended.

> It is also not applicable in the case
>of this CB, as the VR6 pot is after the mike compression stages.
>That adjustment does not affect the amount of audio compression that
>might occur before the pot (As a result of the TR18 and 19 mike AGC).
>So it has no effect on the amount of compression the audio may have at
>that point.

TR18 and TR19 make a clamping (hard) limiter, not a compressor or AGC.
Notice the configuration of the transistors -- the gain is very high
and the pair behave almost like a switch that's turned on when the
audio is high enough to get past the forward voltage drop of D20 and
turn on the switch.

> The AMC clipping (compression) happens after VR6, but at
>the time the 50% modulation point is set, the AMC is adjusted to
>maximum so it should have no effect.

That's so the AMC won't have any effect on the modulation while
setting the mic gain.

>>>No chance of that happening. And BTW, the caps are on the battery
>>>charger. I'm only drawing about 2 or 3 amps though. I'll have to find
>>>a better load.
>>
>>
>>What is the AC across the caps?
>
>Are you referring to the amount of ripple?

I am referring to what the meter reads when you switch it to AC and
put the probes on the leads of the cap.

> If so it's about .5V.

Well that's no good. Do you have more than one cap hooked up at the
same time? What are the ratings on the cap? You do realize that the
purpose is to -make- them fail under controlled conditions, don't you?

>>>>>But you see, that's a bunch of hooey, because VR6 is nothing more than

>

>Any compression downstream of the VR6 pot would be the result of the
>AMC circuit where D21 and D22 are the variable attenuators (clippers),
>which should have been adjusted for max when setting the 50% point.

I have been letting this slide, but it's time that something should be
cleared up: This radio has no compression per se..... TR18 and TR19
make a -hard limiter-, while the AMC (D21 and D22 driven by the audio
power amp through TR23) is a -soft limiter-.

>>>>>That radio chassis, in its various forms was all over my local area 20
>>>>>years ago. Many people hacked them up (as they did with other radios).

>>>pot.
>>
>>
>>Did you bypass the LP filter in the Cobra as you did in the TRC-449?
>
>No. The Cobra is bone stock. It's a collector's piece for me.

Then I would suspect that as you turned down the mic gain you noticed
your modulation dropping. Try it again, but this time move the mic
closer in order to maintain the same modulation as the mic gain is
turned down. You will notice a significant difference in the quality
of the audio.

The only "building block" I had was the GPS chip. Everything else had
to be designed from the ground up with special attention to weight,
wide temperature variations, power efficiency, and most importantly,
isolation between the radar system, the control systems and the comm
systems. And the latter was a -real- bitch because the system was full
duplex. Playing with building blocks? Not even close, Dave.

>>>circuits, and a 555 timer for button time-out.
>>
>>
>>Which chip are you talking about?
>
>That would be "chips", as there were about 6 or so.

I said "chip", as in one (1). And I asked for only one chip because
you said you used "a" (meaning 'one') "chip" (singular).

> I don't remember
>exactly as I built it in 1988. But I still have it in the bin at home.
>I retired it after splurging on a fancy bells and whistles voice ID
>controller.

Well, there weren't too many DTMF chips in 1988. But even with the
chips that are currently available, all that's needed is a decoder and
some glue logic -- nothing more complicated than a connect-the-dot
puzzle, and not even that hard if the datasheet was like most and
included some basic application schematics. Heck, when I was in high
school I built my first freq counter based on cascaded 7490's (about
30 chips total), but which was just another connect-the-dot project.
The hardest part was putting it together (I'll never do wire-wrap with
that many chips ever again!).

>>>>>I don't do it much now as the demands of family life, and being a good

It seems that elemetary school kids are more up to date than you:

http://mathforum.org/elempow/solutions/solution.ehtml?puzzle=75

You should also check out google to see just how often and widespread
stopwatches are used. I was actually suprised myself.

>But keep digging. It's fun to watch you grasp at straws.

At least I learned something in the process.

Once again you reference nameless sources. Like -that's- supposed to
convince me! Well Dave, I was told by several members of this
newsgroup that you are "George". Does that make it true? Or even
credible? Of course not. If you can't reference your sources then
don't even bother to mention them because facts aren't facts just
because "some guy says so".

>speculate about it

Wrong. You "speculated" that I'm a liberal. By your own standards, that means you must have enough "solid information" about two things; first, you must know enough about liberals to be able to classify them. I find that doubtful since you are a self-proclaimed conservative republican and have repeatedly demonstrated that you have no clue as to the precepts of liberalism. Second, you must have enough "solid information" about me to know my ideologies, which you clearly don't.

You don't even follow your own standards when making SPECULATIONS.

>Not used.

If it's not used then why are there laws that describe it's use and define it's calibration procedures? And why are there so many police departments in other parts of the country that not only use them but use them frequently? More divination from your transparent sphere?

> VASCAR is essentially the same thing only it does the speed=
>distance/time calculation automatically.

Then that would be electronic, wouldn't it?

>>>The law is clear. Experience and common sense covers the rest. What's

>
>I didn't think I needed to. Most people understand that statements are
>not universal, unless expressly noted, and based on the majority of
>cases.

That's the lamest excuse you've provided so far this year.

>Had I said that the police are required to give 5 MPH in ALL cases,
>you would have proven me wrong as it only takes one contrary case to
>prove an absolute statement wrong. That's exactly why I avoid
>absolutes.

You avoid the facts, because the facts get you into trouble every time.

>You seem to feel that I should qualify my statements as not absolute.
>I feel the opposite. It's the "glass is half full versus half empty"
>comparison.

The glass is half full if it's being filled, and half empty if it's being emptied.

Now, back to the topic: If you make a statement but leave out something that's relevant -- possibily even contradictory -- to that statement, you don't think that's being evasive? Kinda like someone

gives you a ride somewhere, and halfway there the cops behind you turn
on their lights and siren, the driver speeds up, then says, "Oh, BTW,
I just stole this car." By your logic, he had a valid reason -not- to
mention that the car was stolen because the vast majority of cars
-aren't- stolen. Right?

>>>It's not an all or nothing world we live in Frank. Stop treating it as
>>>such.
>>
>>
>>You made the claim, Dave, not me.
>
>I made a claim. You misinterpreted it.

I left my crystal ball at work. Sorry, it won't happen again.

Your analogy is bad because the term "biped" can be used both as a
classification and as an individual characteristic, and your 'analogy'
is an equivocation on those two different definitions.

You accused me of ad hominem in response to your eqivocation.... yes,
that -is- especially revealing.

I'll give you that one, and I'll even give up the entire thread just
as long as you can show me that the exceptions are as small as you
claim. Well?

>>or poor qualitative reasoning skills.
>
>Again, that is in comparison to YOUR information, propaganda and
>qualitative skills. And that is what has you steamed. In an arena such
>as politics, there are very few verifiable facts,

There are plenty of verifiable facts -- you just don't even want to
try and verify them because they conflict with your "core beleifs". We
have done this ping-pong game several times before but it seems you
just can't get enough of it. It's obvious that you fear the facts, but
your 'truth-by-repitition' plan just isn't working. Don't you know by
now that I'm just going to come back and set you straight every time
you project your intellectual failures on me? Or is your failure to
realize that fact -another- one of your intellectual failures?

> but a lot of spin
>and propaganda.

All my facts were referenced and can be cross-referenced to a wide
number of unbiased sources. Your 'fact' consisted of a website with a
forged document. That's no spin or propoganda, Dave -- that's the
truth, and it's in the archives if you ever want me to prove -that- to

you as well.

> You tend to believe one side, while I tend to favor
>the other. There is nothing wrong with that. But don't tell me I'm
>wrong because I don't believe the same stuff you do.

I never did. You claimed your beliefs were based on facts. I gave you facts. You discarded them as "biased" without even trying to verify them as facts. You didn't even TRY, Dave. You lied -- your beliefs are NOT based on facts -- on the contrary, your facts are based on your BELIEFS.

>> For an intelligent person like
>>him (or yourself, for that matter) to fall back on "core beliefs" as
>>an excuse to dismiss facts and logic is bogus, and it undermines the
>>credibility of any argument against keyclowns who use the very same
>>tactics.
>
>I can employ logic in the same way that you can. But when the topic
>that yo use your logic on are unverifiable, what good is logic when
>the premise's are faulty?

No good at all, which is what I taught you by using your own arguments as examples. Or is your memory as faulty as your logic?

>>I have adopted -some- tactics used by Twisty, as well as from others
>>in this newsgroup from all three sides of the fence.
>
>At least you can admit that much.

I never denied it.

>>I have also
>>-rejected- some tactics used by Twisty, such as his pop-psychology and
>>his diversionary topics game (the latter, BTW, is being used by Dave
>>quite frequently these days, so if you are going to admonish me for
>>using Twisty's tactics then you should do the same to him).
>
>I enjoy my study of human behavior. It's fun to watch people fit into
>certain categories. Sorry if the truth hurts certain insecure and

That works both ways, Dave. But you would never take this to email
because your ego is at stake -- you could never face the facts in a
private forum without the support of your lap-dog and imaginary
admirers.

Then let me stop you right there. Dave does know his CB radios, and he
knows them a lot better than most people in this group, including (and
especially) myself.

Now I should apologize because it was not my intent to attack you.
Dave was my target. In case you haven't noticed already, a lot of
people in this group are basically full of shit, regardless of how
much they know or don't know about radio. I can see why that happens
because it's easy for geeks, nerds and social misfits to make up
imaginary lives while hiding behind a keyboard. But once in a while a
person like Dave gets to thinking that he is some sort of alpha male,
sometimes manifested as a delusion of intellectual superiority just
like you describe. The response he receives is nothing more than a
normal societal reaction to put him back in his place. Either he gets
the message and starts behaving himself (which rarely happens), bails
from the newsgroup in shame (like so many have done in recent years),
or goes insane and becomes a troll (which is why you will see heavy
trolling here from time to time). My problem with Dave will probably
end soon because a person can only make up so many excuses when the
facts remain the same.

So just be patient. And also be aware that these flame wars occur from
time to time. Just think of them as family squabbles.

By whose standards?
A non-radar state would mean just what the phrase connotates: the state is void of radar.

(Mine and any company who proposes to sell radar to Pennsylvania)

LOL..invoking a marketiing ploy and citing it as a source of reference for the law is entertaining, nothing more.

(Is that what you do for a living, George?)

>Careful Steveo. Twisty thinks he's me......

Yep, right after "Geo" forged you and said you gave him permission to do so in email in order to pollute the group.

>I didn't give him "permission" He told me about

> it after the fact as a courtesy.

You really don't have to explain yourself for my benefit, as it is you who is always struggling to redefine just what you meant to everyone, *after* you post something.

>But I didn't have a problem with it.

And yet another electronic publishing of such a fact.

>Watching you chase your tail trying to figure

>out who is really who is entertaining enough.

I am not the first to note
your behavior outside this group hinges on myself.

>How would you (or anyone else here for that

>matter) know anything about my behavior

>outside this group?

Statistical probability.
Geo just told us about the email. Email is outside this group.

>More self aggrandizing.

You're just mad because without the dx, I am more legal than yourself.
You need a real life, David.

>I have one.

Yet, you somehow feel compelled to tell the world how you consider
peering into the personal lives of select usenet participants and making
such your topic of choice in unrelated groups, a "hobby" of yours. The
all-mesmerizing portion of such a claim, is in reality, you misinterpret
such behavior as having a life.

>who am I today?

The same person who has been shown he was wrong by the entire group, at
one time or another. Most recently by myself, Frank, Bert Craig,
Sideband, Landshark, and probably a few more I missed right off the top
of your pointed little head.

3027. WANTED: CB radios from Raytheon, Apelco, Airline

Newsgroup: rec.radio.cb
Date: 2005-02-19 02:11:31 UTC
From: k5dh@qsl.net
Message-ID: <GZudncXzt8TOPYvfRVn-3A@centurytel.net>
Source record: 196667
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.cb

Greetings from Texas!

I'm looking for the following vintage CB radio
equipment to complete the collection of the
Raytheon/Apelco/Webster CB Radio Museum:

Raytheon:
- RAYCOM III (23 channel solid-state AM mobile)
- RAYCOM IV (23 channel solid-state AM/SSB mobile)
- Ray-Ette (single channel handheld w/regenerative rx)
- Super Ray-ette (single channel handheld w/superhet rx)
- Any Canadian models except the TWR-2C

Apelco:
- 565 (5 channel AM mobile)
- Any Canadian models except the AR-10

Webster:
- Any Canadian models

Airline: (sold by Montgomery Ward)
- GAS587 (tube-type base station)

Also looking for any and all manuals, literature, boxes,
advertising, mobile mounts, hand mics, crystals, power
supplies, accessories, parts kits, et al, for any and
all Raytheon, Apelco, or Webster CB models.

I'm not interested in marine radios except perhaps as a
source of restoration parts (tubes, knobs, meters, mic
cords, power cords, internal components etc). I will
buy marine radios if I think I can use their parts,
but I won't pay much for them (shipping is too high to
pay a lot for parts radios that I might not be able to
actually use).

Raytheon/Apelco/Webster CB Radio Museum web site:
http://www.qsl.net/k5dh/raytheon.html

Thanks and 73,
Dean K5DH

So you not only cite a marketing team as your reference to the law, you insist on it remaining as such.

>I did not reference any marketing team's,

Is your memory that poor? You invoked an un-named company that has a financial interest in marketing their product as an answer to my inquiry as to WHO told you that Pa. was a non-radar state, as you have claimed. If the PR department of that company didn't come up with the term and defninition, just what part of the company would you hazard, did? The janitor?

> nor was my reference regarding any law.

As long as we understand each other that your un-named company applying their own definition to a "non-radar state" to include a state that indeed utilizes radar, is but a single person's opinion.

>It was a general comment and statement that

>is known throught the industry,

I can accept the term is prevalent, but the definition can not encompasses states who do employ radar, no matter who claims it.

>Pa is not really a radar state, now you can sit

>here and try to decipher my meaning.

Ha,,,now, it's not "really" a radar state.
Off you go now, to redefine what you "really' meant when you said "Pa is not a radar state."

>You are a nobody, ur opinion and what you

>say doesn't matter.

Tut-tut,,get over your personal anger that is the cause of so much vile and venom spewing forth from your thrashed psyche and twisted soul.

> I have spoken with more Leo agencies and

>people in the field who know what is what,

Your personal experiences are irrelavant.

>you on the other hand is a usenet blowhard

>who's only goal is to get under peoples skin

>with your assinine replies.

My goodness, coming from one who has called each and every participant in this group (except, for David T. Hall, Jr, of course) a homosexual at one time or another, your thoughts and warm wishes will certainly be filed appropriately.

>So how many more times will you call me

>dave Hall?

How many more times will you forge him?

> you dumb jackass.

The mother issue has you beside yourself.

Well, it's called picking the right spot & time ;)
Nope didn't even see the replays, but sounds nasty.
Hey, I remember when, I think it was Ernhardt Sr
that purposely ran into some dude that just won the
race, now that's racing :))

Gee,,,that's because only State Cops are permitted to have them in Pa.

>Gee, then that makes pennsy not really a

>radar state

Here you are redefining what you "really" meant. Now you are back-pedaling with "Pa is not REALLY a radar state". LMAO, Again,,if it was a non-radar state, radar would not be implemented by the authorities. In fact, you are the only one I have ever heard ue the term "non-radar" state when the state does in fact, use radar. Can you cite a single source where you took this phrase from? Perhaps a link or provide for it?

>Any idea how many tropers and police officers
>are in Pa, Ill bet one county in Florida alone

>has more radar than the whole state of PA.

>The Department has about 540 Decatur

>Genesis Handheld radar units. The

>Department also has about 250 other radar

>units made by a different manufacturer.

>http://www.psp.state.pa.us/psp/cwp/view.asp?

>A=3&Q=172084&tx=1

Absent is a date, or a reference to what department...it could be a single state polic department in any number of counties in Pa..but as an always trusting type guy, I'll go ahead and give you the benefit of the doubt and assume (against my better judgement) that the entire state police department of Pa has only the amount of radar detectors you claim. One would also assume, the department feels it adequate for the amount of roads they must cover, or they would have more, with all the money being poured into the coffers of domestic agencies, post-911. It all boils down to the state police department being equipped with radar, which results in claiming "Pa is a non-radar state", being incorrect. Now, surely you aren't going to invoke the (limited?) number of radar units in the state, as the criteria for determining your definition of a non-radar state,this late in the thread, are you? David T. Hall Jr. did the same exact thing when it was demonstrated he fails to abide by his own invoked criteria for determining what he holds as a federal criminal. Then again, several people have illustrated his failure to hold himself to his own standards.

I'll be damned. Rogerbird was right. I added a mica insulator between the final
and heatsink, with the heatsink compound. It worked. At first, I thought Jim was
right. But the problem reoccured. I am still going to bias it.

But the fix was $1.69

>important that everyone here knows?

>Vinnie S.

Frankly, Vinnie, Frank isn't the only one that noticed a pattern. Dave gets shown he is incorrect, in any manner, and the pattern is the same. The person that showed Dave he was wrong gets attacked, and a host of coincidentally-timed tech questions manage to appear, then Dave is always thanked, vehemently, on multiple occasion, such as you just did. Happens on cue. Please do not take offense at what I am about to mention, or you might as well begin killfiling all those who disagree with Dave. You were quick to comment on FRANK taking a "swipe" at Dave, but curious, is why you never, not once, commented to Dave for swiping at the many folks he has, from which you have beared witness, most recently,..Frank,. which is sort of how all this stuff got started. You are curiously silent when Dave "swipes" or gets personal.
In fact, one you leave the area of the keyboard,,,who the hell really cares?
Just pointing these things out, Vinny.

Good point, but I'm getting tired of my old lady using that excuse
after 18 years. I can't get my hair to spike like Jamie Mac.

PC-122 is nice. The reason I prefer the Grant is that there were so many, I can
get any problems solved easily, or modded easily.

Likewise..... I was hoping to get an early ride in,
but we are expecting rain most of the weekend. Oh well,
new keg, nice roaring fire, not more you can ask for :)

Landshark

Im tellin yah it workx and its so worth it

Turn $5.00 into $50,000...read this to find out how!!!
READING THIS COULD CHANGE YOUR LIFE!!!
I found this on a bulletin board like this one and decided to try it.
A little while back, I was browsing through a newsgroup, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $5.00! So I thought, "Yeah right, this must be a scam", but like most of us, I was curious, so I kept reading... I also did an internet search and found nothing but success stories.

Anyway, it said that you need to send $1.00 to each of the 5 names and address stated in the article. You then place your own name and address in the bottom of the list at ..5, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured "what have I got to lose except 5 stamps and $5.00, right?"

Then I invested the measly $5.00 (I use the word "measly" because $5 really is measly compared to the money I have made through the initial investment). Well GUESS WHAT!!... within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in.
In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over $10,000.00 and it's still growing.

This is now my fourth week and I have made just over $42,000.00 and it's still coming in rapidly. It's certainly worth $5.00, and 5 stamps, I have spent more than that on the lottery!!
Let me tell you how this works and most importantly, why it works....
Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it.
I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy!

Suggestion:
Read this entire message carefully! (print it out or download it.)
Follow the simple directions and watch the money come in! It's easy.
It's legal. And, your investment is only $5.00 (Plus postage)

IMPORTANT:
This is not a rip-off; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are adhered to, you will receive extraordinary dividends.
PLEASE NOTE:
Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days.
This program remains successful because of the honesty and integrity of the participants. Please continue it's success by carefully adhering to the instructions.
You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists.
Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list.
Here are the 4 easy steps to success:

STEP 1:
Get 5 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST."
Now get 5 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery).
Next, place one paper in each of the 5 envelopes and seal them. You should now have 5 sealed envelopes, each with a piece of paper stating the phrase "PLEASE
PUT ME ON YOUR MAILING LIST.", your name and address, and a $1.00 bill.
What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL!
You are requesting a legitimate service and you are paying for it!
Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal!
Mail the 5 envelopes to the following addresses:

..1) Jason R
3702 Werner Ave.
Austin, TX 78722

..2) J Arenas
1600 Malibu
Carrollton, TX 75006

..3) Richonda S
CMR 402 BOX 274
APO, AE 09180

..4) J Roth
2901 Barton Skyway ..3406
Austin, TX 78746

..5)Jesse James
1778 Swift Ave.
Ventura, Ca 93003

STEP 2: Now take the ..1 name off the list that you see above, move the other names up (5 becomes 4, 4 becomes 3, etc...) and add YOUR Name as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 32,000+) All you need is 200, but remember, the more you post, the more money you make!

This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again.

PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions.
Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way.

NOTE:
You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.)
So, as each post is downloaded and the directions carefully followed, five members will be reimbursed for their participation as a List Developer with one dollar each.
Your name will move up the list geometrically so that when your name reaches the ..1 position you will be receiving thousands of dollars in CASH!!!
What an opportunity for only $5.00 ($1.00 for each of the first five people listed above)
Send it now, add your own name to the list and you're in business!

---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS----------
Step 1)
You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the
entire letter into the computer's memory.
Step 2)
Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list.
Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to.
Step 4)

Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions, etc.)
Step 5)
Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this
will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button.
You're done with your first one!
Congratulations...THAT'S IT!
All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!
REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200
That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it.
JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.
Now the WHY part:
Out of 200 postings, say I receive only 5 replies (a very low example).
So then I made $5.00 with my name at ..5 on the letter.
Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at ..5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at ..4 and only 5 replies each, I will bring in an additional $125.00!
Now, those 125 persons turn around and post the MINIMUM 200 with my name at ..3 and only receive 5 replies each, I will make an additional $626.00!
OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at ..2 and they each only receive 5 replies, that just made me $3,125.00!!!
Those 3,125 persons will all deliver this message to 200 newsgroups with my name at ..1 and if still ONLY 5 persons per 200 newsgroups react I will receive $15,625,00!
With an original investment of only $5.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to names on the list, putting your name at number 5 again. And start posting again.
The thing to remember is do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!!
So, can you afford $5.00 and see if it really works?? I think so...
People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try?

Estimates are at 20,000 to 50,000 new users, every day, with thousands
of those joining the actual internet.
Remember, play FAIRLY and HONESTLY and this will really work!!!

Nah, he was just a small piece of the puzzle. The Mets paid too much for
something unproven.

Yes, several kids, and that one little deformed one that the rest of us
couldn't stand. I think it's name was "George". At any rate, we took it out
back and threw it in the river. Dunno what came of it after that for sure.
I've heard it grew up to be a sad little usenet troll and moved up northeast

somewhere.

Twisty has his own dialog with Dave. As for the argument between Dave
and myself, the only person jumping in is you.

Source record: 196706

So you are an xtra-class ham and claim to be an "engineer" with 35
years experience in electronics, right? Well, let's review what I have
taught you so far in our recent discussions. These are subjects where
you showed either a dysfunctional understanding or complete ignorance:

The relationship between current and voltage:
The definition of 'Alternating Current';
The difference between a fundamental and a harmonic;
The definition of 'pard';
The difference between a battery and a capacitor;
The AC resistance of a capacitor;
The non-linear characteristics of a capacitor;
The regulating characteristics of non-linear components;
The ability to amplify the non-linear characteristics of components;
The linearity of a capacitor charging under constant current;
The definition of a 'curve';
The function of a swinging choke;
The function of a constant-voltage transformer;
The thermal characteristics of a resistor;
The operation of a thermistor;
The reason a fuse is called a fuse;
The permeability differences of various ferrite materials;
The proximity effect of a directional microphone;
The definition of 'compression';
The difference between limiting and compression;
The difference between hard limiting and soft limiting;
The definition of 'downward expansion'.

Notice that I -didn't- include any topics in politics, theology,
philosophy, logic or literary fiction, although your education is
improving in those areas, too. So what's your next lesson going to
cover, Dave?

It's kind of brings back some sad memories, when you bring this stuff up. I went
toe DeVry in the mid 1980's. For our communications class, the proffessor was
probably the worst teacher I have ever had, although a very nice guy. ANyway,
the trimester was about 15 weeks long, after about 11-12 weeks, he was so bad.
we were stuck on chapter 1. The students were in a revolt, calling for the
teacher to be transferred. Most of them complaining daily to the dean. The big
kicker was he was costing them the high GPA, as well as the cost of tuition.
with people scoring low on exams. I didn't say anything. At least to the dean. I
did complain to other students, but was not a rabble rouser. Never went to
authority.

Anyway, sometime near week 11 or 12, me and this other gentleman were called to
the dean's office, to speak on the matter. My first question was, why did you
select us? He answer that with so many people complaining to him, he want 2
students with good grades, that he hadn't spoke too, or heard from. He wanted a
independent opinion. He wanted an opinion not based on rage. So I gave it, and
so did the other guy. I basically said what kind of teacher he was. I said that
the book has saved me. If it weren't for the book, I would be lost. I also told
him that I was think about taking a extra communications class, to make up for
what I didn't learn yet. The discussion was very low key, and civilized. The
dean seemed to appeciate that. I don't think it was ever mentioned to fire or
transfer him. But hthe teacher was gone the next day. I always felt bad about
that. Still do. The remain 3 weeks was taught by one of the best teachers there.
We zipped to more in the 3 weeks, then in the previous 12.

Ok, it's not a society, it's just me.

Anyway, I'd like to get a collection of stock SSB radios before the golden screwdriver techs destroy the few that remain intact. So I'm going to start a search for any out-of-production SSB CB that has never been peaked, tweaked or modified. And I've noticed that it's almost impossible to find an unmodified radio on ebay. So if you have one that meets the criteria, send me an email with the price and condition of the radio, and if I don't have the model already I'll consider the offer. I might even make an internet museum if there are enough stock radios still in existence!

BTW, this offer will stand until I run out of money or storage space, which ever comes first.

That's a drag. At least you had the ambition and interest to stay with
the program even when the instructor couldn't.

BTW, a couple years ago I inherited an old DeVry multimeter that was
built by my step-dad. Did you make one of those in the course or were
they optional projects?

We built a power supply with function generator. It's funny you say that, sine I
just picked it up from my parents' house 2 days ago. It was in the attic more
than 20 years.

3081. *post 100* >> GOOD NEWS! - Over 2000 years ago Jesus Christ suffered and died on a cross and rose from the dead so that we can be forgiven of our sins(misdeeds) and have a home in Heaven when this life has ended. Most people just don't know how to ask Jesus Christ into their hearts. Heres how...

Newsgroup: rec.radio.cb
Date: 2005-02-19 20:32:05 UTC
From: RL_Grossi_2005@sbcglobal.net
Message-ID: <1108845125.365642.280110@c13g2000cwb.googlegroups.com>
Source record: 196721

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our past, present and future sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins.

After Jesus died He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Holy Bible very clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

If you decide to wait till later you may die before you get another chance to be saved because none of us knows exactly when we will die.

This means that if we die without trusting in Jesus Christ as our Lord and Saviour we will be forever separated from the love of God in a place called Hell. This place called Hell is a place of eternal torment, suffering, pain and agony for all those who reject Jesus Christ.

Choose Jesus Christ today and you will have peace in your life now and forever.

Have a great day!

3084. LETS HELP EACH OTHER GET RICH QUICK!!!!PLEASE READ!!!!

Newsgroup: rec.radio.cb
Date: 2005-02-19 21:03:16 UTC
From: dhargan@santel.net
Message-ID: <1108846996.673901.129750@g14g2000cwa.googlegroups.com>
Source record: 196724

I found this in a news group and decided to try it. A little while back, I was browsing through

news groups, just like you are now and came across a message just like this, that said you

could make thousands of dollars within weeks with only an initial investment of $6.00!!!

So I thought yeah right, this must be a scam!!! But like most of us, I was curious, so I kept

reading. Anyway, it said that you send $1.00 to each of the 6 names and addresses stated in the

message. You then place your own name and address at the bottom of the list at #6 and post the

message in at least 200 news groups. (There are thousands). No catch, that was it.

So after thinking it over, and talking to a few people first, I thought about trying it. I

figured, what have I got to lose except 6 stamps and $6.00, right? So I invested the measly

$6.00!!! Guess what? Within 7
days I started getting money in the mail!!! I was shocked!!! I figured it would end soon, but

the money just kept coming in!!! In my first week, I had made about $25.00. By the end of the

second week, I had made a total of over $1,000.00!!! In the third week, I had over $10,000.00

and it is still growing!!! This is now my fourth week and I have made a total of just over

$42,000.00 and it is still coming in rapidly!!! It's certainly worth $6.00 and 6 stamps!!! I

have spent more than that on the Lottery!!!

Let me tell you how this works and most importantly, why it works!!! Also, make sure you print

a copy of this message now. So you can get the information off of of it as you need it. I

promise you that if you follow the directions exactly, that you will start making more money

than you thought possible by doing something so easy!!!

Suggestion: Read this entire message carefully!!! (Print it out or download it.) Follow the

simple directions and watch the money come in!!! It's easy!!! It's legal!!! Your investment is

only $6.00 (plus
postage).

IMPORTANT: This is not a rip-off!!! It is not illegal!!! ? It is almost entirely risk free and

it really works!!! If all of the following instructions are adhered to, you will receive

extraordinary dividends!!!

Please note: Follow these directions EXACTLY, and $60,000.00 or more can be yours in 20 to 90

days!!! This program remains successful because of the honesty and the integrity of the

participants!!! Please continue its success by carefully adhering to the instructions.

You will now become part of the mail order business. In this business your product is not solid

or tangible, it is a service. You are in the business of developing mailing lists. Many large

corporations are happy to pay big bucks for quality lists. However, the money made from a

mailing list is secondary to the income which is made from people like you and me asking to be

included on your mailing list!!!

Here are the 4 easy steps to success:

Step 1: Get 6 separate pieces of paper and write the following on each piece of paper.

PLEASE PUT ME ON YOUR MAILING LIST

Now get 6 U.S. dollar bills and place ONE inside each of the 6 pieces of paper so the bills

will not be seen through the envelopes (to prevent mail theft). Next, place one paper in each

of the 6 envelopes and seal them, you should now have 6 sealed envelopes. Each with a piece of

paper stating the above phrase, your name and address, and a $1.00 bill.

THIS IS ABSOLUTELY LEGAL!!! YOU ARE REQUESTING A LEGITIMATE SERVICE AND YOU ARE PAYING FOR

IT!!!

Like most of us, I was a little skeptical and a little worried about the legal aspect of it

all. So I checked it out with the U.S. Postal Service and they confirmed that it is indeed

legal!!!

Mail the 6 envelopes to the following addresses:

J.J. Maxey
355 N. Manila Ave.
Fresno, CA 93727
USA

Kyle Pate
P.o. Box 2046
Great Falls, MT 59403-2046
USA

G.H.L.
1600 N Thorntree Rd
Muncie, IN 47304-9710
USA

G. Skillen
32 Ebor Drive
Tates Avenue
Belfast, BT12 6NR
Northern Ireland

M. Motut
2377 Anora Dr.
Abbotsford, BC v2s 5p3
Canada

Deana Hargan
P.O. Box 22
Ethan, SD 57334

Step 2: Now take the #1 name off the list that you see above, move the other names up (6

becomes 5, 5 becomes 4, etc.) and add your name as number 6 on the list.

Step 3: Change anything you need to, but try to keep this message as close to what you see as

possible. Now, post your amended message to at least 200 news groups. I think there are close

to 24,000 groups!!! All you need is 200, but remember, the more you post, the more money you
make!!! This is perfectly legal!! If you have any doubts, refer to Title18 sec. 1302 & 1341 of

the postal lottery laws. Keep a copy of these steps for yourself and whenever you need money,

you can use it
again. Please remember that this program remains successful because of the honesty and the

integrity of the participants and by their carefully adhering to the directions!!!

Look at it this way. If you are of integrity, the program will continue and the money that so

many others have received will come your way!!!

Note: You may want to retain every name and address sent to you, either on your computer or

hard copy and keep the notes people send you. This verifies that you are truly providing a

service. Also, it might be a good Idea to wrap the $1 bills in dark paper to reduce the risk of

mail theft.

So, as each post is downloaded and the directions carefully followed, six members will be

reimbursed for their participation as a list developer with one dollar each. Your name will

move up the list geometrically so that when your name reaches the #1 position, you will be

receiving thousands of dollars in cash!!! What an opportunity for only $6.00!!! ($1.00 for each

of the first six people listed above).

Send it now, add your own name to the list and your in business!!!

DIRECTIONS FOR HOW TO POST TO A NEWS GROUP!!!

Step 1: You do not need to re-type this entire message to do your own posting. Simply put your

cursor at the beginning of this message and drag your cursor to the bottom of this message and

select copy from the edit menu. This will copy the entire message into the computer memory.

Step 2: Open a blank note pad file and place your cursor at the top of the blank page. From the

edit menu select paste. This will paste a copy of the message into notepad so that you can add

your name to the list.

Step 3: Save your new notepad file as a txt file. If you want to do your posting in a different

setting, you'll always have this file to go back to.

Step 4: Use Netscape or Internet Explorer and try searching for various news groups (on-line

forums, message boards, chat sites, discussions, etc.)

Step 5: Visit these message boards and post this message as a new message by highlighting the

text of this message from your notepad and selecting paste from the edit menu. Fill in the

subject, this will be
the header that everybody sees as they scroll through the list of postings in a particular

group. Click the post message button. You've done your first one! Congratulations!!! All You

have to do is jump to
different news groups and post away, after you get the hang of it, it will take about 30

seconds for each news group!

REMEMBER, THE MORE NEWS GROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!!!! (But you have to post a minimum of 200).

That's it!!! You will begin receiving money from around the world within days!!! You may

eventually want to rent a P.O. Box due to the large amount of mail you will receive. If you

wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it.

JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT!!!

Now the why part. Out of 200 postings, say you receive only 5 replies (a very low example). So

then you made $5.00 with your name at #6 on the letter. Now, each of the 5 persons who sent you

$1.00 make the minimum 200 postings, each with your name at #5 and only 5 persons respond to

each of the original 5, that is another $25.00 for you. Now those 25 each make 200 MINIMUM

posts with your name at #4 and only 5 replies each, you will bring in an additional $125.00!!!!

Now, those 125 persons
turn around and post the minimum 200 with your name at #3 and only receive 5 replies each, you

will make an additional $625.00!!! OK, now here is the fun part, each of those 625 persons post

a minimum 200 messages with your name at #2 and they each only receive 5 replies, that just

made you $3,125.00!!! Those 3,125 persons will all deliver this message to 200 news groups, If

just 5 more reply you will receive $15,625.00!!! All with an original investment of only

$6.00!!! Amazing isn't it!!!! When your name is no longer on the list, you just take the latest

posting in the news groups and send out another $6.00 to the names on the list, putting your

name at number 6 again.

You must realize that thousands of people all over the world are joining the internet and

reading these messages every day!!! Just like you are now!!! So, can you afford $6.00 and see

if it really works? I'm glad I did!!! People have said, "what if the plan is played out and no

one sends you the money?" So what!!! What are the chances of that happening, when there are

tons of new honest users and new honest people who are joining the internet and news groups

everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every

day!!!

REMEMBER PLAY HONESTLY AND FAIRLY AND THIS WILL REALLY WORK!!!

--comments/feedback(please post your feedback/experiences here)---

Not bad for 1 hr's work....made me around $5320 in roughly 35 days - Anthony M Texas

Hello, I rcvd 269 bucks in the post in 2 weeks. Dan Miami, FL

I had to wait around 10 days before I had any results - $13,450 as of 3rd Jan 2003 to date(14th

Feb 2003).Am going to re-post it again for more money!! - Del from Alberta - Canada

Only received around $588 in the post the last 2 months since I started the program but I'd

posted to approx. 100 newsgroups - James P Manchester UK

cool....didn't expect much out of this "scam" initially but I have pay my credit card bill -

Mustafa , Jordan

I have received money from people all over the world...here in China it is very good money and

I buy new computer last month - Zhong Wen ...Guangxi CHina

For $6,I made $246 in 2 weeks --ROMEO2326 little rock,AR US of A

Hey, just dropping a line to say that after posting to well over 820 newsgroups on google and

my ISP newsgroup server over a period of 4 ½ months ,I've raked in $54280 . Mucho dinero

baby!!!! Peace, Drew Dallas TX

I hope whom ever receives my envelopes enjoys the crispy new dollar bills. Great program, I

just started receiving cash. S.C.B.

> you showed either a dysfunctional understanding or complete ignorance:

I took a computer programming course once.
The instructor barely knew enough about BASIC to get by.
She had no idea what the period was used for in a print statement.
One time the guy sitting beside me at the machines was asking how come his
statement wasn't working.
She couldn't figure it out.
I took a quick look and knew why instantly.
He was trying to use two <> conditions between if and then.
That's a big no no in BASIC.

I held a 2nd class FCC license for five years.
But I didn't know all that much about electronics since I was using the
license to get a better paying job, which never occurred.
And since it was easy to get, I took the test and passed with a 95% score.

If someone wants a job as an "engineer" bad enough, they'll get one.
The problem is, they'll have to prove their skills on the job.
If they can't muster it, they'll be looking for a new career.

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our past, present and future sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins.

After Jesus died He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Holy Bible very clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

If you decide to wait till later you may die before you get another chance to be saved because none of us knows exactly when we will die.

This means that if we die without trusting in Jesus Christ as our Lord and Saviour we will be forever separated from the love of God in a place called Hell. This place called Hell is a place of eternal torment, suffering, pain and agony for all those who reject Jesus Christ.

Choose Jesus Christ today and you will have peace in your life now and forever.

Have a great day!

He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins.

After Jesus died He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Holy Bible very clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

If you decide to wait till later you may die before you get another chance to be saved because none of us knows exactly when we will die.

This means that if we die without trusting in Jesus Christ as our Lord and Saviour we will be forever separated from the love of God in a place called Hell. This place called Hell is a place of eternal torment, suffering, pain and agony for all those who reject Jesus Christ.

Choose Jesus Christ today and you will have peace in your life now and forever.

Have a great day!

Something of a question? which DeVry was that. I attended here in Phoenix
between 84 and 87 (part time). Unfortunately, due to a bad set of
circumstances <of which I will not go into here>, I was unable to complete
my education in the Engineering field.

Still, there were a few good instructors at the facility here in Phoenix
(even managed to surprise 1 or 2 of them with some intuitive insights into
the math/calculus behind some of the Engineering Theory).

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our past, present and future sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins.

After Jesus died He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Holy Bible very clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

If you decide to wait till later you may die before you get another chance to be saved because none of us knows exactly when we will die.

This means that if we die without trusting in Jesus Christ as our Lord and Saviour we will be forever separated from the love of God in a place called Hell. This place called Hell is a place of eternal torment, suffering, pain and agony for all those who reject Jesus Christ.

Choose Jesus Christ today and you will have peace in your life now and forever.

Hello All:

Still looking for a Manual for a General Radiotelephone MC12 Tube Radio.

This was Generals last up dated radio that they removed the 3 function tube and installed a much larger tube for the Modulator, and this thing literally shook with audio.

It had a problem with the new tube being physically too close to the finial Tube that in some chassies made the Larger Modulator Tube have to be installed at a angle that caused a intermittent audio.

The fix for this was to pain stakinly move the modulator tube socket over about 3/8 of an inch.

Will be happy to pay for copying and mailing costs.

Jay in the Mojave

Kreedentials:
Rock n Roll and C&W, (have a radio that plays both kinds) Fan

Owner 1964 Bucik, 300 CI V8, has large off road tires and 96 inch whip antenna in the middle of the car

A little while back, I was browsing some newsgroups and came across an article
similar to
this that said you could make thousands of dollars within weeks with only an
initial
investment of $6.00! So I thought, "OK, why not try this if it is a scam I
will only lose
$6.00.". Anyway, it said that you send $1.00 to each of the 6 names and address
stated in
the article. You then place your own name and
address at the bottom of the list at #6, and post
the article in some newsgroups(There are thousands) or e-mail it to some
people. No catch,
that was it. The main difference between this system and others is that you
have a mailing
list of 6 instead of 5. This means that you average gain will be approximately
15 times
higher!!!

So after talking to a few people, I thought, what have I got to lose except 6
stamps and
$6.00 dollars, right?

But like most of us I was a little skeptical and a little worried about the
legal aspects of it
all. So I checked it out with the U.S. Post Office(1-800-725-2161) and they
confirmed
that it is indeed legal!

I then invested the measly $6.00, and stamps.

Well, GUESS WHAT..... within 7 days, I started getting money in the mail!

I was shocked! I still figured it would end soon, and didn't give it another
thought. But the

money coming in. In my first week, I made about $36.00 dollars. By the end of
the second
week I had made a total of over $1,000.00 dollars!!!!!! In the third week I had
over
$10,000.00 and its still growing. This is now my fourth week and I have made a
total of
just over $42,000.00 and it's still coming in VERY rapidly!

It's certainly worth $6.00 and 6 stamps, I spent more than that on the lottery!!

Let me tell you how this works and most importantly why it works....also make
sure you
print a copy of this article NOW. So you can get the information off it as you
need it. The
process is very simple and consists of 3 easy steps:

STEP 1:Get 6 separate pieces of paper and write the following on each piece of
paper
"PLEASE PUT ME ON YOUR MAILING LIST. + your name and address." Now get 6
U.S. $1.00 bills (or equivalent in your local currency) and place ONE inside
EACH of the
6 pieces of paper so the bill will not be seen through the envelope to prevent
thievery.
Next, place one paper in each of the envelopes and seal them. You should now
have 6
sealed envelopes, each with a piece of paper stating the above phrase, your
name, and a
$1.00 dollar bill. What you are doing is creating a service by this. THIS IS
ABSOLUTELY LEGAL!

STEP 2: Mail the 6 envelopes to the following addresses:

#1 Brent Kamprud
657 W. 1st Pl.
Mesa, AZ 85201

#2 Geno Barretto
819 Cedar Ridge
Harker Heights, TX 76548

#3 Michael Williams
977 Ribbontail St.
Corpus Christi, TX 78418

#4 Nick Kuzmick
4601 76th Ave Ct NW
Gig Harbor, WA 98335

#5 Mitchel Kwiatkoski
18523 61st PL W
Lynwood,WA 98037

#6 Edna and Jonathan Jonas
2001 Ward street
Saint Laurent, Qc, CANADA H4M1T3

STEP 3: Now take the number one name off the list that you see above, move the
other
names up (#6 becomes #5, #5 becomes #4, etc...) and add YOUR name as #6 on the
list.

STEP 4: Change anything you need to, but try to keep this article as close to
original as
possible. Now, post your amended article to some newsgroups (I think there are
close to
24,000 newsgroups) and/or e-mail it to some people. Remember, the more you
post, the
more money you will make!

Don't know HOW to post in the newsgroups? Well do exactly the following:

DIRECTIONS-HOW TO POST TO NEWSGROUPS

STEP 1: You do not need to re-type this entire letter to do your own posting.
Simply put
your cursor at the beginning of this letter, click and hold down the mouse
button. While
continuing to hold down the mouse button, drag your cursor to the bottom of
this
document and over to just after the last character, and release the mouse
button. At this
point the entire letter should be highlighted. Then, from the 'edit' pull down

menu at the
top of your screen select 'copy'. This will copy the entire letter into
the
computers memory.

STEP 2: Open a blank 'notepad' file and place your cursor at the top of
the
blank page.
>From the 'edit' pull down menu select 'paste'. This will paste a copy
of the
letter into
notepad so that you can add your name to the list. Remember to
eliminate the #1
position,
move everyone up a spot(re-number everyone else's positions), and add
yourself
in as #6.

Step 3: Save your new notepad file as a .txt file. If you want to do
your
postings in
different sitting, you'll always have this file to go back to.

Step 4: Keyword Newsgroups and post away!

>as long as you can show me that the exceptions are as small as you
>claim. Well?

How am I supposed to do that? You won't take my "word of mouth"
testimony from the cops I know, and, as far as I know, there isn't any
database accessible on the net which keeps records of such things.

I can't prove that a man walked on the moon, but I accept that it did
happen.

I don't see how that is relevant.

There is a chance that, on any given day, your car could become
involved in an accident or the airplane you fly on could crash. Do
they tell you this when you board the plane, or when you sign on the
dotted line when buying a car?

Then you have no facts to back up your claim, Dave.

>I can't prove that a man walked on the moon, but I accept that it did
>happen.

Wrong. There are -facts- to back up that statement, therefore you
-can- prove that a man walked on the moon.

Then all humans are bipeds regardless of how many legs they have. But
that's not an analogy to the laws of PA since electronic devices are
classified -differently- than mechanical devices. So your analogy is
like saying that an apple is a banana because they are both fruits.

I'm not picking nits, Dave -- I'm pointing out the logical fallacies
you are using to rationalize your errors.

All that stated was that school kids could calculate the speed given
the data. They did not address the reaction time element, and how
errors could be introduced as a result.

iamnotgeorge posted an excerpt which outlines these errors and how
they could affect the accuracy of the recorded speed. Perhaps you
should review it.

The main reason that 3368(c)(4) gives a 10 MPH grace for devices like
VASCAR is for precisely this reason. A stopwatch is no less prone to
reaction time error than VASCAR is.

Oh, it's back to that "if the source is not a recognized authority in
some field, then I can't accept it as fact" argument again?

Then you'd better apply the same standards to your political
arguments, as there is very little verifiable facts there.

So basically you are telling me that what I've heard is meaningless
because you don't know the cops who told me?

Well, maybe you can't except it, but I can, since I know the sources
and trust their judgement. They have no reason to lie to me.

Contrary to your erroneous statement, I know a lot about liberals. I know how they think, I know what they consider "ideal" and I know why they think that way. If you are going to fight something, you are best served knowing the enemy.

I called you a liberal, because you voted for one, and vigorously defended another.

Your definition of what you claim to be politically, is a classic case of denial. It's funny how some liberals are ashamed to admit what they really are.

You don't know why? Gee, Dave, you seem to know everything else about
methods of speed enforcement in PA, why not that?

>> And why are there so many police
>>departments in other parts of the country that not only use them but
>>use them frequently?
>
>Where is your evidence to support that statement?

Google. Just plug in "speed limit", "enforcement" and "stopwatch",
then check out some of the 1500+ hits. Stopwatches are used by many
law enforcement agencies all around the country because they are
simple and reliable. If are too lazy to look them up yourself and want
more specific references, I can make a list of those, too.

<snip for brevity -- although not one of my "core beliefs">

The fact is that 3368(c) is the law in PA, it includes both paragraph
1 -and- paragraph 4 which invalidates your statement for all cases,
and your statement didn't include the clause, "in most cases".

>>>You seem to feel that I should qualify my statements as not absolute.

>involved in an accident or the airplane you fly on could crash. Do
>they tell you this when you board the plane, or when you sign on the
>dotted line when buying a car?

There is a term called "assumed risk", which is a legal term used to
define a situation where a person knows that some risk is unavoidable;
i.e, that exceptional circumstances -can- occur. This is contrary to
your statement in which you -defined- the circumstances: that they may
-not- ticket you for doing 56 in a 55 because they are "required" by
law to provide some leeway. Do you not know the meaning of the word
"require"? Here, I'll do you the favor of quoting Webster:

require -- 1. to insist upon, as by right; demand; order. 2. to demand
as necessary; need; as, man -requires- food.

Now is there anything in that definition which implies, generally or
explicitly, any exceptions? Does it say, "almost always", or "most of
the time", or "in a vast majority of cases"? No.

Your statement was wrong, Dave. That much is clear to "the vast
majority" of people. The only question that remains is how many more
excuses you are going to try.

>you project your intellectual failures on me?

Interesting choice of words. It is you who keep relying on the "truth
by repetition" fallacy. No matter how many times you claim to have the
facts, the true fact is that all you have are the opinions and
conclusions of OTHER people. You can list a dozen web sites and
articles that "verify" the same "fact", but they are no more credible
than the National Enquirer. And to think you cast off my sources as
"propaganda", yet stick so emphatically to your sources as "absolute
fact". That's a laugh Frank.

Unless you have connections inside the government, you have to base
what you believe as "fact" on the accuracy of reporters and other
"mouthpieces". If you can't see how this invites a great deal of spin
and manipulation, you are more hopeless than I thought.

So tell me one more time about your "facts".

>
>
>All my facts were referenced and can be cross-referenced to a wide

Ego? Please (again). This showcases your emotional attachment to this
whole situation.

First off Frank, I have no need or desire to take this to E-mail. I'm
not the one who desires enlightenment. You have been chasing me since
the election, and have grown bitter, crass, and highly emotional. Very
atypical from how you used to behave. I seriously stung you (And it
was not intentional. I had more respect for you at the time), and
you've been chasing me like a rabid dog ever since. From
troubleshooting radios, to speed traps, to who know what else, If I
say "zig", you say "zag", and make every effort to try (however
poorly) to prove me wrong. You've even aligned yourself with one of
your worst former adversaries in the pursuit of this goal.

Right now I am enjoying your attention. Eventually, I'll tire of it,
and I will just stop responding, in the same vein that I treat Twisty.

It's a simple matter of priorities. Opposing illegal radio operation
is not as important as opposing George W. Bush and the war on terror.

In this vein, former adversaries are now aligned and in sync, even if
out of phase.

But like in world politics, beware of who you go to bed with....

Maybe you missed the comments from Chief Craig:

"I am quite happy to see one of my articles put to such good use.
In regard to your bonus question - any discrepancy in timing is an
issue people commonly ask about. The stopwatch method is very accurate
because it relies upon anticipation rather than reaction....."

>iamnotgeorge posted an excerpt which outlines these errors and how

Perhaps you should quote it.

>The main reason that 3368(c)(4) gives a 10 MPH grace for devices like
>VASCAR is for precisely this reason. A stopwatch is no less prone to
>reaction time error than VASCAR is.

Reaction time error is not addressed in PA law. The accuracy of
electronic devices -is- addressed, hence its differentiation between
electronic and mechanical devices.

>served knowing the enemy.

Then you don't know squat because you took up a fight with someone
that wasn't your enemy, Dave.

>I called you a liberal, because you voted for one, and vigorously
>defended another.

Liberals are also known to sleep when they are tired, eat when they
are hungry, and shit when their bowels move. I guess that makes -you-
a liberal, too, Dave.

>Your definition of what you claim to be politically, is a classic case
>of denial. It's funny how some liberals are ashamed to admit what they
>really are.

You must have missed my postings over the past several years -- I have
never been ashamed to admit anything. In fact, I've probably admitted
more than most people really wanted to know. And after arguing with
Twisty for much of that time, I even admitted that he was right on the
Bush topics. Yet you can't even admit when you make one single little
mistake. It is -you- that is in denial, Dave, not me.

What, you believe you are entitled to a response to every post you
make? What was that you were saying before about an ego?

No, the rules are that *I* decide which posts I want to respond to and
which parts. By engaging in "conversation" you agree to abide by
those rules. If you don't want to abide by the rules, you are free to
not respond.

I just write down things in a notebook and file it away. Like I said,
30 years of bad parts would be quite a pile. Not something I (or my
wife) would appreciate.

>You are so hell-bent on your 'experience' excuse that you'll push it
>regardless of the context, won't you?

Because it applies, no matter how much you try to downplay it. No
troubleshooter starts with a blank slate every time he sets out to fix
something. Experience will modify his analytical "flowchart", when
working on devices with similar problems.

500-600 ohms is common for most CB dynamic mikes. Besides, the signal
generator impedance is the same either way.

>>I do not have the factory specs for this radio as it was made in 1971.
>>The SAMS is as good as it gets, and consistent with other radios.
>
>
>Yet radios have their differences.

Subtle differences, dependant on how much microphone preamp stages are
included in the audio chain. Very few radios have the sophisticated
gain and audio leveling in the early stages like the 449's chassis.
But I have never seen an audio spec which called for .5 mV. The
smallest that I've seen was 2 mV for 50%. Most radios, which don't
have an internal mike gain pot, don't even have a 50% setting.

>>>>>Actually it's called 'downward expansion', as I stated previously. But

>>
>>In other words a reduction of dynamic range.
>

>
>No, a reduction of dynamic range is called compression; i.e, the
>dynamic range is compressed. Expansion is just the opposite.

I know that. But your definition of "downward expansion" was:

"a term used to describe what happens to compression -below- the
average audio level. IOW, when you push the average audio level (i.e,
mic gain) into compression, the audio above that level is compressed
while the audio below that level is 'expanded'".

When you drive audio into compression, the dynamic range is reduced.

> (And yes,
>I can hear you whining already: ".....that's a contradiction, Frank!
>So before you get bent out of shape, notice that 'expansion' is not
>the same as 'downward expansion', as the latter can occur during
>compression -or- expansion.)

That little tidbit you managed to leave out of your definition, as you
clearly called out "into compression".

>> but for downward expansion to be applicable,
>>the audio must be already driven into compression, which it would not
>>be the case at 50% modulation.
>
>
>Wrong. This is a classic case of how screwing up one thing leads to a
>cascade of consequences......
>
>If the reference level is intended to be 0.5mV but you feed it 5mV

You are assuming that .5 mV is correct. There is no proof that it is.

>then you are forced to compensate by decreasing the gain of the mic
>amp. Because the mic gain is low, you need to drive the mic with more
>audio (literally, ten times more audio power) in order to push the

>the highs. So by changing the audio equalization you subsequently
>screwed up the proper operation of the AMC, because lower frequencies
>have a greater power level and will subsequently drive the AMC into
>limiting more often than normal.

That was fancy, but not quite accurate. First off, the mike level
would be first limited by the mike agc (What you refer to as the
"hard" limiter) before the mike pot. Any "compression" would occur
there before it even hits the AMC circuit. The AMC action occurs AFTER

VR6.

>The net effect was a combination of reduced mic sensitivity and
>increased AMC limiting; i.e, a nearly textbook case of downward
>expansion, with some extra 'mush' due to the AMC limiter working
>overtime.

The AMC doesn't come into play until you hit that 200 mV level and clamps the level to 100% modulation. it's certainly not a factor at 5 mV.

>Yet you, after 35 years of loud-n-proud expertise in the biz, didn't
>realize what was really happening, didn't care to find out, and jumped
>to the conclusion that the best way to compensate for the increased
>low freq response was to bypass the low-pass filter. Didn't anybody
>ever teach you that two wrongs don't make a right?

I told you before that the audio BPF was removed to make the radio mate better with D104 microphones, which were the mikes of choice for most of the locals.

>If you set the mic gain properly then you don't need to hold the mic
>with your teeth, the mic isn't overdriven, the spectral response of
>the audio is normal, there is no need to bypass the LP filter, and the
>AMC works as intended.

What about when the AMC is defeated, which is how most of the radios ran back then? What's your excuse then?

>> It is also not applicable in the case
>>of this CB, as the VR6 pot is after the mike compression stages.
>>That adjustment does not affect the amount of audio compression that
>>might occur before the pot (As a result of the TR18 and 19 mike AGC).
>>So it has no effect on the amount of compression the audio may have at
>>that point.
>
>
>TR18 and TR19 make a clamping (hard) limiter, not a compressor or AGC.

I don't want to get into (yet another) semantics debate. The action can be described as compression as the low end gain brings up low level audio what the "clamp" holds the maximum level to a hard maximum. That's compression in my book. In fact any CB radio's AMC circuit could be described as audio compression of sorts for the same reason. It increases average modulation while holding maximum to 100%.

>Notice the configuration of the transistors -- the gain is very high
>and the pair behave almost like a switch that's turned on when the
>audio is high enough to get past the forward voltage drop of D20 and
>turn on the switch.

The action of the circuit can also be described as a "fast attack, slow decay", as when you slam the clamp, there is a noticeable audible

"bump" in the transmit audio, and the gain takes a second or two to
come back to full. Changing C68 to a smaller value can improve the
action.

>> The AMC clipping (compression) happens after VR6, but at
>>the time the 50% modulation point is set, the AMC is adjusted to
>>maximum so it should have no effect.
>
>
>That's so the AMC won't have any effect on the modulation while

Nope. It'a a single 11,000 uF 35 volt electrolytic.

>What are the ratings on the cap? You do realize that the
>purpose is to -make- them fail under controlled conditions, don't you?

Of course. But how much "ripple" will it take to cause it to fail?

>>>It would depend on where compression begins. For CVA circuits it
>>>usually begins quite low. For limiters it will be high. Regardless,
>>>there was a noticable difference in my TRC-449 (which still has the LP
>>>filter intact).

>power amp through TR23) is a -soft limiter-.

Both of which contribute to the act of compression, I.E. the lower
audio levels are amplified, while the high levels are clamped to 100%
maximum.

No, I said that I homebrewed a DTMF decoder. That circuit used several
"chips", including a custom DTMF decoder. But I had to add other parts
to decode a 3 digit number and route it to a particular function.

>
>Well, there weren't too many DTMF chips in 1988. But even with the

How does one prove a negative? Besides the burden of proof is on the
accuser.

Not the same thing as finding evidence that I post outside of my given
times. A google search will confirm it.

Certainly. I agree. But some people do things differently. When 10/11
meters opens up, there is often only a handful of hams on 10, but
there are hundreds (or more) people on 11 meters. The DX potential is
better.

I don't condone it, but I do understand it.

There are a combination of "things" which can cause, or add to, the
oscillation. Moving the coil, isolating the final, and changing the
bias are all things that reduce the potential.

I'm glad it worked. Keep an eye on it, though as it might just be on
the hairy edge and could come back.

Dave

It's a matter of ego, saving face, and pride.

Hell, I never professed to "know all". I've learned in life that no
matter how strong you are, no matter how smart you are, no matter how
cool you are, there will always be someone stronger, smarter, or
cooler.

This is not a contest for me. All I want to do is offer help when and
where I can. I do find it curious when others attack my suggestions.

No one is exempt from that. The ones with the most imaginary lives are
also the same ones who hide behind anonymous pseudonyms.

> But once in a while a
>person like Dave gets to thinking that he is some sort of alpha male,
>sometimes manifested as a delusion of intellectual superiority just
>like you describe.

Let's address this curious accusation. First off, I do have some
"seniority" on this group, so I have been around for a while. But that
alone does not mean anything. But you are right, alot of people here
are full of crap, and try to promote "CB science" radio myths. I try
to set them straight. If that makes me an "alpha male", then it
applies to you as well, as you've done the same thing. So is what
you're saying essentially, is that you are now challenging my position
as "alpha male", by utilizing a more aggressive form of the same
traits you attribute to me?

Remember, YOU made this personal. Anytime you want to stop your silly crusade against me and attacking every point I make on various threads, I can resume some form of civility with you.

> The response he receives is nothing more than a
>normal societal reaction to put him back in his place.

And what "place" is that?

Yep, you can only repeat the same tired excuses that you "have the facts" for only so long before you get placed back on the discount rack.

The facts are that you are chasing me. I'm not chasing you.

>
>Frank, I am not going to waste my time chasing the opinions of some
>journalist.

Maybe that's your problem -- you can't differentiate between fact and
opinion. You see, Dave, some media source might state, "Bush ducked
the media today after yesterdays White House statement claiming that
outsourcing jobs is good for the economy". That statement is obviously
an opinion. Yet it contains a fact that can be verified; namely, the
White House statement supporting job outsourcing. So if you weren't a
hypcrite looking for excuses to avoid learning facts that conflict
with your "core beliefs", you could find and verify the FACT that such
a statement WAS made, and that it is a fact -regardless- of the source
of the opinion in which it was referenced.

But you don't.

>>We
>>have done this ping-pong game several times before but it seems you

>by repetition" fallacy. No matter how many times you claim to have the

>facts, the true fact is that all you have are the opinions and
>conclusions of OTHER people. You can list a dozen web sites and
>articles that "verify" the same "fact", but they are no more credible
>than the National Enquirer.

If that were true then the National Enquirer would be considered just
as credible as any other source of news. It isn't, therefore your
statement is bogus.

> And to think you cast off my sources as
>"propaganda", yet stick so emphatically to your sources as "absolute
>fact". That's a laugh Frank.

I noticed you qualified my remarks without my permission. Yet another
tactic to rationalize your bias.

>Unless you have connections inside the government, you have to base
>what you believe as "fact" on the accuracy of reporters and other
>"mouthpieces". If you can't see how this invites a great deal of spin
>and manipulation, you are more hopeless than I thought.

So -your- facts have been gleaned from sources inside the government?

>So tell me one more time about your "facts".

Eight times wasn't enough?

>>All my facts were referenced and can be cross-referenced to a wide
>>number of unbiased sources
>
>Says who? Who determined that these sources are "unbiased"?

You do. Despite your vehement declarations that any media source is
biased if it does not support your "core beliefs", there are plenty of
unbiased sources, not the least of which are republican sources that
openly admit certain things to be factual. One such example being the
Bush administration's low-keyed but clear declaration that there were
no WMDs in Iraq, a fact which you have yet to admit yourself.

>> Your 'fact' consisted of a website with a
>>forged document.
>
>That was one of MANY.

By your -own- standards, you can't expect anyone to give any more
credibility to that website than you do to CBS news.

>>> You tend to believe one side, while I tend to favor
>>>the other. There is nothing wrong with that. But don't tell me I'm
>>>wrong because I don't believe the same stuff you do.

>>facts.

>
>No you gave counter opinions.

Bush was never convicted of a DUI? He didn't fail twice in the oil
business? ......oh hell, we've been through this several times before
Dave, and each time I have proven that what I stated were indeed
facts. You simply refuse to accept them despite the evidence.

>>You discarded them as "biased" without even trying to verify
>>them as facts.
>
>Who said I didn't try?

I did. Pay attention, Dave.

> I recognized the same old worn out excuses,
>that I've heard since the Iraq war started.

And it's clear that you didn't bother to check them out then, either.
Now those "old worn out excuses" are yours because of your inability
to accept just the -possibility- that your political leader was
leading you, and the rest of the country, in a very bad direction.

>>You didn't even TRY, Dave. You lied -- your beliefs are
>>NOT based on facts -- on the contrary, your facts are based on your
>>BELIEFS.
>
>No more than yours are Frank.

And that's why I changed my position on the issue, right?

>>private forum without the support of your lap-dog and imaginary
>>admirers.
>
>Ego? Please (again). This showcases your emotional attachment to this
>whole situation.
>
>First off Frank, I have no need or desire to take this to E-mail.

That's obvious, for the reasons I already stated.

> I'm
>not the one who desires enlightenment. You have been chasing me since
>the election, and have grown bitter, crass, and highly emotional. Very
>atypical from how you used to behave.

.....um, I hate to break this to you, Dave, but I have -always- been
bitter, crass and highly emotional, as anyone here can attest. The

only reason you see a difference is because my boot is up -your- ass
instead of someone else's.

> I seriously stung you (And it
>was not intentional. I had more respect for you at the time), and
>you've been chasing me like a rabid dog ever since. From
>troubleshooting radios, to speed traps, to who know what else, If I
>say "zig", you say "zag", and make every effort to try (however
>poorly) to prove me wrong. You've even aligned yourself with one of
>your worst former adversaries in the pursuit of this goal.

You claimed your beliefs were based on facts and logic. You lied.
That's what it all boils down to. You're a hypocrite, Dave -- pure and
simple.

>Right now I am enjoying your attention. Eventually, I'll tire of it,
>and I will just stop responding, in the same vein that I treat Twisty.

You claimed that you would ignore Twisty many years ago, yet you still
engage him on cue. But I do believe that you will eventually ignore me
when you finally run out of excuses, just as I predicted in an earlier
post.

One other thing can cause. Seems when I had it connected to a dummy load, or in my car to the amp, it didn't happened. Which means a perfect match eliminated the problem. So high SWR can cause it. Even though mine was about 1.3-1.5 across the band.

Can't wait to get that IMAX in the trees.

Which is exactly what the prevalent social order did to Galileo,
Columbus, Aristotle, and a host of other people who -did- have the
facts but were dismissed in favor of "core beliefs".

>The facts are that you are chasing me. I'm not chasing you.

Because it's my "core belief" that you really -are- intelligent, and
unless someone challenges that intelligence you will just ignore it
(like you ignore facts and logic) until your gray matter falls into
disrepair. That would be a waste, IMHO.

>something. Experience will modify his analytical "flowchart", when
>working on devices with similar problems.

A "blank slate" is -exactly- what you begin with when troubleshooting.
And you bring up the most perfect example: a flowchart. I'm sure there
are a lot of backyard mechanics in this group, and most of them have a
Chilton's or Hayne's laying around somewhere. Just pick one up and go
to the troubleshooting sections. There you will find just what you
describe -- a flowchart -- a systematic progression of testing a
faulty system. It is -not- based on probability. It is based on logic.
And the reason they use a flowchart is because a flowchart is a tool
of -logic-, NOT statistics. If troubleshooting was based on statistics
the troubleshooting pages would be filled with graphs, charts and
plots, and the procedure would be to replace one component after
another, in order of their likelyhood of failure, until the problem no
longer exists. But that's not what's in those books. And the same
kinds of troubleshooting flowcharts are used in service manuals for
electronic equipment, too. They use a -logical- progression, not a
statistical analysis.

That excuse might work if the focus of Forensics clubs had changed
from speech to science. The definition of 'forensic science' is well
established and -your- definition is wrong (despite any "core belief"
to the contrary).

>>>>Odd that they should be the same since they use different mics. So how

>mic gain) into compression, the audio above that level is compressed
>while the audio below that level is 'expanded'".
>
>When you drive audio into compression, the dynamic range is reduced.

You didn't read the entire paragraph. Here, I'll quote the part you
didn't read the first two times: "[W]hen you push the average audio
level (i.e, mic gain) into compression, the audio above that level is
compressed while the audio below that level is 'expanded'"

>> (And yes,
>>I can hear you whining already: ".....that's a contradiction, Frank!

>
>You are assuming that .5 mV is correct. There is no proof that it is.

I hadn't even finished with the first sentence and already you start
with the excuses. That's pathetic, Dave.

>>then you are forced to compensate by decreasing the gain of the mic
>>amp. Because the mic gain is low, you need to drive the mic with more
>>audio (literally, ten times more audio power) in order to push the
>>radio to 50% modulation. But in order to drive the output of the mic
>>higher you must either talk louder or move the mic closer to your
>>mouth. Assuming that your subconscious mind made the compensation
>>automatically (as the subconscious mind usually does), you moved the

>>mic closer. But your conscious mind failed to consider one of the
>>basic characteristics of the dynamic mic -- when you move the mic
>>closer to your mouth you increase the spectral lows -much- more than
>>the highs. So by changing the audio equalization you subsequently
>>screwed up the proper operation of the AMC, because lower frequencies
>>have a greater power level and will subsequently drive the AMC into
>>limiting more often than normal.
>
>That was fancy, but not quite accurate. First off, the mike level
>would be first limited by the mike agc (What you refer to as the
>"hard" limiter) before the mike pot. Any "compression" would occur
>there before it even hits the AMC circuit.

Wrong. Don't forget that you have the mic gain turned -way- down
because your input spec was too high. So the mic audio isn't going to
come close to getting hit by the first limiter unless you slam the mic
on the table.

> The AMC action occurs AFTER
>VR6.
>
>
>>The net effect was a combination of reduced mic sensitivity and
>>increased AMC limiting; i.e, a nearly textbook case of downward
>>expansion, with some extra 'mush' due to the AMC limiter working
>>overtime.
>
>The AMC doesn't come into play until you hit that 200 mV level and
>clamps the level to 100% modulation. it's certainly not a factor at 5
>mV.

Which means absolutely nothing. You are ignoring the fact that the
audio level of the mic during speech isn't limited to 5mV, or even
0.5mV. I never suggested that 5mV could turn on the AMC. I -did-
mention that because the mic gain is set so low that you needed to
compensate by decreasing the mic proximity, which boosts the low
frequencies disproportionately. And since those low frequencies have a
much higher level than your average speech audio level, it will be
those low freqs that drive the AMC into limiting at a lower -average-
audio level than anticipated. Do I need to draw a picture?

>>Yet you, after 35 years of loud-n-proud expertise in the biz, didn't
>>realize what was really happening, didn't care to find out, and jumped
>>to the conclusion that the best way to compensate for the increased
>>low freq response was to bypass the low-pass filter. Didn't anybody
>>ever teach you that two wrongs don't make a right?
>
>I told you before that the audio BPF was removed to make the radio
>mate better with D104 microphones, which were the mikes of choice for
>most of the locals.

You said, "I also found the transmit audio to be a bit mushy and compressed. The main reason for that is an audio bandpass filter installed between TR20 and TR22." You were wrong. The main reason the audio sounded "mushy and compressed" is because you misaligned VR6.

And for the record, the filter between TR20 and TR22 is a low-pass filter, -not- a band-pass filter.

>>If you set the mic gain properly then you don't need to hold the mic
>>with your teeth, the mic isn't overdriven, the spectral response of
>>the audio is normal, there is no need to bypass the LP filter, and the
>>AMC works as intended.
>
>What about when the AMC is defeated, which is how most of the radios
>ran back then? What's your excuse then?

Was the AMC defeated in the radio you were discussing? If not, then your point is irrelevant. If it -was- then much of the same still applies -- you will still have boomy audio, and it would be distorted somewhere else down the path, perhaps at the mixer or crystal filter (which, BTW, is responsible for low-frequency audio roll-off).

>>> It is also not applicable in the case
>>>of this CB, as the VR6 pot is after the mike compression stages.
>>>That adjustment does not affect the amount of audio compression that
>>>might occur before the pot (As a result of the TR18 and 19 mike AGC).
>>>So it has no effect on the amount of compression the audio may have at
>>>that point.
>>
>>
>>TR18 and TR19 make a clamping (hard) limiter, not a compressor or AGC.
>
>I don't want to get into (yet another) semantics debate.

If you are going to use the terms then use them according to their correct definitions. That's one of the foundations of communication.

> The action
>can be described as compression as the low end gain brings up low
>level audio what the "clamp" holds the maximum level to a hard
>maximum.

That might work except that neither of the limiters control the audio through a variable gain -- they simply prevent the audio level from exceeding a specified value. That's called 'limiting', and it occurs one wave at a time. 'Clipping' is a harder form of hard limiting.

'Compression' is a type of AGC; i.e, the output signal controls the gain of the amp. A CVA (Constant Volume Amplifer) is a type of compression that is commonly used in the broadcast industry for speech. Compression works by controlling the average level of the audio, not by limiting the peaks.

> That's compression in my book.

You need a new book.

> In fact any CB radio's AMC
>circuit could be described as audio compression of sorts for the same
>reason. It increases average modulation while holding maximum to 100%.

It has no effect on the gain of the audio stages. Both limiters in
this radio do nothing but limit the peaks and filter the resultant
harmonics (at least that's what is -supposed- to happen assuming you
don't bypass the LPF). Your average modulation is increased only by
talking louder into the mic.

>>Notice the configuration of the transistors -- the gain is very high
>>and the pair behave almost like a switch that's turned on when the
>>audio is high enough to get past the forward voltage drop of D20 and
>>turn on the switch.
>
>The action of the circuit can also be described as a "fast attack,
>slow decay", as when you slam the clamp, there is a noticeable audible
>"bump" in the transmit audio, and the gain takes a second or two to
>come back to full. Changing C68 to a smaller value can improve the
>action.

Or just don't "slam the clamp". Even better, run a CVA between your
mic and the radio.

>>> The AMC clipping (compression) happens after VR6, but at
>>>the time the 50% modulation point is set, the AMC is adjusted to
>>>maximum so it should have no effect.
>>

>>
>>
>>Well that's no good. Do you have more than one cap hooked up at the
>>same time?
>
>Nope. It'a a single 11,000 uF 35 volt electrolytic.

Holy crap! How many of -those- do you see in CB radios? LOL! Anyway,
the AC resistance is 0.12 ohms @ 120Hz, which puts your AC current at
60mA, and therefore it's dissipating 30mW..... hardly enough to do any
damage, especially to a cap that's almost as big as the radio itself.

Try a smaller cap. Maybe something along the lines of what you might
find in a CB radio, and more typical of a cap that you might find in
"shreds". How about 2.2uF, 22uf, or even 100uF? I'm sure you have a
few of those laying around, don't you?

>>What are the ratings on the cap? You do realize that the
>>purpose is to -make- them fail under controlled conditions, don't you?
>
>Of course. But how much "ripple" will it take to cause it to fail?

That's what we are trying to determine, right?

>>>>It would depend on where compression begins. For CVA circuits it

Try it. And test it with a stock mic as well as that chrome-plated
lollipop.

>>>For the reason you stated before, personal pride.
>>
>>
>>There you go! There's a reason to design a receiver from scratch!
>
>I guess. I prefer to take existing circuits and then modifying them
>for improved performance.

Chevy used to make V6 engines by hacking two cylinders from a V8.
Those engines weren't very good. Then they decided to build a V6 from
scratch, the result of which is the now famous V6/60-degree family.

>>>>>Did I say that? No. So why jump to a (wrong) conclusion. BTW, I

3134. Just say NO to Bin Ladin!!!!

Newsgroup: rec.radio.cb
Date: 2005-02-21 17:34:34 UTC
From: angelonmyshoulder61@yahoo.com
Message-ID: <1109007274.357700.106760@o13g2000cwo.googlegroups.com>
Source record: 196774

Hi all I am helping a friend promote a web site. You see a childhood friend of hers lost her husband at the World Trade Center on Sept. 11, 2001. She has run into some hard times and my freind wants to help her. So she came up with the idea to market Just say NO to Bin Ladin dartboards and punching bag covers. Not only is she going to donate part of the proceeds to her freind but an additional part of the proceeds will go to the Firemans Fund. If you could take the time to check out the web site it would be much appreciated!! The web site addy is:

http://www.angelonmyshoulder.4t.com

Thanks so much everyone!!

3135. Rolling skip

Newsgroup: rec.radio.cb
Date: 2005-02-21 18:12:49 UTC

Hi,

Anyone know of the Dirland SSB setup it looks like the Galaxy with the digital readout and channel number.

Any help? specs or any information welcomed.

Mike H.

Oh Randy C'mon now. Unproven? Were you saying that last year in the post
season? He is an excellant addition to a rather bad team of recent years
passed. I'm not saying we are going to the playoffs this year but we
will be entertaining. Piazza, Reyes, Wright (who hit 14 dingers in 69
games last year), Cammeron, Floyd and Mankexxxxx from the R Sox.
Glavine, Benson, Pedro, Trachsel & Zambrano. Not a bad starting 5 but
the bullpen will suck wind...

I also found it ironic a bit. I was on channel 38 LSB, putting out about 25-30
watts peak, for which I have been called an outlaw. Yet, the 2 loudest people on
that channel today, were using a Kenwood and Yaesu radios.

Han anyone ever seen a Kenwood or Yaesu CB?

Vinnie S.

No, but he's certainly not worth what signed for. That's why he lost in
here. He'd have busted the hispanic market wide open in this area. Not sure
he'll have that effect up north, but he was liked here.

He is an excellant addition to a rather bad team of recent years

>Hey Twisty what the hell is a lid?

A lid is a poor operator. A lousy hammie. Origin varies by mileage.
A common accepted belief is one who could not properly send the word
"lid" on landline. It sounded like "DD" .
Another belief is poor ops who would practice on Prince Albert cans in
order to better clarify the metallic rap of the tin. And yet another
belief of its origin is an op that could not send well, "put a lid on"
(slowed down) traffic. It has come to define any poor hammie, whether by
operation, technique, behavior, or demeanor.

The Hispanic market is huge in NYC and its environs. There are 4 spanish
language TV stations here.
He was brought here for two reasons, win and put fannies in the seats.
And yes he is worth what the market can absorb. Sucks for small teams
but thats a reality. Either way pitchers and catchers reported so spring
is close. Hope so after 7" of snow today...

I have to explain things in terms Dave can understand. Since he didn't
know what 'fused' meant, I thought it best to solidify his recent
education on the subject by using the terms together -- reinforcement
by association.

I don't know why they don't sit at the side of the road and use a
stopwatch, and prefer instead to use an electronic device that does
the math for them. All I know is that they do. For the "whys" you need
to ask them.

>the time", or "in a vast majority of cases"? No.

Nonetheless, the state of Pa requires that LEO give at least a 5 mph leeway for speeders pursuant to the conditions set forth in 3368(c)(4). (Which is most of the time).

>Your statement was wrong, Dave. That much is clear to "the vast

>-can- prove that a man walked on the moon.

Really? Then prove to me that a man walked on the moon Frank.

BTW, just because you can pull up thousands of news reports that claim
it, that does not PROVE it.

We accept as fact that an American walked on the moon. But we only
know it due to reports that were released to us by the news media.

There was a movie once, Capricorn One was the name, if my memory
serves me, where NASA, trying to save face (and future funding) in
light of the mandate to place a man on the moon, found that they just
weren't ready, so they decided to "fake" it by sending up an empty
rocket, and then filming the moon shots from a stage in a hanger. The
drama ensued when the unmanned rocket unexpectedly burned up on
re-entry and they were forced to kill the astronauts to protect the
secret.

It was an interesting work of fiction, but it underscores just how
vulnerable we all are to information that is "provided" to us by the
news media and the government.

You really need a res fresher course on what is considered a fact.

That means nothing. The difference between anticipation and reaction
is the point where you decide to "hit" the switch. You are still
limited by human reaction time constraints. Timing by reaction often
results in "late" hits. While timing by anticipation often results in
"early" hits.

Of course not, since the statement is absurd. But if your neighbor
Ralph told you that he saw a person messing with your car, you might
be inclined to believe him.

>>and trust their judgement. They have no reason to lie to me.
>
>
>There's a reason why 'hearsay' is not permitted in court. Maybe you
>can figure out why.

I know why. But the testimony of recognized people (such as cops) is
often taken as fact. I guess it all depends on the person's
credibility. You don't know the cops that I know, therefore you doubt
their credibility. I, on the other hand, know them well, and some for
over 25 years. So I take their word as fact.

>>
>>Sure they are. Many sites like that are set up to help people beat

I can give you more sites than you'd care to read. Your answer will be
the same each time. It's funny how you regard the things you don't
want to hear as "hearsay", "propaganda" etc, yet sites of equal
"credibility" which support your core beliefs, you are much more
likely to consider as "facts".

>>>Wrong. You "speculated" that I'm a liberal. By your own standards,

Irrelevant and stretching. But when you support the political
philosophies of a liberal, you are either a liberal yourself, someone
who makes protest votes, or someone who lacks sufficient understanding
of political ideologies.

>>Your definition of what you claim to be politically, is a classic case

I can very well admit when I've made a mistake, as I am about to do in
another thread. But so far, you have not made a convincing case that
I've made any, your opinion notwithstanding.

Ah, yes, the "peeling away the layers of the onion theory" I am well
versed in the practice and I do it all the time. When you apply it to
all the smear which has been hurled at Bush, the nugget of fact
underneath those layers is often very small, and doesn't support the
erroneous and highly opinionated conclusion of the reporter.

>statement is bogus.

The only difference is that the National Enquirer is considered by
most intelligent people to be "sensational journalism". The other
sources just haven't been fully exposed yet. But the lid is slowly
lifting. After Jayson Blair of the New York Times, and things like
"Rathergate", the American people are slowly realizing that the news
media is not objectively reporting facts, they are spinning the facts
to promote their own political agendas.

And you fall for it.

What the hell are you talking about? So far no WMD have been found.

What does that prove? They were never there? Or maybe they were hidden very well. Remember that absence of evidence is not necessarily evidence of absence.

Once again, hindsight is always 20/20. We didn't know what we know now in 2003. Another fact that you conveniently ignore is that most of the leading voices in our congress (democrats specially when Clinton was in office) and the leaders of the world agreed that the existence of Iraqi WMD was highly probable, as far back as 1998. Would you like to see the quotes?

Of course that's a possibility. But it's too early in the game to make
a positive determination. You and I can speculate as to the true
motives of the war, and whether it was the "right" direction. But
there are no facts either way, because history is still being written.
Terrorism is real. Iraq is real. Bush took a strong stand and I
believe it was the right one.

3164. The Roger Beep Issue: The final word.

Newsgroup: rec.radio.cb
Date: 2005-02-22 13:18:46 UTC
From: Dave Hall <nojunk_n3cvj@ptd.net>
Message-ID: <fpbm11pgvhtji7rr9kacsqlcsija7ngsht@4ax.com>
Source record: 196804

As most of you know, there has been some question as to the legality of Roger Beeps on CB radio. Some have claimed that they are legal, while others have had some doubts. There are no FCC rules which specifically allow them, and very few radios come equipped with them.

The banter back and forth has not resolved the issue as it was based purely on speculation and lacked any real facts. So, I decided to got straight to the authority on the subject, and wrote to the FCC for a clarification.

I have finally received a response to the question, and with my hat in my hand, I must now admit that I was wrong about Roger beep use. It would seem that the FCC is ok with roger beeps as long as the radio was not modified to install it (External units only) and that when using them, they are used in accordance with their intended function (As an ETS signal). Deliberately keying just to make the beep noise would be considered an unauthorized use.

The text of the actual response from the FCC follows:

>electronic equipment, too. They use a -logical- progression, not a
>statistical analysis.

Why do you think I used the flow chart example? It is a representation
of a logical progression. The exact method that I use, whether the
fault is a radio, a car, plumbing or whatever.

There are, however, some shortcuts that you can take, when you
recognize a particular fault. It saves you the trouble of following
some unnecessary steps.

I had a problem in the automatic transmission in the wife's Chevy
Astro Van a few years back. Seems that when you would drive it for an
extended period of time, the transmission would start shifting hard,
and the MIL light would light up and set an P1870 trouble code in the
ECU. Looking up the code, it stated that is was a transmission
slippage code, and the hard shifts were a result of the system
pressure increasing to compensate for the slippage. The only remedy
that the dealer would offer was a $2000 replacement transmission. I
turned to the web and started looking for other people who had had
similar problems (experience). I found out a lot. It seems that the
problem was caused by the PWM valve (or more accurately the bore for
it) for the lockup torque converter clutch. This was in the
transmission valve body and was made of aluminum and after about
45-50K miles, it would have worn sufficiently enough to cause the
problem that I had. I found that a company (Sonnax) sells a bore
reamer and a replacement steel sleave that can be installed in the
valve body, which would restore proper operation. So for about $90, I
bought the parts and performed the work (Dropping a valve body is a
bit messy though). The problem was solved.

Now, would I have been able to get to this point by logical
progression alone? Maybe. But by tapping the experience of other
people, I was able to solve the problem without a lot of mistakes and
expense.

This is just one of many such examples.

In the alignment procedure, it is specified as 5mV for 50% modulation.
The same as the TRC 457/458.

>level (i.e, mic gain) into compression, the audio above that level is
>compressed while the audio below that level is 'expanded'"

Yes. So we're still talking about audio that is in compression. What
you have described is the net effect of high gain (Which "expands" the
lower level audio), and a limiter clamp which "compresses" the audio
to below a preset level.

>>> (And yes,
>>>I can hear you whining already: ".....that's a contradiction, Frank!

No, it's a typical example of how you base a logical conclusion on a potentially faulty premise.

>>>then you are forced to compensate by decreasing the gain of the mic
>>>amp. Because the mic gain is low, you need to drive the mic with more
>>>audio (literally, ten times more audio power) in order to push the
>>>radio to 50% modulation. But in order to drive the output of the mic
>>>higher you must either talk louder or move the mic closer to your
>>>mouth. Assuming that your subconscious mind made the compensation
>>>automatically (as the subconscious mind usually does), you moved the
>>>mic closer. But your conscious mind failed to consider one of the
>>>basic characteristics of the dynamic mic -- when you move the mic
>>>closer to your mouth you increase the spectral lows -much- more than
>>>the highs. So by changing the audio equalization you subsequently
>>>screwed up the proper operation of the AMC, because lower frequencies
>>>have a greater power level and will subsequently drive the AMC into
>>>limiting more often than normal.
>>
>>That was fancy, but not quite accurate. First off, the mike level
>>would be first limited by the mike agc (What you refer to as the
>>"hard" limiter) before the mike pot. Any "compression" would occur
>>there before it even hits the AMC circuit.
>

>Wrong. Don't forget that you have the mic gain turned -way- down
>because your input spec was too high. So the mic audio isn't going to
>come close to getting hit by the first limiter unless you slam the mic
>on the table.

Hello McFly. The mike limiters are BEFORE the mic gain pot. If I was increasing the level to compensate for the setting of the pot, the mike agc circuit would be compressing the audio. But considering that the real compression does not start until you are in the 200 mV area, that doesn't really apply at all.

>
>
>> The AMC action occurs AFTER
>>VR6.

>
>You said, "I also found the transmit audio to be a bit mushy and
>compressed.

My subjective term. Perhaps the term "nasally" would be more
descriptive. How about "talking through a paper cup"?

> The main reason for that is an audio bandpass filter
>installed between TR20 and TR22." You were wrong. The main reason the
>audio sounded "mushy and compressed" is because you misaligned VR6.

Not it's not, since most people cranked VR6 wide open for the most
gain. You forget the typical CB mentality. AMC doesn't come into play
because it is usually defeated. VR6 is cranked wide open, so that
negates your earlier scenario. VR6 is not that critical. If it were,
they wouldn't make it a user operated front panel control like on the
Cobra 139XLR. You're picking nits that just aren't there.

I made the radios sound good for the people who used them. They're
paying the bill, so they get what they want.

>And for the record, the filter between TR20 and TR22 is a low-pass
>filter, -not- a band-pass filter.

Ok, I stand corrected. It is a LPF.

>>>If you set the mic gain properly then you don't need to hold the mic

>applies -- you will still have boomy audio, and it would be distorted
>somewhere else down the path, perhaps at the mixer or crystal filter
>(which, BTW, is responsible for low-frequency audio roll-off).

What? The audio on AM is not applied until the driver and final
stages. It is high level. It does not pass through any crystal filter.
Only the carrier passes through that. The audio passes through the
LPF, through the TR22 audio switch, and on to the IC4, upc1156 audio
power amp, where it is then applied to the modulator transformer T1.

You chastise me for a perceived lack of understanding of the basics,
yet you demonstrate a clear lack of understanding of the more
advanced.

>>>> It is also not applicable in the case

>>maximum.
>
>
>That might work except that neither of the limiters control the audio
>through a variable gain -- they simply prevent the audio level from

>exceeding a specified value.

And how do they do that? By controlling a variable attenuator on the input of the stage. I'd say that fits the definition of controlling gain.

> That's called 'limiting', and it occurs
>one wave at a time. 'Clipping' is a harder form of hard limiting.

Clipping is actually a distortion to the wave.

>
>'Compression' is a type of AGC; i.e, the output signal controls the
>gain of the amp. A CVA (Constant Volume Amplifer) is a type of
>compression that is commonly used in the broadcast industry for
>speech. Compression works by controlling the average level of the
>audio, not by limiting the peaks.

In either case, the overall gain of the stage is controlled. Whether you actually vary the gain of the amplifier, or you shunt some of the input level in response to a sensor on the output, the end result is the same.

Again, you like to argue semantics.

>> In fact any CB radio's AMC
>>circuit could be described as audio compression of sorts for the same
>>reason. It increases average modulation while holding maximum to 100%.
>
>
>It has no effect on the gain of the audio stages. Both limiters in
>this radio do nothing but limit the peaks and filter the resultant
>harmonics (at least that's what is -supposed- to happen assuming you
>don't bypass the LPF). Your average modulation is increased only by
>talking louder into the mic.

The gain of the internal pre-amps is set to maximum. When you talk, if your voice exceeds the preset level (in this case 100% modulation), the limiters reduce the input signal to the respective audio stage. Overall gain IS adjusted.

>>>Notice the configuration of the transistors -- the gain is very high
>>>and the pair behave almost like a switch that's turned on when the
>>>audio is high enough to get past the forward voltage drop of D20 and
>>>turn on the switch.
>>
>>The action of the circuit can also be described as a "fast attack,
>>slow decay", as when you slam the clamp, there is a noticeable audible
>>"bump" in the transmit audio, and the gain takes a second or two to
>>come back to full. Changing C68 to a smaller value can improve the
>>action.

>Or just don't "slam the clamp". Even better, run a CVA between your
>mic and the radio.

An external speech compressor? Sure, but the one internal works just
fine. There's more gain than anyone really needs. "Slamming the clamp,
is one way to keep average modulation levels high without creating
overmodulation. That's the whole point of speech compression.

Actually no. The cap is a more modern design and it's a little over an
inch in diameter, and about 4 inches long.

>Try a smaller cap. Maybe something along the lines of what you might
>find in a CB radio, and more typical of a cap that you might find in

>few of those laying around, don't you?

Sure. I just picked a common cap used as a filter in a power supply.
That's where it came from. I can put a smaller cap on. With less
filtering capacity, the ripple will increase.

>>>What are the ratings on the cap? You do realize that the

I'm going to use my audio generator. That's the only way to ensure an
accurate measurement of level.

>
>Chevy used to make V6 engines by hacking two cylinders from a V8.

They still do. The 4.3 liter V6 is a hacked off 5.7 V8.

>Those engines weren't very good.

Au contraire. The 4.3 is a very reliable engine. Gobs of torque too.

>Then they decided to build a V6 from
>scratch, the result of which is the now famous V6/60-degree family.

Which engines are they?

I think you are confusing this with the failed attempt that GM made to
convert a 5.7 gasoline engine into a diesel. The stresses from
increases in compression was too much for the lower end of the
basically gasoline block, and it had all sorts of reliability issues.
Then they went to the drawing board and the 6.2 diesel was the result.
A much better engine.

>>>You will know just as soon as you figure out what I said.
>>
>>Whew! talk about evasive.
>
>
>Whew! Talk about a reading dysfunction!

In what way? You are deliberately vague and evasive, and you then
accuse me of "dysfunction" for not pulling a rabbit out of my hat?

>>>The only "building block" I had was the GPS chip. Everything else had
>>>to be designed from the ground up with special attention to weight,

Hey, if I had a choice between the street and working at Wal-Mart, I'd work there in a heartbeat. When you have a family to support, it doesn't matter what you do, and how long you have to do it. That's what responsibility is about.

>>>If you're so curious about my current employment why don't you just

That's not what you said Frank. Here it is again to refresh your memory:

Begin Frank's post**

The case where I have proven, and you have just admitted, that your political opinions are not those of a reasonable person.

>Giving up already? I was just starting to enjoy this.....

Sorry to disappoint you but I found another job and have other responsibilities that are demanding a lot of my time, so I am left with little time to waste on the newsgroup anymore. You would know what I mean if you really had a job and custody of your kid.

End Frank's post**

Now, who has a reading problem? Or should it be a memory problem?

>>No, I said that I homebrewed a DTMF decoder. That circuit used several
>>"chips", including a custom DTMF decoder. But I had to add other parts

>implicates him of any crime?

No proof, but human nature tends to support the notion that people
hide what they don't want known. If you have nothing to fear, then why
hide it? Especially when your side hypocritically demands the same of
Bush.

>>Not the same thing as finding evidence that I post outside of my given
>>times. A google search will confirm it.
>

It's "Frankspeak".

To most of us, fused refers to something that is shorted. Frank uses a
slightly different set of vocabulary.

It's ok. He's on the left coast.

Do you want absolute proof? or just something more substantial than me
saying that someone else told it to me?

>BTW, just because you can pull up thousands of news reports that claim
>it, that does not PROVE it.

So if if -you- pull up thousands of news reports that claim a
stopwatch is almost never used to catch speeders in PA, I should not
accept it as proof. Right? Well then, where does that leave your claim
that a couple cops told you so?

>We accept as fact that an American walked on the moon. But we only
>know it due to reports that were released to us by the news media.

Not to mention all the hams that tracked the mission, the instruments
that were left behind and continued sending data afterwards, the
reflectors used for laser experiments, etc, etc. Nope, none of that
amounts to proof if it isn't consistent with your "core beliefs".

You claimed to use the word "biped" as a classification. Humans are
classified as bipeds. A classification isn't suspended for unnatural
exceptions -- which, BTW, was the basis of your argument. But you were
not making a classification when you claimed that PA cops are
"required" to give leeway to speeders, so your analogy is moot. Even
if your statement -could- be considered a classification, your
argument is -still- flawed because, as I stated before, mechanical
devices and electronic devices are classified differently.

Not according to the DOT. They conducted a study that showed how
anticipation was far more accurate than reaction, just as described in
the page I cited. In fact, the DOT provides training material for cops
learning to use a stopwatch. They also describe how accuracy is
improved as the distance between the markers is increased, a tactic
which is used to invalidate arguments made by people trying to
discredit the method based on mathematics. They also note (as stated
in the cited page) that tolerances are granted in favor of the
suspected speeder. This makes the stopwatch method very accurate,
reliable, and fair.

>>>Then you'd better apply the same standards to your political
>>>arguments, as there is very little verifiable facts there.
>>
>>
>>Only because you choose not to verify the facts for yourself.

>
>I have done more than that. Depending on who tells the story, the
>message is significantly different.

For example?

>>>So basically you are telling me that what I've heard is meaningless
>>>because you don't know the cops who told me?
>>
>>
>>If I said that my neighbor Ralph said that he can receive the thoughts
>>of Scottish Terriers through a metal tooth filling, would you consider
>>it a fact? I don't think so (not unless it coincided with one of your
>>"core beliefs").
>
>Of course not, since the statement is absurd. But if your neighbor
>Ralph told you that he saw a person messing with your car, you might
>be inclined to believe him.

I might be inclined to check my car. That doesn't mean I believe him,
only that I believe that what he said is possible. And since I can
accept the possibility, it would be prudent to verify his story. But
even if his story is absurd, that's not a valid excuse to dismiss the
possibility. I probably wouldn't waste my time trying to verify that
he can hear dogs with his teeth, but if -he- believes that he hears
dogs then I would certainly pay a bit more attention to his behavior.

>>>Well, maybe you can't except it, but I can, since I know the sources
>>>and trust their judgement. They have no reason to lie to me.
>>
>>
>>There's a reason why 'hearsay' is not permitted in court. Maybe you
>>can figure out why.
>
>I know why. But the testimony of recognized people (such as cops) is
>often taken as fact. I guess it all depends on the person's
>credibility. You don't know the cops that I know, therefore you doubt
>their credibility. I, on the other hand, know them well, and some for
>over 25 years. So I take their word as fact.

So I should take their word as fact because -you- do? I don't think
so, Dave. The problem is that I don't take -your- word as fact, mainly
because you never provide any facts other than hearsay (which is
another word I think you should look up before you use it again).

>>>Sure they are. Many sites like that are set up to help people beat
>>>speeding tickets. But some of that information should be considered
>>>skeptically.
>>
>>
>>But why? Are they any less credible than your third-hand claims by
>>anonymous sources? Along the same train of thought, have you found a

>>website yet that can provide some -facts- about Kerry instead of vague
>>emails from nameless people?
>
>I can give you more sites than you'd care to read.

Sock it to me!!!

> Your answer will be
>the same each time.

Another assumption.

> It's funny how you regard the things you don't
>want to hear as "hearsay", "propaganda" etc, yet sites of equal
>"credibility" which support your core beliefs, you are much more
>likely to consider as "facts".

What facts did I provide that could not be verified?

>>>>Wrong. You "speculated" that I'm a liberal. By your own standards,
>>>>that means you must have enough "solid information" about two things;
>>>>first, you must know enough about liberals to be able to classify
>>>>them. I find that doubtful since you are a self-proclaimed
>>>>conservative republican and have repeatedly demonstrated that you have
>>>>no clue as to the precepts of liberalism. Second, you must have enough
>>>>"solid information" about me to know my ideologies, which you clearly
>>>>don't.
>>>
>>>Contrary to your erroneous statement, I know a lot about liberals. I
>>>know how they think, I know what they consider "ideal" and I know why
>>>they think that way. If you are going to fight something, you are best
>>>served knowing the enemy.
>>
>>
>>Then you don't know squat because you took up a fight with someone
>>that wasn't your enemy, Dave.
>>
>>
>>>I called you a liberal, because you voted for one, and vigorously
>>>defended another.
>>
>>
>>Liberals are also known to sleep when they are tired, eat when they
>>are hungry, and shit when their bowels move. I guess that makes -you-
>>a liberal, too, Dave.
>
>Irrelevant and stretching.

It was implied.

> But when you support the political
>philosophies of a liberal, you are either a liberal yourself, someone
>who makes protest votes, or someone who lacks sufficient understanding

>of political ideologies.

Is it beyond the realm of possibility that I can think independently?
That I don't need to have my beliefs dictated to me by any political
or religious ideology? That I refuse to let myself be locked into any
side of a partisan debate? If I happen to agree with a position of one
political party, does that necessarily exclude me from agreeing with
any position from a different party? Or does the basic concept of
'independence' conflict with your "core beliefs"?

>>>Your definition of what you claim to be politically, is a classic case
>>>of denial. It's funny how some liberals are ashamed to admit what they
>>>really are.
>>
>>
>>You must have missed my postings over the past several years -- I have
>>never been ashamed to admit anything. In fact, I've probably admitted
>>more than most people really wanted to know. And after arguing with
>>Twisty for much of that time, I even admitted that he was right on the
>>Bush topics. Yet you can't even admit when you make one single little
>>mistake. It is -you- that is in denial, Dave, not me.
>
>I can very well admit when I've made a mistake, as I am about to do in
>another thread. But so far, you have not made a convincing case that
>I've made any, your opinion notwithstanding.

Ok, then I'll show you just how wrong you are. Here are my opinions
about Kerry:

I think he is/was a Republican shill. He conceded the election early,
before the count was definitive, throwing both the Democratic party
and Edwards totally off guard (and right after Edwards made a speech
that they would not concede the election until all the votes were
counted). Kerry & family then bailed to Governor Arnold's place for a
nice weekend vacation (remember that Arnold was a strong and outspoken
proponent of the Bush campaign). Kerry was also visibly absent during
the Ohio recount, dumping the burden on the rest of the party. And
don't even get me started about his campaign finances!!! But it's not
like this was the first time Kerry has bowed to Republican influences,
since most of his absences from the Senate were during votes for
Republican sponsored bills, and he rarely ever gave any opposition to
any bills that were opposed by his party. Now this isn't to say that I
support the Democratic party, but if he can be a traitor to his own
party then what kind of credibility would he have as president? None.
Does the Democratic party have a chance in 2008 with Howard Dean in
charge? Not unless Bush goes insane on public TV.

And don't even -think- that I would have voted for Bush just because I
don't like Kerry -- as I have pointed out before (and you have
vigorously denied), Bush is a criminal. He's the charismatic imbecile
that was chosen as a figurehead for the Rove administration, as run by
the Vulcans. (BTW, want to know who runs the media? Just look what

happened when 'Enterprise' did a political commentary slamming Bush and (quite literally) the Vulcans. The show was abruptly cancelled despite ratings that would otherwise ensure its survival for at least a couple more seasons.) As for the future, I'll lay 5:1 odds that we are back in Lebanon before the year is over.

You suggested that I'm a liberal because I voted for Nader -- I voted for him because the other choices sucked. Plain and simple.

So how does -that- match up with your "core beliefs", Dave?

3178. THE ULTRA ADVANCED PSYCHOTRONIC MONEY MAGNET

Newsgroup: rec.radio.cb
Date: 2005-02-22 15:15:40 UTC
From: ormusalchemy@aol.com
Message-ID: <1109085340.399671.272510@f14g2000cwb.googlegroups.com>
Source record: 196818

Life Technology Research International®
www.lifetechnology.org
email us at: ormusalchemy@aol.com for more information

The Psychotronic Money Magnet☐ Ultra Advanced Version 1.0
The Ultimate in Causal Engineering Technology
www.lifetechnology.org/ultramoneymagnet.htm

Through the aid of spiritual guidance given to us by the higher forces we have discovered a uniquely different and improved method of creating our well known Psychotronic Money Magnet☐ .The new method was delivered to us through an exceptionally gifted channel and we were astounded by the information that we were privileged to have received. According to the information the new method which we are adopting can raise the subtle energy characteristics and the manifesting capabilities of The Ultra Advanced Psychotronic Money Magnet☐ more than one hundred fold.

According to numerous testimonials this powerful device has certainly proved that it has the power to change one's financial situation for the better in the shortest possible time, and it is without doubt the most powerful and successful money generating talisman of all time. The sole function of The Ultra Advanced Psychotronic Money Magnet☐ is simply to create opportunities for it's owner to gain money and prosper financially. The longer one possesses this unique cosmic money magnet , the stronger it will become, and the more money it will draw to it's owner.

We have been using this device ourselves for some time now and experienced a massive increase in company income and profits just a few days after the first creation of The Ultra Advanced Psychotronic Money Magnet☐ .We have been exceptionally blessed by the higher forces and in particular by the wisdom of The Archangel Mikhail.

Originally Life Technology Research International® had listed these devices as Psychotronic Generators☐ designed to be programmed for various different types of archetypal energy (trend) ,but when we became aware of the massive demand for the money and wealth programmed Psychotronic Generator☐ it was decided to being marketing The Psychotronic Money Magnet☐ as a specifically programmed stand alone device. It is only now that we have been given specific information to create a magical tool that will quite simply transform ones life.

Could The Ultra Advanced Psychotronic Money Magnet☐ become the most powerful metaphysical tool ever created? It is our belief that the most

significant difference between this device and other forms of magickal talisman or life changing catalyst (eg NLP ,Huna , Hypnosis, Kaballah , Magick etc) is its passive mode of operation, ie no conscious input is required from the user, and unlike many other talismans the device will function optimally without any necessity for a certain belief system on the part of the user. The Ultra Advanced Psychotronic Money Magnet□ is so powerful in fact that it will override the belief system of the most hardened sceptic, and will reverse the mindset of the most pessimistic belief system.

Life Technology Research International® has taken this technology of 'Causal Engineering' and using methods based on the developmental work of Pavlita, Rifat , Fortune and many hours of Russian Psychotronics research we convert quartz crystals to Psychotronic Generators□. They amplify, produce and direct bioplasmic energy to modify quantum mechanical collapse, changing the course of events in the macroscopic world. This device uses a multiphase set of fields which apart from altering events, inculcate a theta rhythm of around 7 to 8 Hz, the natural theta frequency of the planet being 7.82. This frequency is the Schumann Resonance, the doorway to the world of causal engineering, ie consciously creating and manifesting ones desires.

The Ultra Advanced Psychotronic Money Magnet□ acts by establishing a new pattern of financial abundance in the subconscious and subtle energy fields of the user by harnessing the lifeforce and wealth enhancing powers of the Hebrew letters of the Kaballah. It is widely recognised in esoteric science and by academics such as James Hurtak and Stan Tenen among others that Hebrew letters through their specific mathematical structural geometry contain information that encodes life force energy, ie it provides an intelligent template for natural creative forces. It is these magical primal creative forces of The Kabbalah that we harness and focus in the preparation of The Ultra Advanced Psychotronic Money Magnet□

In the 1920's it was discovered that quartz crystals resonate at 32,768 khz. Seeing that the Great Pyramid of Khufu or Cheops Pyramid, is made mostly of limestone, which stone crystal matrix is mostly quartz, It is proposed that the entire pyramid operates as a conciously programmable cosmic biocomputer or radionics device, a massive Psychotronic Generator□ originally capable of harnessing and directing the focussed intent of the Egyptian priests who were its engineers .

The fact is that everything in the universe vibrates and oscillates. Therefore the connecting link between all forms of energy is vibration, sympathetic harmony and resonance. By studying and applying the principles of vibration we are enabled to see beyond material matter and into the primary creative forces of nature. Utilising the information from diverse fields such as Radionics, Psionics ,Psychotronics ,Quantum Physics ,Sacred Geometry, Sonics ,music and metaphysics has led to an understanding of how the human mind can interact creatively with the material universe.

Essentially, when the biotronic matrix of The Ultra Advanced Psychotronic Money Magnet☐ interacts with the conscious will of the operator it causes subtle changes to occur in the microcosmic universe which translates to manifestation in the macrocosmic universe (real world).

This device will naturally induce a theta state in the user as it alters reality to make money, wealth, abundance and affluence etc. more probable. The Ultra Advanced Psychotronic Money Magnet☐ is charged with the specific programming described above ,or may be programmed with your own specific intent. On request, Life Technology Research International® creates Psychotronic Generators☐ to generate any operational trend field which will facilitate the materialisation of any wish.

The Ultra Advanced Psychotronic Money Magnet☐ may be used in each of the following ways:
Place on a desk or on a bedside table for passive functionality, no input from the user is required.The device is an ideal size to be carried in a pocket or kept in a handbag. It is better that the device should be kept as close as possible to the user, ideally within 2 meters.

The device may also be kept under a pillow while sleeping where archetypal information will permeate and influence the subconscious mind ,or held in the hands or placed on the body while meditating. While relaxing or meditating it is an excellent idea to hold the crystal in either or both hands and focus positively on areas of ones life where positive financial change could occur, ie ones job ,business practices ,salary level etc. Create a mental movie and visualise achieving a wealthy ,prosperous state of existence. In any form of conscious subtle energy manipulation, results will occur through the artificial enhancement of natural processes. It is therefore important to recognise the new opportunities that you will attract to your life which will direct you towards a new paradigm of wealth and prosperity.

Ordering
The Ultra Advanced Psychotronic Money Magnet☐ supplied is the highest grade clear rock quartz . Please note that this is the much more powerful version of our other Psychotronic Money Magnet☐ for sale at our site and other auctions for $90. Each Ultra Advanced Psychotronic Money Magnet☐ comes with instructions for use. Each individually created Ultra Advanced Psychotronic Money Magnet☐ is priced at $180 US dollars. International shipping is priced at $10 US Dollars.
Shipping Insurance is optional.

Our 100% customer satisfaction rating at ebay indicates how pleased our customers have been since we began supplying our metaphysical products there. Please visit The Life Technology Ebay Store at http://stores.ebay.com/life-technology

This product may be of interest to students or practitioners of Alchemy ,Kabbalah, Reiki, Homeopathy, Healing, Buddhism, Shamanism, Pagansism, Rife Therapy, Chakra Therapy, Witchcraft, Antropology, Wicca, Magick, Huna, Hypnosis, Nlp, Rosicrucianism, Mysticism, Radionics, Psionics and Psychotronics etc.

>It wouldn't be the first time that pop-culture

>has influenced the way we think or the terms

>we use.

(That excuse might work if the focus of Forensics clubs had changed from speech to science. The definition of 'forensic science' is well established and -your- definition is wrong (despite any "core belief" to the contrary).

>Make sure you tell that to the criminalists all

>across the country so they can correct their

>mistake.

Hello David. As you debate with Frank, your insultive demeanor has been noted a few times and you finally seem to have made a slight effort at curbing and controlling your emotional outbursts directed at the poster as opposed to their topic. For that reason, and the fact that I am such an understanding and trusting kind of guy, I decided to give you another chance to exchange your views on this topic, but you must know, you are going back to being ignored the moment you become personally insultive. Of course, that has been your pattern toward each and every person that has shown your claims are wrong, but cbers are great folks and always willing to forgive.
Criminalists aren't the ones misusing the term, as with their work, it is directly involved with legalities, which is excatly what the term denotes. For some reason, you misinterpret the term and misuse it by applying it to situatiions not involving legalities.

>. And be sure to copy the producers of such

>Files", and even the prime time drams of

>SCI.And be sure to copy the producers of

>such

>educational shows as "FBI Files", "Forensic

>Files", and even the prime time drams of SCI.

The problem is the medium you hold as your source from where you get your information regarding such things. The show you speak of is every bit as Hollywood as Spiderman. Ask anyone who EVER worked in a lab that requires sterile technique, how many women run around in skirts, heels and uncovered hair, and that is only the tip of the iceberg. I understand the term "reality television" not only excites some people, but makes some believe what they are watching is real, but alas, it's still television with a great deal of error and fantasy.

Television can take a concept and run with it to the point it is almost unrecognizable, resulting in viewers permitting television to be their defining, albeit incorrect, source of such a concept, especially if said concept was totally foreign to them prior to the show and the episode was their first introduction to such.
Such behavor is called artistic license and is the norm in Hollywood productions, reality shows or not. Certain instances need be entertaining and interesting to hold the viewers attention, not dry, bland and uninteresting. Unfortunately, in such scenarios, facts often suffer and get clouded, resulting in viewers, such as yourself, holding such Hollywood directing as THE authoritive source.

>As most of you know, there has been some

>question as to the legality of Roger Beeps on

>CB radio.

There has never been any question as to the legality of roger beeps by anyone, cber or hammie, other than yourself.

> Some have claimed that they are legal,

Everyone that chimed in on the issue had tried telling you roger beeps were legal.

>while

>others have had some doubts.

Your need to lie about it at this point in your goof is quite telling. No one expressed doubt about this in the group, not one single person, except you. But you go on telling yourself that you had these imaginary supporters, as your ego apparently demands it.

>There are no FCC rules which specifically

>allow them, and very few radios come

>equipped with them.

>The banter back and forth has not resolved

>the issue as it was based purely on

>speculation and lacked any real facts.

Wrong, that was your position that was based on nothing but personal speculation. Again, you were the only one that expressed difficulty with this issue. Stop lying and saying others supported your incorrect assertations, as none did.

>So, I decided to got straight to the authority on
>the subject, and wrote to the FCC for a

>clarification.

>I have finally received a response to the

>question, and with my hat in my hand, I must

>now admit that I was wrong about Roger beep
>use.

Apology accepted.

Again, "Geo" just presented a passage that said THREE to five MPH. Both of you can not be correct.

(Your statement was wrong, Dave. That much is clear to "the vast majority" of people. The only question that remains is how many more excuses you are going to try.)

>Give it up Frank. You're grasping at straws

>and are looking increasingly more foolish for

>doing so.

Once again, you illustrate your view is in the extreme minority. It is yourself who has been shown he was wrong concerning the law governing the hobby in which you said you pride yourself on being informed. this took place even when stubbornly availing yourself of the collective intellect of the majority of the group, who told you the information you held was wrong. Once again, you are wrong concerning the law of which you speak and (sigh) claim you are so adept.

Blaming Twisty for your ticks, twitches, spasms and convulsions is all
good and core entertainment, yet, N8's behavior in which you defend has
been directed at other posters over the past several months, took place
on many weekends, and escalated over the holidays, but your hand in the
mess is acknowledged with your comical attempts like above.

I believe it's been stated in this group by a number of persons that "roger beep" is ILLEGAL.
It has also been pointed that internal mods are also illegal.
This is one of the reasons that radios sold as ham radios that are converted over, are illegal.
As it is necessary to modify the internal workings.
IOW, removing the screws from the case may void the certification.
This does not mean that minor repairs and tuning are illegal.

You state that there is no rule which forbids the use of "Roger beep".
How very wrong.
Within the very body of the material you are given with a new unit, it clearly states that practically any item which is NOT standard voice audio, is ILLEGAL.
With the exception of morse code.
This includes singing, whistling, and other noises designed to be a nuisance.
"Roger Beep" is only legal at the END of a transmission as you release the key.

I'm not a cop, nor do I care to know why. I accept it as SOP that this
is the way things are done. The "why's" are irrelevant.

>>What happens in other places is irrelevant. All I am concerned with is
>>the Commonwealth of Pa.

>
>
>Is PA so isolated that their law enforcement practices are

I don't know. I'm not all that interested in how other states do
things. But I do know how things are done where I live.

3368(c)(4) clearly defines those cases.

Find me any case of someone getting a ticket for less than 5 MPH over.

>>>Your statement was wrong, Dave. That much is clear to "the vast
>>>majority" of people. The only question that remains is how many more
>>>excuses you are going to try.
>>
>>Give it up Frank. You're grasping at straws and are looking

>>increasingly more foolish for doing so.
>
>
>Your plea is a classic indicator that you are running out of excuses.

My "excuse" is the same as it has always been. Statute 3368. You cannot argue the clearly worded fact that it states that under the conditions of electrical and electronic devices that they must give at least 5 MPH "leeway".

I never said "all the time", because every rule has an exception. And you are attempting to base your claim on that exception rather than the rule.

You're excuse then became that "well they can use a stopwatch" (giggle). But you have thus far failed to provide any examples of either locales in this state which routinely use a stopwatch, or any people who have gotten a ticket for under 5 MPH over the limit, or any other case which would show that my statement would not apply in the vast majority of cases.

You're list of excuses has now run down to now just blurting out that I am wrong, while heretofore failing to effectively prove it.

You can call me wrong until you're blue in the face, but it doesn't make it so.

Not at first. But after a few civilized posts you started implying
that I was some sort of left-wing fanatic, culminating in a blatant
accusation that I was a half-baked, fully-biased liberal. And by your
own admission about what you think about left-wingers and liberals,
that was most definately a smear. You started it, Dave -- don't go
putting the blame on me just because you have a warped perspective.

>>>psychological issues more than 2 years ago. I do not "employ" the
>>>tactics of Twisty, I call attention to them.
>>
>>
>>So you are a psychologist as well as an engineer?
>
>No, but the study of human behavior is one of my "hobbies".

That's why you think you know so much about liberals, huh?

>One can experiment with computers and radio without being an engineer.
>One can build structures without being a carpenter. One can add a hot
>tub to the back deck without being a plumber. In the same vein, one
>can recognize certain behavioral traits without being a licensed
>psychologist.

If you practice psychology then you are a psychologist. I never said
anything about being licensed.

>I sure hit a sore spot with Twisty. You are also responding somewhat
>predictably. I can almost guess what your responses will be. It's fun
>to watch actually.

Actually, your responses are predictable. You get attacked from
someone using a certain tactic then you adopt that tactic for your own
use in a counter-attack. You are attempting to use a tactic I employed
a couple weeks ago, but because you are so predictable the tactic
isn't working for you. Wanna know what you are going to do next?

>>>>>This is a public forum not e-mail Frank. Everyone is welcome to

>>
>>
>>That's obvious, for the reasons I already stated.
>
>No, because I'm just not that interested.

So -that's- why you respond to nearly every one of my posts -- because
you aren't interested! By golly, I -knew- there had to be a reason....

>>> I'm
>>>not the one who desires enlightenment. You have been chasing me since
>>>the election, and have grown bitter, crass, and highly emotional. Very
>>>atypical from how you used to behave.
>>
>>
>>.....um, I hate to break this to you, Dave, but I have -always- been
>>bitter, crass and highly emotional, as anyone here can attest.
>
>No, actually you weren't. You used straight up, no-nonsense, and
>direct. Now you are bitter, sarcastic, condescending, insulting, and
>seething with an emotional connection.

You have proven time and time again that you haven't read many of my
posts, whether they were of me defending Bush against Twisty, my
personal experiences in the military, or my sarcastic banter with
other know-it-all's like myself. I suppose your "core beliefs" just
wouldn't allow you to read those posts, huh?

>> The
>>only reason you see a difference is because my boot is up -your- ass
>>instead of someone else's.
>
>That makes no difference.

It makes a -big- difference, and the proof is the fact that you now
respond to almost every one of my posts.

>>> I seriously stung you (And it
>>>was not intentional. I had more respect for you at the time), and
>>>you've been chasing me like a rabid dog ever since. From
>>>troubleshooting radios, to speed traps, to who know what else, If I
>>>say "zig", you say "zag", and make every effort to try (however
>>>poorly) to prove me wrong. You've even aligned yourself with one of
>>>your worst former adversaries in the pursuit of this goal.
>>
>>
>>You claimed your beliefs were based on facts and logic. You lied.
>>That's what it all boils down to. You're a hypocrite, Dave -- pure and

Have you ever read Frazer?

>>>Right now I am enjoying your attention. Eventually, I'll tire of it,
>>>and I will just stop responding, in the same vein that I treat Twisty.
>>
>>
>>You claimed that you would ignore Twisty many years ago, yet you still
>>engage him on cue.
>
>And then once I've given him my few punches between the eyes, I stop
>responding.

Usually because you run dry of excuses.

>> But I do believe that you will eventually ignore me
>>when you finally run out of excuses, just as I predicted in an earlier
>>post.
>
>You're right, but the excuses will be yours. You've just about run out
>of spin in the Pa. speed law issue.

What spin? You made a statement. I proved that your statement was
wrong. Since then you have been coming up with every excuse in the
book to defend it, and it seems you are going to rest with "it was
implied". I can let it go there, since that's about the lamest excuse
in the book. Only one is lamer -- Ollie North: "I don't recall".

>Then you will invent another topic to try to start things up again.
>That will be my prediction.

The only topic I'm discussing is your ignorance.

>Now get to work. You did say you would not be around as much. Or was
>that a lie too?

Again, you just proved that you have poor reading comprehension.

Tolerances eh? Like maybe 5 mph over? Maybe you're finally waking up
to why this is done.

> This makes the stopwatch method very accurate,
>reliable, and fair.

No kidding. The longer the distance between the points, the less of an
effect the reaction error will make on the calculation. As a
performance boater, we often make timed runs on a calibrated 1/2 mile
run, and time the results with a stopwatch. I am fully aware of how it
is done. At 1/2 mile, the reaction time error is virtually
meaningless. But that's hardly practical for enforcing speed.

Frank, I do not have the time nor the interest in getting into the
meat of this with you. Seeing how you've latched on to this no-win
topic with the teeth of a pit-bull, I'd be an idiot to think you'd
grant me any due consideration. I really don't feel like getting
involved in the intellectual equivalent of banging my head against the
wall with you. You will believe what you want to believe, and I will
do likewise. I'll let history be the judge of who was right.

>counted).

Kerry, in spite of his other failings, has a decent amount of class,
and didn't want to be another "Sore loser" like Gore. Kerry also has
hopes of running again in 08 (Unless the Hillary bandwagon runs him
over), so his more gentlemanly reaction would serve him better in that
regard.

> Kerry & family then bailed to Governor Arnold's place for a
>nice weekend vacation (remember that Arnold was a strong and outspoken
>proponent of the Bush campaign).

Arnold's wife is also a Kennedy, and a big democratic supporter.

> Kerry was also visibly absent during
>the Ohio recount, dumping the burden on the rest of the party.

Because he wanted to distance himself from the bru-ha-ha. He's already
set his sights on '08.

>And don't even get me started about his campaign finances!!! But it's not
>like this was the first time Kerry has bowed to Republican influences,
>since most of his absences from the Senate were during votes for
>Republican sponsored bills, and he rarely ever gave any opposition to
>any bills that were opposed by his party.

That bears further investigation. But how do you explain his votes
which cut both defense and the military? That's not pro-republican.

> Now this isn't to say that I
>support the Democratic party, but if he can be a traitor to his own

>party then what kind of credibility would he have as president? None.

I agree, but for different reasons.

>Does the Democratic party have a chance in 2008 with Howard Dean in
>charge? Not unless Bush goes insane on public TV.

Interesting. This is pretty imaginative thinking. It's almost as cool as a "Manchurian Candidate" scenario. But what you have is a collection of coincidences that, by themselves, mean little. But you have assembled them into a story that fits the conditions. That's not fact Frank, it's a conclusion.

I agree that Dean will give the democratic party an even more visible kick toward the left, and that will drive away even more voters. Personally I love it!

>And don't even -think- that I would have voted for Bush just because I
>don't like Kerry -- as I have pointed out before (and you have
>vigorously denied), Bush is a criminal.

He received a DUI almost 30 years ago. That's hardly the type of behavior that makes one a true criminal.

> He's the charismatic imbecile
>that was chosen as a figurehead for the Rove administration, as run by
>the Vulcans.

Now you are starting to regurgitate left-wing pablum. Rove is nothing more than a shrewd campaign advisor. That shadow government conspiracy thing is really a giggle.

> (BTW, want to know who runs the media? Just look what
>happened when 'Enterprise' did a political commentary slamming Bush
>and (quite literally) the Vulcans. The show was abruptly cancelled
>despite ratings that would otherwise ensure its survival for at least
>a couple more seasons.)

You're kidding right? You're claiming that Star Trek Enterprise was canceled over a political statement? Do you have any proof of this, you know, facts? As far as I know the show was canceled due to lack-luster ratings. Nothing more, nothing less.

>As for the future, I'll lay 5:1 odds that we
>are back in Lebanon before the year is over.

That's a really obvious prediction, considering the recent activities there.

>You suggested that I'm a liberal because I voted for Nader -- I voted
>for him because the other choices sucked. Plain and simple.

So then, would you vote for Mao tse Tung, Josep Stalin, or Hitler, if the other choices sucked too?

But I should thank you. Nader and his votes helped Bush to get re-elected. Why do you think the democrats were so adamant on trying to block his name from the ballot?

>So how does -that- match up with your "core beliefs", Dave?

Perfectly fine, thank you.

That's funny coming from the guy who claimed in another thread just
today, that "Enterprise" was canceled because they "offended" the
Bush administration, and who also claims that Karl Rove is the leader
of the "Vulcan" underground, who is really running the country.

Actually, you need to talk to Frank about this. The term forensic has
a much more basic definition, which involves the art of debate.

From dictionary.com:

foï¿½renï¿½sic (P) Pronunciation Key (f-rnsk, -zk)
adj.

Relating to, used in, or appropriate for courts of law or for public
discussion or argumentation.

Of, relating to, or used in debate or argument; rhetorical.

Relating to the use of science or technology in the investigation and
establishment of facts or evidence in a court of law: a forensic
laboratory.

foï¿½renï¿½sics (P) Pronunciation Key (f-rnsks, -zks)
n. (used with a sing. verb)

The art or study of formal debate; argumentation.

The use of science and technology to investigate and establish facts
in criminal or civil courts of law.

Woah, back up a little. I also included the shows "FBI files" and
"Forensic File" which were produced for the Discovery Channel and
Court TV. They deal with the "real" CSI criminalists, and their
methods. It's not a "drama-driven" show like the CSI's

>Ask anyone who EVER worked in a lab that

No, not everyone. There was no definitive rule that specifically
allowed them. Therefore the claim that they were legal was based on
pure speculation only.

But it's water under the bridge now. The FCC has spoken.

There's no definitive rule that allows chrome knobs and black paint on
CB radios, either. The problem is your warped logic, Dave -- absence
of evidence does -not- constitute proof of the opposite. When are you
going to realize this fundamental flaw in your thought process?

When are you two going to give it a rest? You are both radio intelligent
but seem to enjoy the nonsense that is akin to the george & doug vs
steve/shark/randy crap that is on this board.

This is amazing. People have owners that that don't spen money, and bitch about it. Then the bitch about owners that do spend money. Well, which is it?

Most fans, especially those that hate George, would take him in a minutes as their team owner, because he is not cheap and wants to win.

He has SO MUCH cable and broadcast TV revenue that he's not spending
one red cent of his own money, with these high ticket player additions.

Smell the pasta, Enzo. You guys have a very unfair advantage. MLB needs
a hard cap that's similar to the one the NFL uses. (NBA too)

Probably over 200. But he built them into this commerical empire, and throws his money back into them. Many other owners don't

>> Most fans, especially those that hate George, would take him in a minutes

>Are you kidding?!?! He's from Cleveland, and made many millions here.

And from what I read, that business went belly up.

>> as their team owner, because he is not cheap and wants to win.

>He has SO MUCH cable and broadcast TV revenue that he's not spending
>one red cent of his own money, with these high ticket player additions.

Most owners don't spend their own money. He doesnt either. Besides. He built that with no help from the other teams. Why should he have to share it? The NFL was built essentially by the commish in the 1960's. Same with Bird, Majic, and Jordan, in the 1980's. Steinbrenner buil the Yankees himself. Wh should he have to share it?

>Smell the pasta, Enzo. You guys have a very unfair advantage. MLB needs
>a hard cap that's similar to the one the NFL uses. (NBA too)

I have to remind you, the current CBA, which was approved by every team except the Yankees, was geared only against the yankees, when it was implimented. The Threshold for luxury tax was set so only the Yankees would go over.

Would you call that an unfair advantage?

Your problem is not the Yankees. It is the small markets and Bud Selig. The lowest payroll teams get all the revenue sharing and luxury tax money, and are not required to spend none of it. SO why would the owner impliment a cap in this league, when that would essentially cap the millions of free money they get from George, and on top of that, be required to spend millions in payroll?

There will never be a cap. They love getting free millions, and they love the fact they don't have to spend any of it. The problem is the mid-market teams, like the O's, Rangers, Tribe, who would love to spend revenue sharing, but their payrolls are too high to qualify.

Like I said, the Yankees are not the problem.

But when you say he throws 'his money into them' you're talking about
media generated funds. That's not money out of his own pocket.

The only reason it is tolerated can be explained in two letters.

Guess which?

He started the YES network. He was not the first. Boston had NESN. Atlanta has TBS. But everyone only wants his money. This year, the Mets are following suit with their own network.

You want to punish him because he is resourceful and creative?

>The only reason it is tolerated can be explained in two letters.
>
>Guess which?

I am not going to argue that the balance is too great in one direction. You are right. There needs to be a better balance. But he is playing by the rules for which the other owners set up. He didn't agree to those rules. The Yankees were the only team to vote no on the current CBA.

Regarding the NFL and NBA, they are poor examples because neither you nor my football (Jets, Browns), or basketball (Knicks, Cavs) teams, had any championship in recent history. In fact, in the NBA since 1980, 6 teams have 24 championships. The Lakers, Bulls, Celts, Pistons, Spurs, and Rockets. That doesn't look like balance to me. How do you think the LA clippers feel about balance? When are my knicks going to win? What about the Jets? Before herm, they were a league doormat for 25 years.

BTW, I went you the ESPN website to see what the Tribe spent. It was 34 million, 3rd from the bottom. I would also like for you to know that Jim Dolan, the brother of the owner of the Tribe, is so dead set against the Jets getting a stadium on the west side, that he offered 600 million for the land that the Jets want. And he is the guy that essentially owns the Tribe, Knick, Rangers, MSG.

I don't know about you, but if he spends 34 million on your payroll, and has 600 million for land just to keep the jets out, Steinbrenner isn't the problem.

Time out, Vin. He doesn't move the rich man meter in real life, so
to say everyone only wants his money is a real stretch. The Browns
owner (Lerner)is worth real writing home about money.

The difference is in the TV revenue. You can't admit that?

Well, the small market want and get his money.

>The difference is in the TV revenue. You can't admit that?

TV revenue he created. Sure I admit it. That revenue wasn't their until he signed a 500 million cable deal, in 1987. That was 14 years *after* he purchased the Yankees. And of all that money in 1987, he didn't win a championship until 9 years later.

Now shut up, and good night. We will talk tomorrow !!!!!

Dude, I bought my table from Danny. His store is only like 25 miles from
my house. Small world man..You should play 9 ball by yourself on it, that
will sharpen your skills. Oh and make sure your stick is straight.

I watched three dudes install and level my table, it was worth the install
price. The one guy came back later and played on it.

dannyveghs is very well respected in Cleveland.

I will send you a picture of it. They didn't install it here. I don't know who did. That mahogany one on their site, is the same as the one I have in my basement. When I bought the house 2 years ago, the owner left it.

>>Iraqi WMD was highly probable, as far back as 1998. Would you like to
>>see the quotes?
>
>
>Yet you ignore the possibility that they -didn't- exist.

No I haven't. But all of the prior intelligence that said that they
did exist is either seriously in need of an overhaul, or something
happened to them in the last 12 years.

> Ironically,
>you base your belief on the -absence- of evidence. IOW, the weapons
>existed because there is no proof they didn't.

There was proof that they did exist at one time. No one disagrees with
this. The question is what happened to them? Did Saddam, in good faith
REALLY destroy ALL of them? Or true to his nature, did he hide them?
We don't know for a fact either one. But based on his past behavior,
which scenario is more likely?

> And Kerry is a criminal
>because there is no proof he isn't.

No, he should be a criminal because he admitted to committing war
crimes. The fact that no one chose to prosecute him, worked in his
favor.

>>>>> Your 'fact' consisted of a website with a

>
>
>Any president would have taken a strong stand after the 9/11 attack.
>But the fact remains: Saddam never attacked us!!!

That is true. But he is a piece of the whole terrorism puzzle. He also
sits on a sizable quantity of oil. If we succeed in planting a seed of
democracy in Iraq, the ripples will spread to other nations there. It
already has to some extent. If, for whatever reason, the experiment
fails, we still have a hand in that country and could use it against
other countries like the Wahabbists in Saudi Arabia, if they succeed
in toppling the royal family and cut us off from their oil.

You relied on troubleshooting that others had done and took a chance
that your problem was the same. It paid off, lucky for your wife. I
don't know squat about transmissions so whenever something goes wrong
I take mine to Joe's Transmissions (recently relocated to N. Market)
because I know they will do the job right.

Wrong. The 'net effect' is that gain is higher than average when the
signal level is lower than average, which is not necessarily due to
compression because compression does not require (or imply) variation
of the gain below the knee. You get unintentional downward expansion
from a compressor when you push the average audio level -above- the
knee. I remember a pretty good link on the subject -- I'll post it if
I find it again.

>
>Hello McFly.

Oh gee, that was clever.

> The mike limiters are BEFORE the mic gain pot.

VR6 controls IC3, right? And the only limiter that affects the audio
prior to IC3 is the first (hard) limiter, right? So if the audio
signal is low (because you inadvertently reduced the mic gain by a
factor of 10) then it will take ten times the audio signal level to
turn on the first limiter, right? And the second limiter (AMC) comes
after IC3, right? I guess you -do- need a picture..... oh, but I
forgot, you -do- have a picture -- it's called a 'schematic'!

> If I was
>increasing the level to compensate for the setting of the pot, the
>mike agc circuit would be compressing the audio. But considering that
>the real compression does not start until you are in the 200 mV area,
>that doesn't really apply at all.

First, there is no mic AGC circuit. There is the first limiter (hard)
and the second limiter (AMC).

Second, the first limiter kicks in based on the forward voltage drop
of D20, which (if silicon) will be about 0.6-0.7 volts. And since it
is affected only by a negative peak, then the first limiter doesn't
even start working until the audio reaches a level of 1.2-1.4 Vp-p!
That should give you a clue that its purpose is to limit extremely
high audio levels, like when the mike is dropped, or some dummy shoves
the mic in his mouth, burps up some half-digested Kokanee and yells
"A-U-D-I-O".

Third, the second limiter (AMC) begins working at a level set by VR7,
which is -supposed- to be 200mV... AT A SPECIFIC FREQUENCY. But you
screwed up your audio equalization when you turned down the mic gain
and forced yourself to compensate by moving the mic closer to your

mouth. Your audio now swings much higher at low frequencies so your VR7 adjustment is now useless. You could readjust VR7 by setting the sig-gen for a lower frequency that is more characteristic of the audio, which would probably make a girly voice sound a little better but make a normal voice sound extremely boomy and without presence (although it will be clear because the AMC isn't being overdriven). But since you didn't readjust VR7 for the changed frequency response those low frequencies push the AMC into service much more often than desired. And while the AMC is busy dimming the audio level on each low frequency peak, many peaks of higher frequency audio are literally compressed in the process. When the low frequency peak drops then the higher frequencies are passed at normal amplification.

In a way, you are amplitude modulating your high frequency audio with your low frequency audio. That's just plain messy, Dave. That's why your audio sounds like crap.

I have now explained this twice. Is your electronic theory so bad that you need it explained to you a third time?

>>> The AMC action occurs AFTER
>>>VR6.
>>>
>>>

>>frequencies disproportionately.
>
>And you are assuming that we are talking about the stock dynamic hand
>mike. Most people run amplified desk mikes, which is a whole different
>kettle of fish.

That's why most amplified mics sound like shit unless they are turned down to match the radio, or hadn't you noticed? And it's also one reason why the better quality desk mics include some sort of frequency equalization -- preferably a parametric block, but even a tone control would make a significant improvement in most mics.

>> And since those low frequencies have a
>>much higher level than your average speech audio level, it will be
>>those low freqs that drive the AMC into limiting at a lower -average-
>>audio level than anticipated. Do I need to draw a picture?

>power amp, where it is then applied to the modulator transformer T1.
>
>You chastise me for a perceived lack of understanding of the basics,
>yet you demonstrate a clear lack of understanding of the more
>advanced.

If you are running AM then the audio will be distorted when modulating the final because you are very likely going to push it past 100% on the low frequency peaks (remember that VR7 is misaligned due to poor audio equalization). If SSB then the modulated IF most certainly -does- pass through the crystal filter since that's how you extract SSB from the DSB output of the DBM (or did you sleep through -that- class, too?).

>>> The action
>>>can be described as compression as the low end gain brings up low
>>>level audio what the "clamp" holds the maximum level to a hard
>>>maximum.
>>
>>
>>That might work except that neither of the limiters control the audio

>gain.

You may actually have a point there if the audio is attenuated for at
least one full cycle.

>> That's called 'limiting', and it occurs
>>one wave at a time. 'Clipping' is a harder form of hard limiting.
>
>Clipping is actually a distortion to the wave.

Yes it is. What's your point?

>>'Compression' is a type of AGC; i.e, the output signal controls the
>>gain of the amp. A CVA (Constant Volume Amplifer) is a type of
>>compression that is commonly used in the broadcast industry for
>>speech. Compression works by controlling the average level of the
>>audio, not by limiting the peaks.
>
>In either case, the overall gain of the stage is controlled. Whether
>you actually vary the gain of the amplifier, or you shunt some of the
>input level in response to a sensor on the output, the end result is
>the same.

Wrong. As you already mentioned, clipping distorts the wave. The
output level is detected and used to clip, or -distort- the wave. If
the output level was detected and used to control the -gain- then it
would be compression. But that's not what's happening here.

>Again, you like to argue semantics.

Again, you whine about semantics whenever your understanding is proven
to be less than accurate.

>>> In fact any CB radio's AMC
>>>circuit could be described as audio compression of sorts for the same

>>talking louder into the mic.
>
>The gain of the internal pre-amps is set to maximum.

There is only one preamp, which is IC3. It's gain is set by VR6.

> When you talk, if
>your voice exceeds the preset level (in this case 100% modulation),
>the limiters reduce the input signal to the respective audio stage.
>Overall gain IS adjusted.

The limiters clip the portion of the audio that would otherwise drive
the modulation past 100% (at least that's the general theory of
operation). The audio is distorted and the LPF was included to filter
the harmonics resulting from the distortion. The gain is unaffected.

>>Or just don't "slam the clamp". Even better, run a CVA between your
>>mic and the radio.
>
>An external speech compressor? Sure, but the one internal works just
>fine. There's more gain than anyone really needs. "Slamming the clamp,
>is one way to keep average modulation levels high without creating
>overmodulation. That's the whole point of speech compression.

Are you -really- an extra or did you just memorize the test questions?
Walk away from the computer and television for a while and read your
handy-dandy ARRL manual on the subject. You have a copy, don't you?
I'm sure you do, it's probably stashed in one of those boxes in the
attic, right under that fondu pot your auntie gave you for a wedding
present.

>>>>I am referring to what the meter reads when you switch it to AC and

>
>Now, who has a reading problem? Or should it be a memory problem?

No, just a lack of understanding that circumstances change. I didn't start the job until after the other bartender left, which was two weeks after he gave his notice (and notified me that the job was open). That gave me enough time to clear the estate (intestate, BTW, so it's still not finished). And the hours were less than I expected because they hired two bartenders to replace the overworked one that quit. Happy?

You don't know a lot of things about this subject, Dave. Yet you
profess that the -one- thing you -do- know is fact.

> I'm not all that interested in how other states do
>things. But I do know how things are done where I live.

You know this because some cop told you so? And you expect me to
accept that as fact? Well, I know for a fact that some cops lie, and
that some of them don't know the law as well as they should. Those are
facts you can verify for yourself. So what proof do you have that this
cop didn't lie, or that he knew the law well enough to make such an
absolute statement?

>>vast majority of the cases", or any of the other conditions you added
>>after your statement was proven wrong.
>
>3368(c)(4) clearly defines those cases.

It defines cases where electronic devices are used. It does -not-
declare that mechanical devices are rarely used.

>Find me any case of someone getting a ticket for less than 5 MPH over.

In PA or anywhere? And if only in PA, what level of proof is
acceptable? Just a claim by somebody saying they were popped for less
than 5 over? Or are you going to require the official government
documents..... oh, that's right, official government documents don't
carry any weight with you. So how about a declaration from Rush that
you -can- get a ticket for 5 over in PA (assuming I can contact him at
the rehab center)?

>>>>Your statement was wrong, Dave. That much is clear to "the vast
>>>>majority" of people. The only question that remains is how many more
>>>>excuses you are going to try.
>>>
>>>Give it up Frank. You're grasping at straws and are looking
>>>increasingly more foolish for doing so.
>>
>>
>>Your plea is a classic indicator that you are running out of excuses.

>My "excuse" is the same as it has always been. Statute 3368. You
>cannot argue the clearly worded fact that it states that under the
>conditions of electrical and electronic devices that they must give at
>least 5 MPH "leeway".

You cannot ignore your blatant omission that the required leeway only
applies to electronic devices.

>I never said "all the time", because every rule has an exception.

Well that's lame -- you can fabricate a 'rule' that says Republicans
are honest, but that would hold as much water as a sieve. And since
the 'rule' you cited applies to electronic devices while a different
rule applies to mechanical devices, the use of a mechanical device is
-not- an exception to the rule restricting electronic devices.

> And
>you are attempting to base your claim on that exception rather than
>the rule.
>
>You're excuse then became that "well they can use a stopwatch"
>(giggle). But you have thus far failed to provide any examples of
>either locales in this state which routinely use a stopwatch,

Where did I say "routinely"?

> or any
>people who have gotten a ticket for under 5 MPH over the limit, or any
>other case which would show that my statement would not apply in the
>vast majority of cases.

You made a statement. I proved your statement was wrong. It's now up
to -you- to prove that your statement is right. So far all you have
done is added the condition to your statement that it's true in the
"vast majority of cases" and excused your error by claiming "it was
implied". That's a cop out, Dave. Even by -your- standards.

>You're list of excuses has now run down to now just blurting out that
>I am wrong, while heretofore failing to effectively prove it.

I -did- prove it. Then you amended your statement. Validate your
amendment.

>You can call me wrong until you're blue in the face, but it doesn't
>make it so.

Grade-school rhetoric.

>to why this is done.

No, tolerances like the statistical error that's calculated from the
distance travelled, the calibration error tolerance of the device (a
constant), and the anticipation error as defined by the DOT (also a
constant). The result is a variable because of the distance travelled
(not a fixed 5mph) and the error is included in the calculation. So if
the cop clocks you at 56 then the error is already included in the
calculation and the bell curve is shifted in favor of the suspteced
speeder. Therefore, the calculation is the -lowest- speed within the
tolerance of the method. IOW, the speeder was doing -at least- 56 mph
with a statistical probability that can be mathematically calculated,
and that probability is more than likely going to be high enough to
convince a judge, which is all that matters.

>over), so his more gentlemanly reaction would serve him better in that
>regard.

I doubt that's the case. I caught a Senate hearing a few weeks ago and
he was ranting and raving like a lunatic about how the election was
stolen by the Bush campaign. Not very classy, especially from a person
who "didn't want to be another 'Sore loser'". My guess is that he was
reprimanded by the party for his premature ejaculation. But he's not
doing the party any good by raving like a lunatic -after- the tempers
of everyone else had cooled off.

>> Kerry & family then bailed to Governor Arnold's place for a

>>since most of his absences from the Senate were during votes for
>>Republican sponsored bills, and he rarely ever gave any opposition to
>>any bills that were opposed by his party.
>
>That bears further investigation. But how do you explain his votes
>which cut both defense and the military? That's not pro-republican.

There are a lot of bills that come 'padded' with pork-barrel spending
so a lot of good bills get shot down. And because of partisan politics
there are a lot of bad bills that get passed. That's what happens, and

if you look at the voting record of just about any other politician
you will find the same apparent contradictions. But some things -are-
consistent, and one of those is Kerry's absence during votes on key
republican issues.

>> Now this isn't to say that I

The activities aren't any more prevalent than years past. The only
difference is that they are now getting coverage in the left-wing
liberally biased media.

>>You suggested that I'm a liberal because I voted for Nader -- I voted
>>for him because the other choices sucked. Plain and simple.
>
>So then, would you vote for Mao tse Tung, Josep Stalin, or Hitler, if
>the other choices sucked too?

Probably not since they're dead, Dave.

>But I should thank you. Nader and his votes helped Bush to get
>re-elected. Why do you think the democrats were so adamant on trying
>to block his name from the ballot?

A decision that will backfire in their faces, as will happen to the
Republican party when they do the same thing if the polls don't lean
in their favor in '08.

>>So how does -that- match up with your "core beliefs", Dave?
>
>Perfectly fine, thank you.

Perfectly hypocritical.

>any claims about your education.

Actually, mods are not my area of expertise. I did mods for people
willing to pay for them. Personally I like to keep a radio basically
stock. My expertise, though, is in the area of repair. I would get the
radios that the other techs gave up on, or the ones that people
hopelessly butchered in a vain attempt at making a few more watts.

>
>It takes two to tango, Dave.

Remember that Frank.

>If you didn't have something to prove (or
>defend), then why bother to reply to my posts?

I can ask you the exact same thing Frank. That's the really hilarious
part of all this. You can't see your role as the flip side of the same
coin, and equally culpable.

>If your "facts" were
>indeed facts then they could stand on their own merit. But they aren't
>facts at all, hence your need to watch over them like a house of cards

The logical process is beyond reproach. You cannot argue with a
logical conclusion based on a solid set of premises. But what I
question, and use other methods to validate, are the likelihood that
those premises are faulty.

>
>

Frank, you have made your share of fallacies as well. The truth by
repetition, bifurcation, denial of the antecedent, are what comes to
mind. But I'm not really keeping score.

That this constitutes "misbehaving" is a matter for debate

>
>Because you are more intelligent than most, which means you are held
>to a higher standard.

Really? Again, who are you (alpha male) to be placing yourself in a
position to make that judgement?

> Was this not explained to you when you were a
>child?

No. The only people held to higher standards are those who are in the public eye, are paid to perform a service which requires a higher standard, or those who are recognized as leaders in one vocation or another. I fall into none of those categories.

>
>
>>>>The facts are that you are chasing me. I'm not chasing you.

I never run short of challenges, Dave. If one doesn't present itself
then I'll go looking for a challenge. But at least I don't fool myself
into believing that such challenges are nothing but 'recreation'.

> But projection is one of the most
>easy to spot psych issues.

And you are the expert on that subject, Dave.

Only if you define it as such. The FCC doesn't, which should have been
painfully clear when it was proven that they authorized a CB radio
with the feature.

Ouch! Hahaha...nah! I was checking out the weather chart to see if it was safe outside when I come across the temps up there. Figured I'd send a pic of the current conditions up that way. I don't watch baseball and haven't been a fan since the seventies, but NY Yankees are all over down here, so are the Toronto Blue Jays. In fact, one of the Yankees came into a business a few doors away and I had no clue who he was. Even after someone told me who he was, his name was more famous to me for dating a few pop icons than for playing baseball. I'll ask the gal who told me who he was, what his name is and get back with you.

Outstanding! You don't say what kind of shape it's in, but it should be covered with Simonis 860 Cloth, the rails should be firm and tight with no damage visible by eye or touch (running your finger lightly along the rails).
And sucking at pool can most definitely be corrected. Get yourself a good set of NEW balls and more importantly, get yourself a good stick. The stick will be the most important feature your game. Use a cheap stick (pool hall cues, etc.) as a beginner and you will pick up bad habits that will be difficult to break. Sticks vary in length and weight, but are all within a few ounces of each other. A good beginner's stick is a lower end Sneaky Pete. Figure about 100 bucks for a decent entry-level stick...anything much less than that and you can use a broomstick. If you are interested in leagues in your area, I can point you in the right direction.
Good luck with it. Have fun,

Quotes from Hunter S. Thompson...

"Absolute truth is a very rare and dangerous commodity in the context of professional journalism."

"The music business is a cruel and shallow money trench, a long plastic hallway where thieves and pimps run free, and good men die like dogs. There's also a negative side."

"I've always considered writing the most hateful kind of work. I suspect it's a bit like fucking, which is only fun for amateurs. Old whores don't do much giggling."

"I have a theory that the truth is never told during the nine-to-five hours."

"Going to trial with a lawyer who considers your whole lifestyle a crime-in-progress is not a happy prospect."

"The person who doesn't scatter the morning dew will not comb grey hairs."

"He that is taught only by himself has a fool for a master."

"Anytime there's a big sporting event, go to either the winning or losing town; there'll be riots in both of them. Riots are fun."

"Have an objective to give your bender a theme. For instance, stalking and killing a wild pig with a bowie knife."

"Some may never live, but the crazy never die."

Actually, I introduced the term to the group back in 1972
<g>,,...(ducks) ....er,,I mean 2002 to David,,or was it Leland? But you
most certainly got him to use it correctly.
I hate to get off topic here, but I really want to know what you think
is going to take place with Iran..are we going in? Meanwhile, N Korea is
posturing and John McCain (Thank God SOMEONE on the Senate Arms
Committee is paying attention) is saying it is absolutely imperative the
US retake Afghanistan. Yesterday wouldn't be too soon, as it has slipped
back in the hands of evil warlords and regime leaders who make Hussein
look like Mr. Rogers. Whatcha think? David? Chime on in here with a
prediction about the US invading Iran/Afghanistan/Pakistan/Perth, or
whoever the hell else is designated "evil" by the cowboy in the
WH.....my prediction is this,,Bush will eventually abandon Iraq and
declare it a success, regardless what happens there. If we invade Iran,
the loss of American life will be catastrophic by comparison to Iraq.

3278. WinScanner or WinTransceiver from Malzev

Newsgroup: rec.radio.cb

Hi,

i've been trying to get WinScanner or WinTransceiver from Malzev for the President Jackson: Winjack.exe. I found all I need at a TriPod hosted site.

http://members.tripod.com/~Malzev/cb-radio/jackson.htm
http://members.tripod.com/~Malzev/cb-funk/ic-240.htm

http://members.tripod.com/~Malzev/radiodoc/software/ic-240.exe
http://members.tripod.com/~Malzev/radiodoc/software/winjack.exe

But Tripod blocks the downloads. Anyone knows how to get a hold of the software where its link is in the ?

tnx...Marco

>that it's not me, he'll be in even more trouble.

>David T. Hall Jr.

>N3CVJ

>"Sandbagger"

You're right, but here is the flip side of which you did not consider.
Oxendine, while patroling the interstates in and around Gastonia (I-85,
US 321, etc.) has placed the FCC in a very precarious legal situation.
What Oxendine does, is make tapes of truck drivers he claims are
transmitting illegally on ten meter. He writes down their license plate
numbers and names of the company, if visible. He sends the info to
Hollingsworth and with nothing more than the word of the Ox-man,
Hollingsworth sends the truck companies a warning notice.
Flip side.

Now, if one were to tape your call being poached on the freeband, and
sent it to the FCC alleging you were breaking the law, the FCC has
obligated itself, by virtue of its actions with Oxendine, to treat the
dispositional actions of the complaint in THE EXACT SAME NATURE. And of
course, it doesn't matter if you're guilty or not, the notice is going
public..such is one of the benefits of having a clusterf*** like the FCC
in charge of such trivial bullshit.

Of course, failure by the FCC to follow their now-established protcol
could result in one bitch of a suit, and it is for this reason I am
beginning to question whether this chief enforcement officer for the FCC
has any legal background at all. If he went to law school, in my
personal opinion, the man should sue for breach of an educational

contract. Perhaps the FCC is in such piss poor shape because they keep hiring civil servants with no education related to the position for which they are hired.
I keep waiting for that super rich hammie to get busted by the FCC for some lame bullshit.

Now you know how Oxendine spends his free time. One can see how he at least believes his actions are pro-active. Tell me that boy don't eat, sleep, breathes radio!

thanx comment steveo
pardon
figured u a friend
no friend to neo nazi, kkk, or just a simple idiot

the idea of having canada help to put weapons in space, is still not a good
idea.
canuck new finance day
everything is now update

8 years of surplus is okay for canada

now lets go politics

nope lets not go there

you figure it out

fool

I don't know what other states do. But I do know the law in my state.

Perhaps if someone on this group has insight on the speed tolerance
policies in their respective states, they would be kind enough to
provide their unique perspective.

Not "this cop", but "those cops"(plural). What you say is very true.
Cops can lie and some cops can be a little lackluster when it comes to
the laws they are supposed to be enforcing. But when several cops,

from different departments, tell you the same thing, you tend to
believe it a little more. For me, that constitutes a fact. It was
verified from several credible sources.

>declare that mechanical devices are rarely used.

Then I guess the state police should throw out all of their RADAR and
LIDAR guns and invest in stopwatches. Heck, that's got to be a lot
cheaper. I wonder what trips my RADAR detector every time I run by a
speed trap? Those wascally state police are just using radar to fool
us. They're really sitting there with a stop watch.

And I guess those VASCAR+ units sitting prominently on the consoles of
the local patrol cars are there for decoration only?

You're grasping again Frank. Maybe if you lived here, you'd realize
just how desperate you are sounding.

>>Find me any case of someone getting a ticket for less than 5 MPH over.
>

>
>In PA or anywhere?

The subject is the Commonwealth of Pa. That's all I care about.

> And if only in PA, what level of proof is
>acceptable? Just a claim by somebody saying they were popped for less
>than 5 over? Or are you going to require the official government
>documents.

It's probably too much to ask for a scan of the actual ticket..... A
claim on a website would probably be ok, but then again, you never
know what might be motivating the claimant.

>.... oh, that's right, official government documents don't
>carry any weight with you. So how about a declaration from Rush that
>you -can- get a ticket for 5 over in PA (assuming I can contact him at
>the rehab center)?

What relevance does Rush have to this discussion?

>>>>>Your statement was wrong, Dave. That much is clear to "the vast

>
>
>Well that's lame -- you can fabricate a 'rule' that says Republicans
>are honest, but that would hold as much water as a sieve. And since
>the 'rule' you cited applies to electronic devices while a different
>rule applies to mechanical devices, the use of a mechanical device is
>-not- an exception to the rule restricting electronic devices.

The specifications for electronic and mechanical devices are
conditions for what is an acceptable speed timing device in Pa. They

are both conditions for the same rule. Since electronic devices are used in the majority of cases, they have to abide by 3368(c)(4) when using them. This becomes the de-facto "rule". The few under budgeted towns that may still be using stopwatches would be the "exception".

>> And
>>you are attempting to base your claim on that exception rather than
>>the rule.
>>
>>You're excuse then became that "well they can use a stopwatch"
>>(giggle). But you have thus far failed to provide any examples of
>>either locales in this state which routinely use a stopwatch,
>
>
>Where did I say "routinely"?

Well, in order to prove my statement wrong, you have to prove that a significant number of municipalities use mechanical speed measuring devices, which would invalidate my claim pursuant to 3368(c)(4). Otherwise, my statement stands.

>> or any
>>people who have gotten a ticket for under 5 MPH over the limit, or any
>>other case which would show that my statement would not apply in the
>>vast majority of cases.
>
>
>You made a statement. I proved your statement was wrong.

You're doing the "truth by repetition" fallacy again. No matter how many times you claim to have proven me wrong, it doesn't make it true. You have proven nothing. You cannot provide a single case of either a town in this state which uses a stopwatch to routinely time speed, or a person who has gotten a ticket for under 5 MPH over. Just because you disagree with my statement, is not "proof".

> It's now up
>to -you- to prove that your statement is right.

The proof is in 3368(c)(4). Now it's your turn. Prove to me that this isn't the case in the majority of cases.

>>You're list of excuses has now run down to now just blurting out that
>>I am wrong, while heretofore failing to effectively prove it.
>
>
>I -did- prove it. Then you amended your statement. Validate your
>amendment.

With what proof? The statute clearly defines the conditions where cops MUST give leeway. But there's also nothing to say that they can't apply it across the board in all cases, just for the sake of consistency. From what my cop friends have told me, it's simpler to do

that than have the hassle of arguing the points in court. There are plenty of speeders exceeding the 5 MPH leeway, that they don't have to worry about those under that mark. That's the simple reality of the situation.

>>You can call me wrong until you're blue in the face, but it doesn't
>>make it so.
>
>
>Grade-school rhetoric.

No, it's logical truth. You have failed to provide anything more authoritative than your own contradiction. You remind me of that old Monty Python skit, where the guy pays for an argument, but only gets simple contradiction.

Anticipation error is NOT a constant. It depends on human perception.
The time your brain recognizes the need for action, until your finger
actually hits the switch, can vary from person to person, and within
the same person depending on environmental distractions.

> The result is a variable because of the distance travelled
>(not a fixed 5mph) and the error is included in the calculation. So if

If it turns out that he's really doing 60 MPH then the tolerance is
still there, it's just built into the calculation. In any case, it's
still not his true speed.

>>> This makes the stopwatch method very accurate,

>Really? PA doesn't have highways?

So you are telling me that you can spot two points spaced 1/2 mile apart from the same local vantage point without parallax errors? It works if you are timing from the moving vehicle itself. But spacing of a 1/2 mile is not practical for a stationary timer. That's' why "speed zones" are a much shorter fraction of a mile.

Then why argue with what I stated? It's SOP in this state to give 5MPH
leeway when timing speeders.

I made a fairly general statement. You want to pick nits about the
specificity of what it means.

Do you want a politically correct reformulation of that statement?

If I say that the state of Pa. routinely gives at least 5 MPH grace
for speeders, due mostly to requirements set forth in statute
3368(c)(4), and at the discretion of the LEO in other cases, would
that make you happy?

The point being, you will be hard pressed to find people who have
received tickets for less than 5 MPH over, and an even less percentage
of those who actually had them stick.

>>Sure it is. When something does not cross the degree of probability

I never said that I don't accept the "other" meanings. Only that you
were wrong in claiming that my usage was not consistent with at least
one of the given meanings. If you have a problem with that, then you
need to take it up with the people responsible for "inventing"
definitions.

>> Sorry if you are a "purist" and can't

Nobody used the terms outside of their definitions. In every case
where you have criticized my use of vocabulary, I have provided
definitions of the terms which are consistent with my usage.

Now, who has the problem here? Twisty tried the same thing before, and
when I set him straight, his excuse was that my reference was
inaccurate, or inferior. But again he, like you, need to take that up
with the people who publish dictionaries.

>>>> It's funny how you regard the things you don't

>stolen by the Bush campaign.

Not something you would expect from a "republican shill" eh? How do
you reconcile those seeming contradictions in behavior?

> Not very classy, especially from a person
>who "didn't want to be another 'Sore loser'".

I never said he wasn't a sore loser, I said that he didn't want to
appear like one. He will need to woo votes for a run in '08. You saw
what happened to Gore after 2000. Heck Howard Dean was the
front-runner in '04 until his famous "Yaaaaaaarrrrr" outburst.
Political strategists are cognizant to the P.R. aspects of their
candidates image. The don't front the best candidates. They front the
candidate they feel stands the best chance of WINNING.

>My guess

Guess? That's a feeling, not a logical conclusion based on fact.

> is that he was
>reprimanded by the party for his premature ejaculation. But he's not
>doing the party any good by raving like a lunatic -after- the tempers
>of everyone else had cooled off.

Well as long as we're speculating and not relying on any facts, Kerry
want's to be CNC. He will be working behind the scenes to highlight
each and every case where Bush may stumble just to remind people that
"I could have been your leader". His whole campaign will be based on
the mistakes of Bush, and how American now has a second chance to
"correct" those mistakes. Of course it's a huge gamble. There are some
significant variables. First off, like in true democrat fashion, he
has to hope that our country does poorly, in both the economy and in
the war on terror. If most of Bush's policies turn out a positive
outcome, he will be seen as the "wrong" choice. The other variable is
Hillary. Right now, according to most polls, she's the dem's best bet
for '08. How he will deal with that will be interesting. It's

interesting to note that Hillary is slowly realigning her "core
beliefs" to be much less left leaning, and more moderate. Yet, she's
still indicating that she's not really interested in running. Uh
huh.....

>>> Kerry & family then bailed to Governor Arnold's place for a

>
>
>She supported her husband in his campaign against a democrat.

The Kennedy's and Kerry's are friends.

Arnold is not that conservative of a republican. On fiscal matters
he's somewhat conservative, but on social issues, he's pretty liberal.

Besides, people are not allowed to be friends with people of different
party affiliations? The fact that Kerry was at Ah-nolds home is not
necessarily political in nature.

That's why I support the line item veto.

> That's what happens, and
>if you look at the voting record of just about any other politician
>you will find the same apparent contradictions. But some things -are-
>consistent, and one of those is Kerry's absence during votes on key
>republican issues.

That could be explained by the reality that the senate is controlled
by republicans. Unless there is dissention within the republican
ranks, a republican sponsored bill stands a good chance of passing
whether Kerry votes or not. Since voting would be a waste of his time,
he can not bother to travel to D.C. to vote and then be free to
concentrate on doing "other things" (golf?). There's also the
possibility that a "no vote" might look better than a negative vote on
what might turn out to be a popular conservative bill.

Well, that remains to be seen. I don't know who are the best
candidates that the repub's can run in '08. McCain is a good "olive
branch" type moderate, but he's getting a bit old and in questionable
health. Rudy Guiliani is charismatic and has his handling of 9/11 in
his favor. But there's a worry that he's not "conservative enough".
There's been talk of Condi Rice as a counter to Hillary.

>Perfectly hypocritical.

Maybe you should re-examine your own beliefs and methods before
labeling anyone else a hypocrite

>
>
>Even scarier.

What is that scary? You never had a tranny problem?

>> Seems that when you would drive it for an
>>extended period of time, the transmission would start shifting hard,
>>and the MIL light would light up and set an P1870 trouble code in the
>>ECU. Looking up the code, it stated that is was a transmission
>>slippage code, and the hard shifts were a result of the system
>>pressure increasing to compensate for the slippage. The only remedy
>>that the dealer would offer was a $2000 replacement transmission. I
>>turned to the web and started looking for other people who had had
>>similar problems (experience). I found out a lot. It seems that the
>>problem was caused by the PWM valve (or more accurately the bore for
>>it) for the lockup torque converter clutch. This was in the
>>transmission valve body and was made of aluminum and after about
>>45-50K miles, it would have worn sufficiently enough to cause the
>>problem that I had. I found that a company (Sonnax) sells a bore
>>reamer and a replacement steel sleave that can be installed in the
>>valve body, which would restore proper operation. So for about $90, I
>>bought the parts and performed the work (Dropping a valve body is a
>>bit messy though). The problem was solved.
>>
>>Now, would I have been able to get to this point by logical

>>progression alone? Maybe. But by tapping the experience of other
>>people, I was able to solve the problem without a lot of mistakes and
>>expense.
>>
>>This is just one of many such examples.
>
>
>You relied on troubleshooting that others had done and took a chance
>that your problem was the same.

Exactly! I used experience in a particular problem (In this case the
experience of many other people) to save me the time of having to find
it out for myself. I saved time and I saved money.

>It paid off, lucky for your wife. I
>don't know squat about transmissions so whenever something goes wrong
>I take mine to Joe's Transmissions (recently relocated to N. Market)
>because I know they will do the job right.

I do know something about transmissions, but I lack many of the
special tools necessary to do the major work myself. But since this
was a simple valve body problem, it was well within my expertise to do
myself. I saved over $1900. I'd say it was worth it.

This is a well known problem with late model 90's GM 4L60
transmissions. If anyone is having a similar problem, let me know and
I'll point you to some excellent websites when can help.

>>>That excuse might work if the focus of Forensics clubs had changed
>>>from speech to science. The definition of 'forensic science' is well
>>>established and -your- definition is wrong (despite any "core belief"

Like what?

>>Yes. So we're still talking about audio that is in compression. What
>>you have described is the net effect of high gain (Which "expands" the
>>lower level audio), and a limiter clamp which "compresses" the audio
>>to below a preset level.
>
>
>Wrong. The 'net effect' is that gain is higher than average when the
>signal level is lower than average, which is not necessarily due to
>compression because compression does not require (or imply) variation
>of the gain below the knee. You get unintentional downward expansion
>from a compressor when you push the average audio level -above- the
>knee. I remember a pretty good link on the subject -- I'll post it if
>I find it again.

Please do. But we've basically described the same thing. Gain is
inversely proportional to signal level, resulting in a (more or less)
constant output, or an output where the dynamic range is greatly
reduced from the input signal.

>>>>>then you are forced to compensate by decreasing the gain of the mic

>>Hello McFly.
>
>
>Oh gee, that was clever.
>
>
>> The mike limiters are BEFORE the mic gain pot.
>
>
>VR6 controls IC3, right?

No. VR6 is a LEVEL pot after the IC3. The gain of IC3 is fixed and
controlled by R78.

> And the only limiter that affects the audio
>prior to IC3 is the first (hard) limiter, right? So if the audio
>signal is low (because you inadvertently reduced the mic gain by a
>factor of 10) then it will take ten times the audio signal level to
>turn on the first limiter, right?

No. The "first limiter" (referred to as the mike AGC in my manual)
operated independently of the setting of VR6. The only thing which
determines when it "clamps" is the level of audio which appears on the
output of IC3, which is BEFORE VR6. The difference between .5 mV and 5
mV of input is not enough to "hit" the clamp threshold.

> And the second limiter (AMC) comes
>after IC3, right? I guess you -do- need a picture..... oh, but I
>forgot, you -do- have a picture -- it's called a 'schematic'!

Which I have.

>> If I was
>>increasing the level to compensate for the setting of the pot, the
>>mike agc circuit would be compressing the audio. But considering that
>>the real compression does not start until you are in the 200 mV area,

>>that doesn't really apply at all.
>
>
>First, there is no mic AGC circuit. There is the first limiter (hard)
>and the second limiter (AMC).

It is called "mike AGC" in my manual. It performs that function. It limits the absolute output of the mike preamp stage.

>Second, the first limiter kicks in based on the forward voltage drop
>of D20, which (if silicon) will be about 0.6-0.7 volts. And since it
>is affected only by a negative peak, then the first limiter doesn't
>even start working until the audio reaches a level of 1.2-1.4 Vp-p!
>That should give you a clue that its purpose is to limit extremely
>high audio levels, like when the mike is dropped, or some dummy shoves
>the mic in his mouth, burps up some half-digested Kokanee and yells
>"A-U-D-I-O".

There's the glaring difference between book smarts and street smarts. In operation of the radio, the mike AGC kicks in quite noticeably on voice peaks during normal talking. If you have an ear for such things the "bump" is quite noticeable. And no, I'm not mistaking the sound for the AMC, action as it happens when the AMC is disabled.

>Third, the second limiter (AMC) begins working at a level set by VR7,
>which is -supposed- to be 200mV... AT A SPECIFIC FREQUENCY. But you
>screwed up your audio equalization when you turned down the mic gain
>and forced yourself to compensate by moving the mic closer to your
>mouth.

Not at all. I can set it the same at 400 hz or 1Khz.

> Your audio now swings much higher at low frequencies so your
>VR7 adjustment is now useless.

If true the net effect would be that the limiter would clamp harder at lower frequencies, the net effect being a tinny sound.

>You could readjust VR7 by setting the
>sig-gen for a lower frequency that is more characteristic of the
>audio, which would probably make a girly voice sound a little better
>but make a normal voice sound extremely boomy and without presence
>(although it will be clear because the AMC isn't being overdriven).

The AMC is designed to be "overdriven" that's its job.

>But since you didn't readjust VR7 for the changed frequency response
>those low frequencies push the AMC into service much more often than
>desired. And while the AMC is busy dimming the audio level on each low

>your audio sounds like crap.

I really think you need to come out of the classroom and spend some
quality bench time with that radio Frank. Your theories are full of
hot air. They sound good, but that's not what happens in reality.

>I have now explained this twice. Is your electronic theory so bad that
>you need it explained to you a third time?

The problem is that your "theory" is exactly that. You are basing
your claims on what should happen according to what you've been
taught. I'm basing my claims on years of observation and hands on
experience.

>>And you are assuming that we are talking about the stock dynamic hand
>>mike. Most people run amplified desk mikes, which is a whole different
>>kettle of fish.

>That's why most amplified mics sound like shit unless they are turned

>>>audio sounded "mushy and compressed" is because you misaligned VR6.
>>
>>Not it's not,
>
>
>YOU said it, not me.

I never said that the reason for the compressed bandwidth was due to
the adjustment of VR6 (A user control on the Cobra). You made that
claim. A claim that you wouldn't make if you had any long term
experience with that radio.

>>I made the radios sound good for the people who used them. They're
>>paying the bill, so they get what they want.
>
>
>So that's your new excuse? You snip the filter because that's what the
>customers want?

Is there a better reason to conduct business? Ever hear of the term
"The customer is always right"?

In later years I attempted to dissuade people from "clipping" and
"peaking", but if they insisted, I'd do it anyway. They'll get it done
one way or another. I might as well be the guy profiting from it.

>>>And for the record, the filter between TR20 and TR22 is a low-pass

>
>If you are running AM then the audio will be distorted when modulating
>the final because you are very likely going to push it past 100% on
>the low frequency peaks (remember that VR7 is misaligned due to poor
>audio equalization).

Your theory, not true in practice. If the limiter is adjusted for 1
Khz, and a 400 Hz note comes in which is stronger the limiter simply
clamps it down. The limiter doesn't care what frequency the audio is.
It clamps on LEVEL. The net effect may be that the equalization may
get skewed, but it won't be overmodulated because the limiter will not
allow it.

>If SSB then the modulated IF most certainly
>-does- pass through the crystal filter since that's how you extract
>SSB from the DSB output of the DBM

We're not talking about SSB Frank. Trying a diversion to cover your
obvious crystal filter mistake for AM is not going to fly.

>>input of the stage. I'd say that fits the definition of controlling
>>gain.
>
>
>You may actually have a point there if the audio is attenuated for at
>least one full cycle.

The time constant of the R/C provides for a fast attack, slow decay.
So I'd say that many more than 1 cycle is attenuated.

You need to do that anyway. Unless a bucket brigade audio delay is
employed, any limiting action will occur after the fact. The very
first peak, which overmodulates the radio (and trips the limiter) is
gone by the time the limiter responds to it. That is why the slow
decay, and that is why AMC's are normally set conservatively at 85%,
so that less small peaks "escape".

>>>'Compression' is a type of AGC; i.e, the output signal controls the
>>>gain of the amp. A CVA (Constant Volume Amplifer) is a type of
>>>compression that is commonly used in the broadcast industry for
>>>speech. Compression works by controlling the average level of the
>>>audio, not by limiting the peaks.
>>
>>In either case, the overall gain of the stage is controlled. Whether
>>you actually vary the gain of the amplifier, or you shunt some of the

>output level is detected and used to clip, or -distort- the wave. If
>the output level was detected and used to control the -gain- then it
>would be compression. But that's not what's happening here.

There's clipping and there's variable attenuation. Variable
attenuation does not distort the wave.

>>Again, you like to argue semantics.
>
>
>Again, you whine about semantics whenever your understanding is proven

Nope Dave, again your wrong.
THE whole point was that You said you can not get a
ticket for 1 MPH over the speed limit. You then added
another variable to the mix by saying in Pa.
Now you say it can be applied across the board for the state?

www.atssa.com/chapters/downloads/PA_ImpAct229.PDF

You can be ticketed in the state of Pa for 1mph over the speed limit,
so will you know shut up on it?

The whole point is that you can be cited dude, not that
it happens everyday or even once a month, but you can be
cited even in your state.

Some people play crossword puzzles. Some play chess. Some build
projects. Some take a course in a local college for the fun of it.
They are all challenges in their own right. But they are also
recreational.

Some people's idea of recreation is to totally unplug and turn off
their mind. Others just change the venue of their challenges.

Galaxy has a reputation for "pushing the limit" when it comes to
radios and their legalities. Just look at their list of "export"
radios. The fact that most mainstream radios did NOT have such a
feature was enough for me to remain suspicious. I was also informed by
an FCC official 20-some years back that they considered any "tone or
noise" not specifically addressed in 95.412 (b) to be illegal.
Obviously that feeling is no longer true, but it was the basis for my
initial feeling on the subject.

But I stand corrected now.

Democracies & double standards
By Patrick J. Buchanan

Posted: February 23, 2005
1:00 a.m. Eastern

"Magnanimity in politics is not seldom the truest wisdom; and a great empire and little minds go ill together," Edmund Burke admonished the haughty rulers of the British Empire of his time.
Our American empire is suffering from a similar want of wisdom and plenitude of the hubris that cost George III his 13 colonies.

Consider how this generation of politicians is undoing the great work of Ronald Reagan. When Reagan took office in 1981, the Soviet Union of the aging autocrat Leonid Brezhnev was an "evil empire" that stretched from the Elbe to the Bering Sea with thousands of nuclear warheads targeted on the United States. The Red Army had recently occupied Afghanistan, and Moscow had established imperial outposts in the Middle East, Africa, the Caribbean and Central America.

Yet, the year Reagan departed, 1989, the Soviet empire threw open its prison gates, released the captive nations of Eastern Europe, then peacefully dissolved itself and let 14 republics, many of which the czars had ruled for centuries, become free and independent states. Gorbachev, Yeltsin and Putin became strategic partners of American presidents. For once communism had been exorcised from Russia, there was no ideological, ethnic or territorial conflict between us. For we live on different continents in hemispheres separated by the world's largest oceans. Moreover, Russia belongs with the West. As Solzhenitzyn wrote, Mother Russia was "the first captive nation."
Both of us also have a vital interest in balancing off a rising and possibly revanchist China and resisting an Islamic fundamentalism that seeks to drive Russia out of the Caucasus and America out of the Middle East.

Thus, as there is no relationship more critical to the security of the West than that between Washington and Moscow, it is with near-despair that one reads the front-page story in the Washington Times: "Senators Seek to Sanction Russia: Say Putin Acts Autocratically."
Who are the senators? They are those twin protectors and proctors of global democracy, Joe Lieberman and John McCain, and they want Putin

sanctioned by having the world's industrial democracies, the G-8, suspend Russia's membership, which would be an insult and humiliation.

Putin's crimes? Says McCain: "Mr. Putin has moved to eliminate the popular election of 89 of Russia's regional governors, has cracked down on independent media, continued his repression of business executives who oppose his government and is reasserting the Kremlin's old-style central control." Says McCain, "The coup is no longer creeping ☐ it is galloping."
But a question arises: Why are these internal matters of the Russian republic any business of

John McCain's? Putin is the elected president of Russia. Who elected McCain to anything outside of Arizona?

During our Civil War, Lincoln blockaded Southern ports without the approval of Congress, suspended habeas corpus, sent troops to prevent a free election in Maryland, sought to arrest Chief Justice Roger B. Taney, shut down newspapers, shot down rioters on the streets of New York and made himself dictator of the Union. Was that any business of the members of Britain's House of Lords? Just who do we Americans think we are?

Whether Russia's governors are elected or appointed is none of our business. As for the jailing of oligarch Mikhail Khodorkovsky, or any of the others in that den of thieves, that is no more our concern than TR's smashing of the trusts or Truman's seizure of the coal mines or Bush's incarceration of Martha Stewart was or is any of Russia's business. As for President Putin acting "autocratically," can Sen. McCain recall when Russian rulers have acted any other way?

Why are McCain and Lieberman bullyragging Russia but not China? After all, Putin was elected, but Hu Jintao was not. Russia has an elected legislature with opposition parties. China has never held a free election. The Russian people have freedom of religion. China persecutes Christians. Russia threatens no U.S. ally. China threatens Taiwan. In a recent issue of Parade, a list was drawn up of the world's 10 worst dictators based on their human-rights violations. Hu Jintao was fourth from the top. Putin was not even mentioned.

If Russia is to be insulted by being kicked out of the G-8, why not adopt a single standard and remove Most Favored Nation trade status from China, which enabled her to run up a $160 billion trade surplus last year at our expense?
Since Reagan achieved the rapprochement with Russia, the United States has pushed NATO up to her borders, bombed her ally Serbia for 78 days, interfered in elections in Georgia, Ukraine and Belarus, and begun a pipeline to cut Moscow out of the Caspian oil trade.

Now, Russia is now going her own way: selling SAMs to Syria, AK-47s to Venezuela, missiles and fighter aircraft to China and aiding Iran in completing its first nuclear power plant.

Of this generation of leaders, it may be said in epitaph: They were too small to see the larger world. They frittered away in a decade what others had won in a half-century of perseverance in the Cold War.

Democracies & double standards
By Patrick J. Buchanan

Posted: February 23, 2005
1:00 a.m. Eastern

"Magnanimity in politics is not seldom the truest wisdom; and a great empire and little minds go ill together," Edmund Burke admonished the haughty rulers of the British Empire of his time.
Our American empire is suffering from a similar want of wisdom and plenitude of the hubris that cost George III his 13 colonies.

Consider how this generation of politicians is undoing the great work of Ronald Reagan. When Reagan took office in 1981, the Soviet Union of the aging autocrat Leonid Brezhnev was an "evil empire" that stretched from the Elbe to the Bering Sea with thousands of nuclear warheads targeted on the United States. The Red Army had recently occupied Afghanistan, and Moscow had established imperial outposts in the Middle East, Africa, the Caribbean and Central America.

Yet, the year Reagan departed, 1989, the Soviet empire threw open its prison gates, released the captive nations of Eastern Europe, then peacefully dissolved itself and let 14 republics, many of which the czars had ruled for centuries, become free and independent states. Gorbachev, Yeltsin and Putin became strategic partners of American presidents. For once communism had been exorcised from Russia, there was no ideological, ethnic or territorial conflict between us. For we live on different continents in hemispheres separated by the world's largest oceans. Moreover, Russia belongs with the West. As Solzhenitzyn wrote, Mother Russia was "the first captive nation."
Both of us also have a vital interest in balancing off a rising and possibly revanchist China and resisting an Islamic fundamentalism that seeks to drive Russia out of the Caucasus and America out of the Middle East.

Thus, as there is no relationship more critical to the security of the West than that between Washington and Moscow, it is with near-despair that one reads the front-page story in the Washington Times: "Senators

Seek to Sanction Russia: Say Putin Acts Autocratically."
Who are the senators? They are those twin protectors and proctors of global democracy, Joe Lieberman and John McCain, and they want Putin sanctioned by having the world's industrial democracies, the G-8, suspend Russia's membership, which would be an insult and humiliation.

Putin's crimes? Says McCain: "Mr. Putin has moved to eliminate the popular election of 89 of Russia's regional governors, has cracked down on independent media, continued his repression of business executives who oppose his government and is reasserting the Kremlin's old-style central control." Says McCain, "The coup is no longer creeping - it is galloping."
But a question arises: Why are these internal matters of the Russian republic any business of

John McCain's? Putin is the elected president of Russia. Who elected McCain to anything outside of Arizona?

During our Civil War, Lincoln blockaded Southern ports without the approval of Congress, suspended habeas corpus, sent troops to prevent a free election in Maryland, sought to arrest Chief Justice Roger B. Taney, shut down newspapers, shot down rioters on the streets of New York and made himself dictator of the Union. Was that any business of the members of Britain's House of Lords? Just who do we Americans think we are?

Whether Russia's governors are elected or appointed is none of our business. As for the jailing of oligarch Mikhail Khodorkovsky, or any of the others in that den of thieves, that is no more our concern than TR's smashing of the trusts or Truman's seizure of the coal mines or Bush's incarceration of Martha Stewart was or is any of Russia's business. As for President Putin acting "autocratically," can Sen. McCain recall when Russian rulers have acted any other way?

Why are McCain and Lieberman bullyragging Russia but not China? After all, Putin was elected, but Hu Jintao was not. Russia has an elected legislature with opposition parties. China has never held a free election. The Russian people have freedom of religion. China persecutes Christians. Russia threatens no U.S. ally. China threatens Taiwan. In a recent issue of Parade, a list was drawn up of the world's 10 worst dictators based on their human-rights violations. Hu Jintao was fourth from the top. Putin was not even mentioned.

If Russia is to be insulted by being kicked out of the G-8, why not adopt a single standard and remove Most Favored Nation trade status from China, which enabled her to run up a $160 billion trade surplus last year at our expense?
Since Reagan achieved the rapprochement with Russia, the United States has pushed NATO up to her borders, bombed her ally Serbia for 78 days, interfered in elections in Georgia, Ukraine and Belarus, and begun a pipeline to cut Moscow out of the Caspian oil trade.

Now, Russia is now going her own way: selling SAMs to Syria, AK-47s to Venezuela, missiles and fighter aircraft to China and aiding Iran in completing its first nuclear power plant.
Of this generation of leaders, it may be said in epitaph: They were too small to see the larger world. They frittered away in a decade what others had won in a half-century of perseverance in the Cold War.

Until this mystery source is cited and ascertained, that's exactly what it is..hearsay.

>here or no web sites. Just actual proof, other

>than signed active work zones or school

>zones these law are it.

It's not proof because you say so, but let's assume it is, just for the sake of the thread. Your statement above absolutely contradicts N3CVJ's claim that one CAN NOT BE CITED for speeding 1 MPH over the limit in Pa. You deftly illustrate the circumstances where one can be cited for such an infraction. Staying with assumptions, it would be safe to assume David T. Hall Jr. knew nothing of the law regarding these exceptions, therefore, he insists such does not exist, effectively contradicting one of his favorite claims that "absence of proof is not proof of absence".

@newssvr13.news.prodigy.com:
You can be ticketed in the state of Pa for 1mph over the speed limit, so
will you know shut up on it?

>Only in a "signed" active work zones.

Hahaha,,,,feel better? Now that you have been properly informed, you
have reversed your position and original claim (flip flop :). The "how"
is irrelevant to your claim that one could NOT be ticketed in Pa. for
going 1 MPH over the speed limit. You were told they most certainly
could, you made some a few personal insults, were whacked with truth and
logic, and here you are hanging your head, admitting your goof, and
trying to invoke special conditions to what was your original claim
"after" the fact. Smile. That portrait of you hanging in the cb
rec.radio.cb online museum of infamy underneath your rotting
roof......ah. never mind. Just enjoy the ride you've on which you've
been taken and you won't be so bitter about all your google names being
fired by the group.

>If the signage isn't erected in the stated

>fashion, no dice.

IF the queen had balls she would be king, but no dice, and if you had
balls, you wouldn't still be underground where you were driven.

It was early morning when they untied him, and
carried him to a soft bed, where he was washed and
allowed to rest. When Mike awoke the next morning,
the three men were awaiting him, hard dicks in
hand, and bowels full of a mess that needed a warm
mouth to harbor it.

Hmmm i guess my Icom general coverage radio should bypass the 40 regular
then... What a bizarre statement that "ham radios are not supposed to
talk on CB band". Care to back that up?

3345. CB REPAIR & MODIFICATION BOOKS AT 40% OFF

Newsgroup: rec.radio.cb
Date: 2005-02-28 02:28:09 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <md0521ps4e65fo0nivr97vtfannkri0jqh@4ax.com>
Source record: 196985

To learn the technical TRUTH about CB Radio without all the hype from people who are just plain ignorant, check out the following books from CBC International. They're selling right now at a big discounts on our EBAY & AMAZON stores too.

Check it out!

To see exactly what these books look like, plus all the specific, chapter-by-chapter details, see our Web at:

www.cbcintl.com

Some of the books included are:

BOOK #1: THE "SCREWDRIVER EXPERT'S" GUIDE To Peaking Out & Repairing CB Radios. List $25. The most popular "big dummy's" guide ever published on do-it-yourself CB repairs & modifications. Covers peaking of receivers, transmitters, modulation, mike problems, antenna & SWR problems, detailed frequency modifications for both crystal & PLL radios. Loaded with charts, illustrations, and specific instructions for most brands including the new export models. This latest edition also covers slider and broadbanding tricks, FM conversions, and much more!

BOOK #2: THE CB PLL DATA BOOK. List $20. The only complete reference source on CB PLL synthesizer circuits ever published! Detailed PLL theory explained in layman's terms. How they work, and how to modify them for many more channels. Includes specific PLL block mixing diagrams, truth charts, & IC pin function diagrams for nearly every PLL chip ever used. Covers all the most popular U.S. & export chassis, with specific listings of all models using the chip.

BOOK #3: UNDERSTANDING & REPAIRING CB RADIOS. List $42. Giant 370-page technical book for the professional repairman. Picks up where the "SCREWDRIVER EXPERT'S" GUIDE leaves off. Includes circuit descriptions & troubleshooting guide for 23- & 40-Ch., crystal & PLL, solid-state & tube, AM, FM, SSB, CW, American & export models. Covers test equipment (& where to find it), transistor basics, synthesizers, receivers, transmitters, power supplies, T/R switching, antennas, interference, parts & accessory sources. Over 350 illustrations including schematics, charts, and photos. Huge subject index also lets you look up repairs by symptoms. This is "must" reading for any serious CB technician!

For details on our Galaxy-Ranger Service Manual (2nd Ed.) go to:

www.cbcintl.com/galaxy.htm

SAVE MONEY! We regularly run EBAY auctions in which you can save up to
HALF the cost of our most popular CB books and accessories. To see

We've now added all our crystal charts for free download/printing
(PDF) on our site. These 36 charts cover about 95% of all American
mobile & base CB models, and show exactly which crystal(s) affects
which mode or channel. Very useful for troubleshooting "dead
channels" symptom, or for modification to 10M or other freqs.

Check 'em out at: www.cbcintl.com/xtals/xtals.htm

We specialize in CB books, plans, kits, and high-performance CB
accessories. Please visit our Web site to see all those "goodies" you
just can't find anywhere else!

3348. FREE! "THE CB EPROM DATA BOOK" OF FREQ. MODS

Newsgroup: rec.radio.cb
Date: 2005-02-28 02:28:21 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <4e0521d8j82csp4c4grtfnvlplaef5bqfo@4ax.com>
Source record: 196988

FREE!!

For advanced techs and serious radio hobbyists, we're now offering a FREE copy of our previously published "CB EPROM DATA BOOK" by Martin Pickering. (EPROM = Erasable Programmable Read Only Memory.) We sold it for many years but it's now out of print. This little manual of 60 illustrated pages is an absolute GEM of CB technical knowledge you'll just never find anywhere else. And it's yours for FREE from our Web site.

This book reveals the secrets of advanced channel programming, and picks up where our "CB PLL DATA BOOK" (www.cbcintl.com/pllbook.htm) leaves off. You'll get a thorough background in how these amazing programmable chips can be used to modify many popular CB PLL circuits for expanded frequency coverage. Covers the basic programming techniques, and even includes real PC board artwork for making EPROM circuits. Sample artwork includes EPROM boards for the popular MB8719, PLL02A, ï¿½PD2824, and ï¿½PD858 PLL circuits.

Best of all, the price is right--namely, FREE! Download your FREE copy of "THE CB EPROM DATA BOOK" (948 KB Adobe PDF) at:

www.cbcintl.com/docs/EpromBook.htm

Don't forget to check out all our other CB specialty books, plans, kits, & high-performance accessories at:

www.cbcintl.com

SAVE MONEY! We regularly run EBAY auctions in which you can save up to HALF the cost of our most popular CB books and accessories. To see what's currently on sale, double-click the line below:

oh i like it. but if i kiss you. i guarantee, you will come home.
> again exploded in my mouth. i gave them both a log wet kiss as their
> fuck juices mixed in my mouth and they tasted themselves.
steveo don't realize i am the 1999 agitation.or figures i jus wwalked away.
so dug comes along and rips your tea shirt off you. thewnhe just licks your
left nipple and says "g daybuddy"
so do you want more or less?

u r california correct
if marty from san diego is still about, he will go beyond vouch for me
club owner the last i know
nope won't really permit that
he can have a party if he likes. Edmonton, entwhistle, edson is not half the
trip.
sex til u had it?
well some guys are just so good

nope just sent the stanley cup back to gov general, fedex collect.
as the only onther year not played was causing the spanish flu and killed
thousnads in cnada. i see you have no rights to steal the stanley cup.
if u need to steal the cup so be it

i declare the stanley cup as invalid forever

my name is doug stevenson
i declare a new cup be made
the lord stanley cup
for the best of the hockey athletes in canada

this is not a discussion for mere pilgrims of MY professsional hockey
read the history of the lord stanley cup

i think u forgot to delete the gay sites
from oversite
speaking as an electro tech
you have no problem of your antennae coverage
unless u figure 50 foot differenece is gonna be big time

i promise i will put my unit in the van sometime.

have a good time the guys on radio
anyway

now will you please fuck off and have a good life

dug88

how can you in all ethical concepts believe you are that high up.

yes as trash you had a word or two end enjoyed it and envibed the joy of it.
as to the tenacity of it. have you and yours enthralled yourselfves of the
joy of being the special NOTARIES.
tell ya what dude i will make it easy on you
i will explain it to you
a few thousand years ago a guy was nailed to a cross and took all of the
blame of the world on his shoulders.
HOWEVER, i am the son of god.

I shall soon expect to die. I am telling you you face death from sticking death in the stars.
you employ idiots or trolls who even sleep in, on a day.
deices hurtling at thousands of miles an hour. men who are slightly off, 10 minutes a day. someone, whoever the fuck that could be on this planet. is upset.
maybe a canuck or american. "LET'S fire a nuke".

okay jack ass
here is the truth
"IF THIS PLANET EVER FIRES OFF ONE NUKE, THEN ALL NUKES WILL BE FIRED OFF."
THIS IS THE expiration of a species
the human species

enough nuclear devices exist and are completely capable of stopping all life on this planet.
nothing would exist not even bacteria or yeasts.
i am like every other son of god.
we live. we die.

the shroud of death is not a good thing to put on this planet
your generals are insane?

kil me, it will make u feel better

saves me seeing your .....

N3CVJ David T. Hall Jr. wrote:
>Ok so this should just about end the

>discussion, this was sent to me by request

>from a Administrative Leo.

A claim by yourself of a mystery administrative leo telling you anything is third-hand hearsay.
Until this mystery source is cited and ascertained, that's exactly what it is..hearsay.

>Don't worry about the mystery source,

David T. Hall Jr. (N3CVJ) invoked this mystery source, not I. Your chin appears to be getting caught under my heel, again.

_
It's not proof because you say so,

>It is proof because the Pa commonwealths

>statutes are stamped all over it, your

>communicaTION DEFICIT PRECLUDES YOU
>FROM SEEING SUCH AS IT IS

Only David T. Hall Jr. has been wrong on every issue.

_
but let's assume it is,

>Assume all you want, that is your normal SOP

just for the
sake of the thread. Your statement above absolutely contradicts N3CVJ's claim that one CAN NOT BE CITED for speeding 1 MPH over the limit in Pa.

>Perhaps you can show us in the documents I

>posted where it says that?

Perhaps you can ask another, as everyone has long tired of explaining whta they mean to you and reminding you of your poor memory.

–
You deftly illustrate the circumstances where one can be cited for such an infraction.

>The funny part is your and frank's arguement

>never hinged upon this obscure fact that has

>been presented.

The only thing that is funny is the manner in which you attack myself, Frank, and anyone else that illustrates David's hypocrisy and bullshit.

>Until an actual passage from pa code is

>presented it is hersay to speculate the exact

>meaning of the law.

Hearsay is everything Hall has presented and attributed as fact because a mystery leo source "told" him so

–

David T. Hall Jr. knew nothing of the law regarding these exceptions, therefore, he insists such does not exist, effectively contradicting one of his favorite claims that "absence of proof is not proof of absence".

>Well tipsy,

Your feelings of shame are increasing day by day. It really upsets you to not who who the hell it is bouncing your head off the wall.

>frank nor yourself knew of these exceptions

>until Landshark brought them to light,

What Frank and myself knew, was exactly what you have been taught since then...that there exists no requirement saying Pa State Officers must give a window of 5 MPH to all speeders..that was David T. Hall's :) claim, and you are bleeding from the ....uh..gums trying to manage some sort of damage control for his regular idiocy.

>and yet so far there has been no law posted

>by anyone stating the exact exception and any
>limitations.

You asking for a law that disproves David T. Hall Jr.'s misinterpretation of the law.

>In fact the article landshark posted did indeed

>state there are tolerances which i clearly

>demonstrated with my follow up document.

Stay with the topic, no matter how painful it is to have your ears pinned and tail cropped at a time like this. No one ever took issue with tolerances,..in fact, only you are invoking such a topic to try and obscure David T. Hall Jr.'s screwups. It was he that claimed that a 5 MPH tolerance was mandatory in Pa for all speeders. You begging for someone to show a law to disprove your incompetence and misinterpretations is but a bonus to the freak show you have been forced to live.

right me old Hubert, don't know what the grief is for? The bloke asked a simple antenna question!

If you take and erect at ground level, two 1/4 wave vertical antenna elements,
spaced 1/2 wavelength apart.
Install a good radial earth.
Fit both vertical elements with 1/4 wavelengths pieces of 50 ohm coax cable,
Take both cables to a, 2 female / 1 male, pl259 T piece, in the middle at 1/4 wavelength .
The T out cable goes to rig.
Then take a 1/2 wave piece of coax with a PL female plug on one end, and a male on the other.
Insert this 'stub' between the vertical element and the T piece.
this make one side of the array feeder, 1/2 wavelength longer, making it 3/4 wavelength,
this will alter phase and direction from end fire, to broadside.

Clear as mud?
